Finally, the bank tacks on the spread, the third component of the pricing formula. Spreads on Libor loans vary from one to three percentage points over adjusted Libor and average about 200 basis points. By contrast, spreads on prime-based loans average only 100 basis points over the administered rate.

The net result is that the unwary borrower ends up with approximately the same or even a somewhat higher loan charge with a Libor option as he would with a prime option. Although he would seem to be better off tying his loan price to the cheaper Libor rate, in practice, after the bank has manipulated the Libor base, the adjustments to that base, and the spread, the advantage evaporates.

Concludes Mr. Ertefai: "When corporate borrowers have a Libor option, it is always in their interest to negotiate all the fine pricing details before finalizing a deal. The borrower needs to know how the Libor index is being defined in his particular loan agreement, where the current values of the index can be found, as well as when and how the index is calculated.

"Cutting through the Libor pricing maze, particularly in the absence of standard market practice, isn't easy. Yet savvy corporate borrowers are gradually finding that even a little probing into that intricate web can save them a substantial amount of money."

□ □ □

Bert Ely, a Virginia-based consultant who has achieved a certain amount of celebrity for his one-man effort to measure the cost of bailing out the savings and loan industry, recently went before Congress to vent his 1987 numbers. As of yearend, said Mr. Ely, some 853 insolvent thrifts were a total of approximately $64 billion in the hole.

That is, the true value of the assets of these associations fell $64 billion short of the worth of their liabilities. Otherwise stated, private investors would probably insist on a check for approximately this amount before agreeing to assume liability for the stricken institutions.

The consultant's estimate, which is somewhat, though not appreciably, higher than that of other analysts, represents a simple average derived from two different approaches to measuring valuation. One approach directly marks down the book value of thrift assets to their more realistic market value.

For example, Mr. Ely identifies excess ratios of accrued interest to gross mortgage and nonmortgage loans. Such outsize accruals obviously betoken high levels of nonperforming assets, whose true value is much below the stated value based on historical cost. The consultant proceeds to mark down the affected assets accordingly.

The other methodology assesses valuation by capitalizing the gross income stream of the stricken thrifts. That is, it divides reported interest income by a capitalization factor or discount rate. The basic capitalization rate is a weighted average of the cost of debt, net of the deposit premium currently being paid by thrifts, the cost of equity (assuming a price-earnings multiple of six) and the net overhead cost.

This basic capitalization rate is adjusted — both up and down — by a number of factors. The principal upward adjustment is for excess yield — that is, yield over and above that produced by the so-called good thrifts, the three-fifths of the industry that is currently solvent. It is assumed that this yield represents high-risk or even phantom income and that, in consequence, the assets generating such yield must be financed with higher-cost debt and/or equity.

The first valuation approach — the direct markdown methodology — yields a negative net worth (excess value of liabilities over assets) of $53.6 billion at the 853 insolvent associations. The second method — the capitalized-income approach, which is quite similar to the income method for valuing commercial real estate — produces a negative net worth at these same thrifts of $73.4 billion.

The fact that the income approach yields a lower value for the assets than does the direct markdown method may reflect the depreciation of the portfolio of mortgage-backed bonds. Since the Federal Home Loan Bank Board does not collect data on the current value of thrift investments, it is difficult to directly measure this depreciation. However, its impact should show up in a reduced income stream, and so the valuation loss would ordinarily be captured by a straightforward income-capitalization method.

Mr. Ely offers a breakdown of losses, the average derived from the two valuation methodologies, by individual thrifts in the various states. Thus, thrifts in eight states have estimated valuation losses of over $1 billion. Texas thrifts, of course, have more losses by far than institutions in any other state.

The estimated negative worth of insolvent institutions in that state amounts to $30.2 billion. That is, in Texas, losses represent a staggering 30% of total thrift assets, as defined under regulatory accounting policies.

Losses in California total $9.4 billion, while those in both Illinois and Florida are estimated at about $2.3 billion. The other four most affected jurisdictions — New York, Louisiana, Oklahoma, and Arizona — have losses ranging from $1.2 billion to $1.6 billion.

Since the federal government is profoundly disinclined to part with the approximately $64 billion necessary to resolve the thrift crisis, Mr. Ely adds a chilling postscript on the costs of procrastination. The accumulated thrift loss, he contends, is growing at a rate of at least 15% annually before taking into account the monies spent selling or liquidating insolvent institutions. This 15% reflects the interest and overhead costs of continuing to finance impaired assets, together with a projected 1% annual deterioration in the value of these assets.

Such a 1% deterioration rate is perhaps overly optimistic. Should the assets of the stricken institutions decline in value by 2% a year rather than 1%, the overall cost of carry would rise from 15% to closer to 21%. And if interest rates should rise, the cost of carry would likewise move up.

The fact that this year's $64 billion problem can quite easily become next year's $75 billion problem strongly argues for a prompt and efficacious solution to the insolvency issue, however painful and costly that solution might now appear. ■

BRIEF COMMENT

The Fight Against Fraud in FDIC-Insured Banks

L. William Seidman, chairman of the Federal Deposit Insurance Corp., offered the following comments on the financial condition of FDIC-insured institutions to the Senate Committee on Banking, Housing, and Urban Affairs on May 25.

□

WITH regard to the role of fraud and insider abuse in bank failures, we believe that such misconduct contributed significantly to about one-third of the bank failures in 1986, 1987, and so far in 1988. Outright criminal conduct was responsible for 12% to 15% of bank failures.

For example, from January 1985 through 1987, 98 of the 354 banks that failed were cited by examiners as having at least some element of fraud or insider abuse. Those 98 failed banks had assets of $2.7 billion and cost the FDIC nearly $676 million. Our experience since 1985, however, suggests a somewhat lessened impact of fraud and abuse compared to the late 1970s and early 1980s.

The FDIC recognized a need to strengthen efforts to deal with fraud and abuse and has taken several major steps since 1984 to improve the situation. We published a list of time-tested "red flags" and other warning signs of fraud and abuse to be used as an aid to examiners and auditors. We designated some 60 examiners as bank fraud specialists to be given specialized training in bank fraud and insider abuse.

Later this year, an intensive, highly specialized training session will be held for these examiners. It will focus on criminal motivation, early detection, and investigative techniques. Other training courses for examiners and liquidators have been developed or improved. ■

Japan Dominates in Deposits; US Banks Fall from Top 25

➻ Continued from Page 1

Kenneth Galbraith, economist at Harvard University. "The success of the Japanese banking industry reflects the success of that decision. It's a lesson that we should take to heart."

While some expressed hope that the news might spur Congress to consider more liberal banking legislation, most sought to downplay the significance of the figures, noting the effect of currency fluctuations. From Sept. 30, 1986, to March 31, 1988 — the two points of comparison for the Japanese bank data — the yen appreciated 22% against the dollar.

In addition, they noted, Japanese banks have a larger deposit base from which to draw, as the largest firms are national banks. U.S. banks are limited geographically, either by state or by region.

Bigger Isn't Necessarily Better

Others said the ranking fails to capture the most significant difference between U.S. and Japanese banks — the strategic emphasis on profits versus size. While size has always been important to U.S. bankers — and to varying degrees remains so — they have shifted their focus toward improving return on assets and return on equity, concepts the Japanese have only begun to embrace.

The difference will take on more significance going forward as international banks position themselves to meet risk-adjusted capital guidelines ratified last week by the central banks of 12 industrialized nations.

> 'It doesn't bother me in the slightest where we rank.'
>
> — **Walter Wriston**
> **Former Chairman**
> **Citicorp**

"The Japanese are winning at the wrong game," said Walter Wriston, former Citicorp chairman. "They get the flowers for growth but the flunky marks for earnings. The only thing that matters is earnings. Our assets didn't grow because we didn't wish them to grow."

Citicorp's assets rose 3.7% through 1987, compared to more than 20% (in yen terms) at the large Japanese banks.

Historically, Japanese banks have pushed for asset growth above all else, paying little attention to profitability ratios.

"After World War II, the country had a shortage of funds and credit demand was strong," said Yoshindo Takahashi, president of Nomura Research Institute. "That's when the emphasis began on expanding assets and market share."

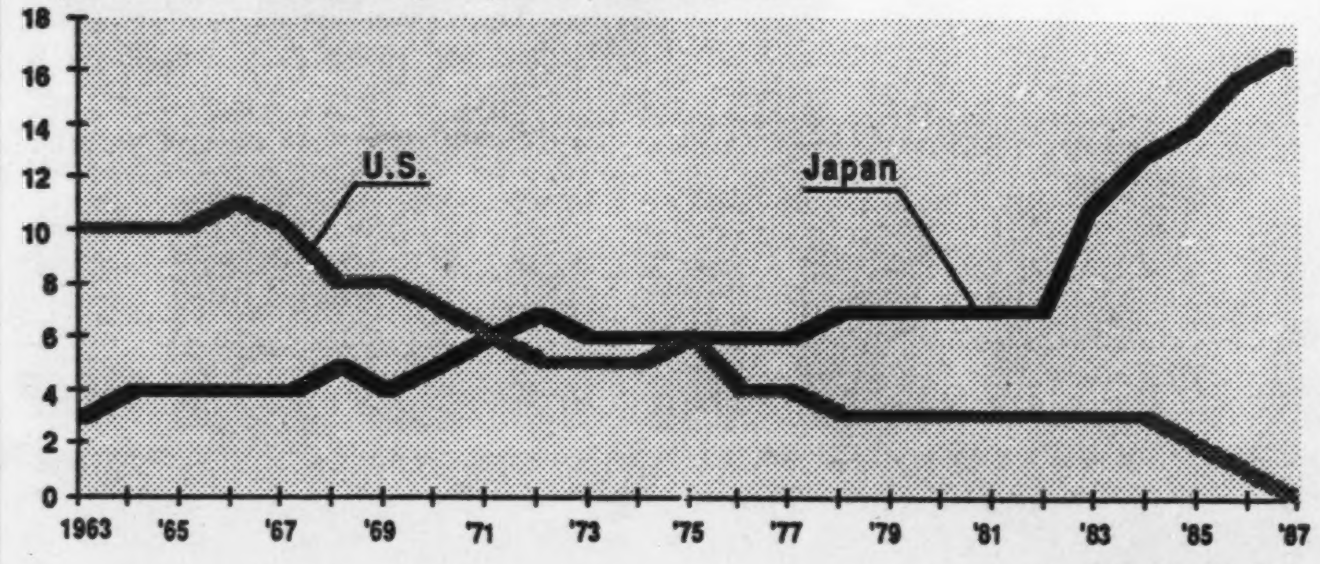
To control asset growth, the Bank of Japan set a series of policies that are still in force today. Each quarter, for example, the central bank establishes a ceiling for loan growth at the nation's largest banks.

The ceiling is dependent on size, with the largest banks given the highest cap. If a bank fails to reach its quarterly ceiling — essentially a growth target — the figure can be reduced for the next quarter, relative to the bank's peer group.

Given that incentive, Japanese banks have pursued growth aggressively, lending on thin margins to gain market share, and building massive operating networks both domestically and abroad. With greater market share in hand, analysts eventually expect the Japanese to begin raising prices and driving up profits — something the current strategy has not maximized.

Like Two Ships Passing in the Night

Japanese domination of top 25 pushes out US banks



Source: American Banker

For the fiscal year ended March 31, 1988, the nation's 13 money center, or "city," banks, returned less than 0.2% on their assets, according to *Nikkin*, a Japanese banking publication. By contrast, the top nine U.S. banks averaged a 0.58% return on assets in 1986. (Most U.S. money centers reported a negative ROA for 1987 due to their special reserves for Third World loans.)

"Growing assets or liabilities doesn't make sense in the current regulatory environment," Mr. Wriston said. "So it doesn't bother me in the slightest where we rank.

"If the game is trying to earn money, they're not so hot. And it's difficult to switch people's views from assets when that's how you've managed the business."

With the fiscal year beginning this April, however, the top Japanese banks have formally dedicated themselves to improving profitability, each making an announcement to that effect. The shift is prompted in large measure by the upcoming capital guidelines, which will require banks to increase their capital levels to 8% of assets by 1992. Of that 8%, half must be comprised of shareholder's equity, retained earnings, and noncumulative perpetual preferred stock.

Given the huge asset base of the top firms — Dai-Ichi Kangyo had $345 billion at March 31 — analysts say the Japanese will have to ease asset growth and generate more earnings in order to meet the required ratios in four years.

As Mr. Wriston noted, however, old habits die hard. When Japanese bankers talk of their newfound emphasis on profits, they do so in the context of asset growth.

"For the last two years, we've been trying to stop building up assets with thin-margin loans and looking to improve profitability," said banker with the Sanwa Bank Ltd., who asked not to be named. "In the old days, we weren't so eager to collect fees either, but that's changing.

"For the next three to four years, we'll slow our asset growth to 10% a year [from 27.3% last year in yen terms]. We think we can sustain 10% growth and still make the ratios."

Bred-in-the-Bone Love of Bigness

Masaru Kakutani, associate director for Moody's Investors Service, said, "The Japanese banks have a physiological preference for larger assets. You talk to them and they say profitability is becoming more important, but you look at what they do and it hasn't really changed."

In yen terms, the Japanese banking industry saw deposits grow by 13.6% from yearend 1986 to yearend 1987, according to figures from Dai-Ichi Kangyo Bank. Most of the increase was attributable to the deregulation of interest rates on large-denomination deposits, which grew 23.9%.

Also significant, Mr. Kakutani said, was the placement of deposits by U.S. regional banks and small European banks. Deposits from financial institutions, which made up 8.5% of the Japanese industry's total deposits, grew by 23% last year.

And as always, Japanese banks reaped the benefits of their nation's cultural penchant for savings. The average Japanese family saves 20% of its disposable income, compared to about 3% in the U.S., according to the Keizai Koho Center, a research institute. Consumer deposits — some 41% of industry total — increased 10.3% last year, and they could grow even more this year, if Japan decides to deregulate consumer deposit rates this fall.

Despite their rapid growth, Mr. Kakutani believes that Japanese banks "have a better chance than many people think of keeping a 10% growth rate and still making the requirements. It will get more challenging for them, but the equity markets would always be receptive," he said.

Given their substantial investment portfolios and real estate holdings — all booked at prices well below market — the Japanese banks have a wealth of hidden reserves available, a fact not lost on investors. Japanese banks have the highest market values in the world, all with share prices several times their respective book values.

The Sumitomo Bank Ltd., whose market valuation ranks top among all banks, trades at approximately 95 times earnings. The average U.S. money center bank trades at five to six times earnings.

As such, the equity markets have expressed their receptiveness to any issue of new Japanese bank shares, enabling those banks to raise their capital ratios with minimal dilution. The return on equity may be lower at Japanese banks than at U.S. firms, but then, stockholder pressure for profits is also lower. Most Japanese bank shares are held by the bank's large industrial clients, said Nomura's Mr. Takahashi.

"It's an indirect interlocking," he said. "These are stable shareholders who would never sell their stock."

Said Mr. Kakutani, "Their investment criteria are a lot different than those of a mutual fund manager in the U.S."

And for all the U.S. banks' talk about focusing on shareholder value, many of their actions indicate that growth still matters. Richard Fredericks, analyst for Montgomery Securities Inc., notes a strong correlation between size and a bank officer's compensation.

"There's no correlation between pay and performance," he said. "The bigger the bank, the bigger the pay."

In addition, many U.S. banks continue to seek growth through mergers and acquisitions — often to the detriment of shareholder value. In explaining his hostile bid for Irving Trust Corp. last year, Bank of New York Co. chairman J. Carter Bacot said, "If you look around the country at some of the big mergers that have occurred [and] at the superregionals, all of a sudden we don't look so big anymore. If you want to be competitive nationally and internationally, size becomes an important factor."

Experts debate on the various economies of scale that size offers, but all agree that there is a point at which additional size means nothing. "When you get to be as big as Morgan, what is more size going to buy you?" said Steve Berman, analyst for County Securities Inc. "The name of the game is to syndicate, not to book more risk. Once you get to the big leagues, it doesn't matter."

He said that size rankings not only fail to consider syndications but other fee-based businesses so vital to major U.S. banks, such as securitization and merger and acquisition advice. It is in these areas that U.S. banks have a vast competitive edge over the Japanese.

"The Japanese banks are incapable of doing the sophisticated, complicated deals," Mr. Berman said. "Maybe they'll be able to do it someday, but they're extremely risk-averse. They like the simple, brand-name loans at low-margins."

In the end, then, bankers and analysts are divided over how far the Japanese banking tidal wave will wash over these shores. Mr. Wriston feels that any talk of the Japanese buying up U.S. banks or Japan overtaking this country as the world's financial center is misguided.

"If they're going to take over the financial resources of U.S. banks, they

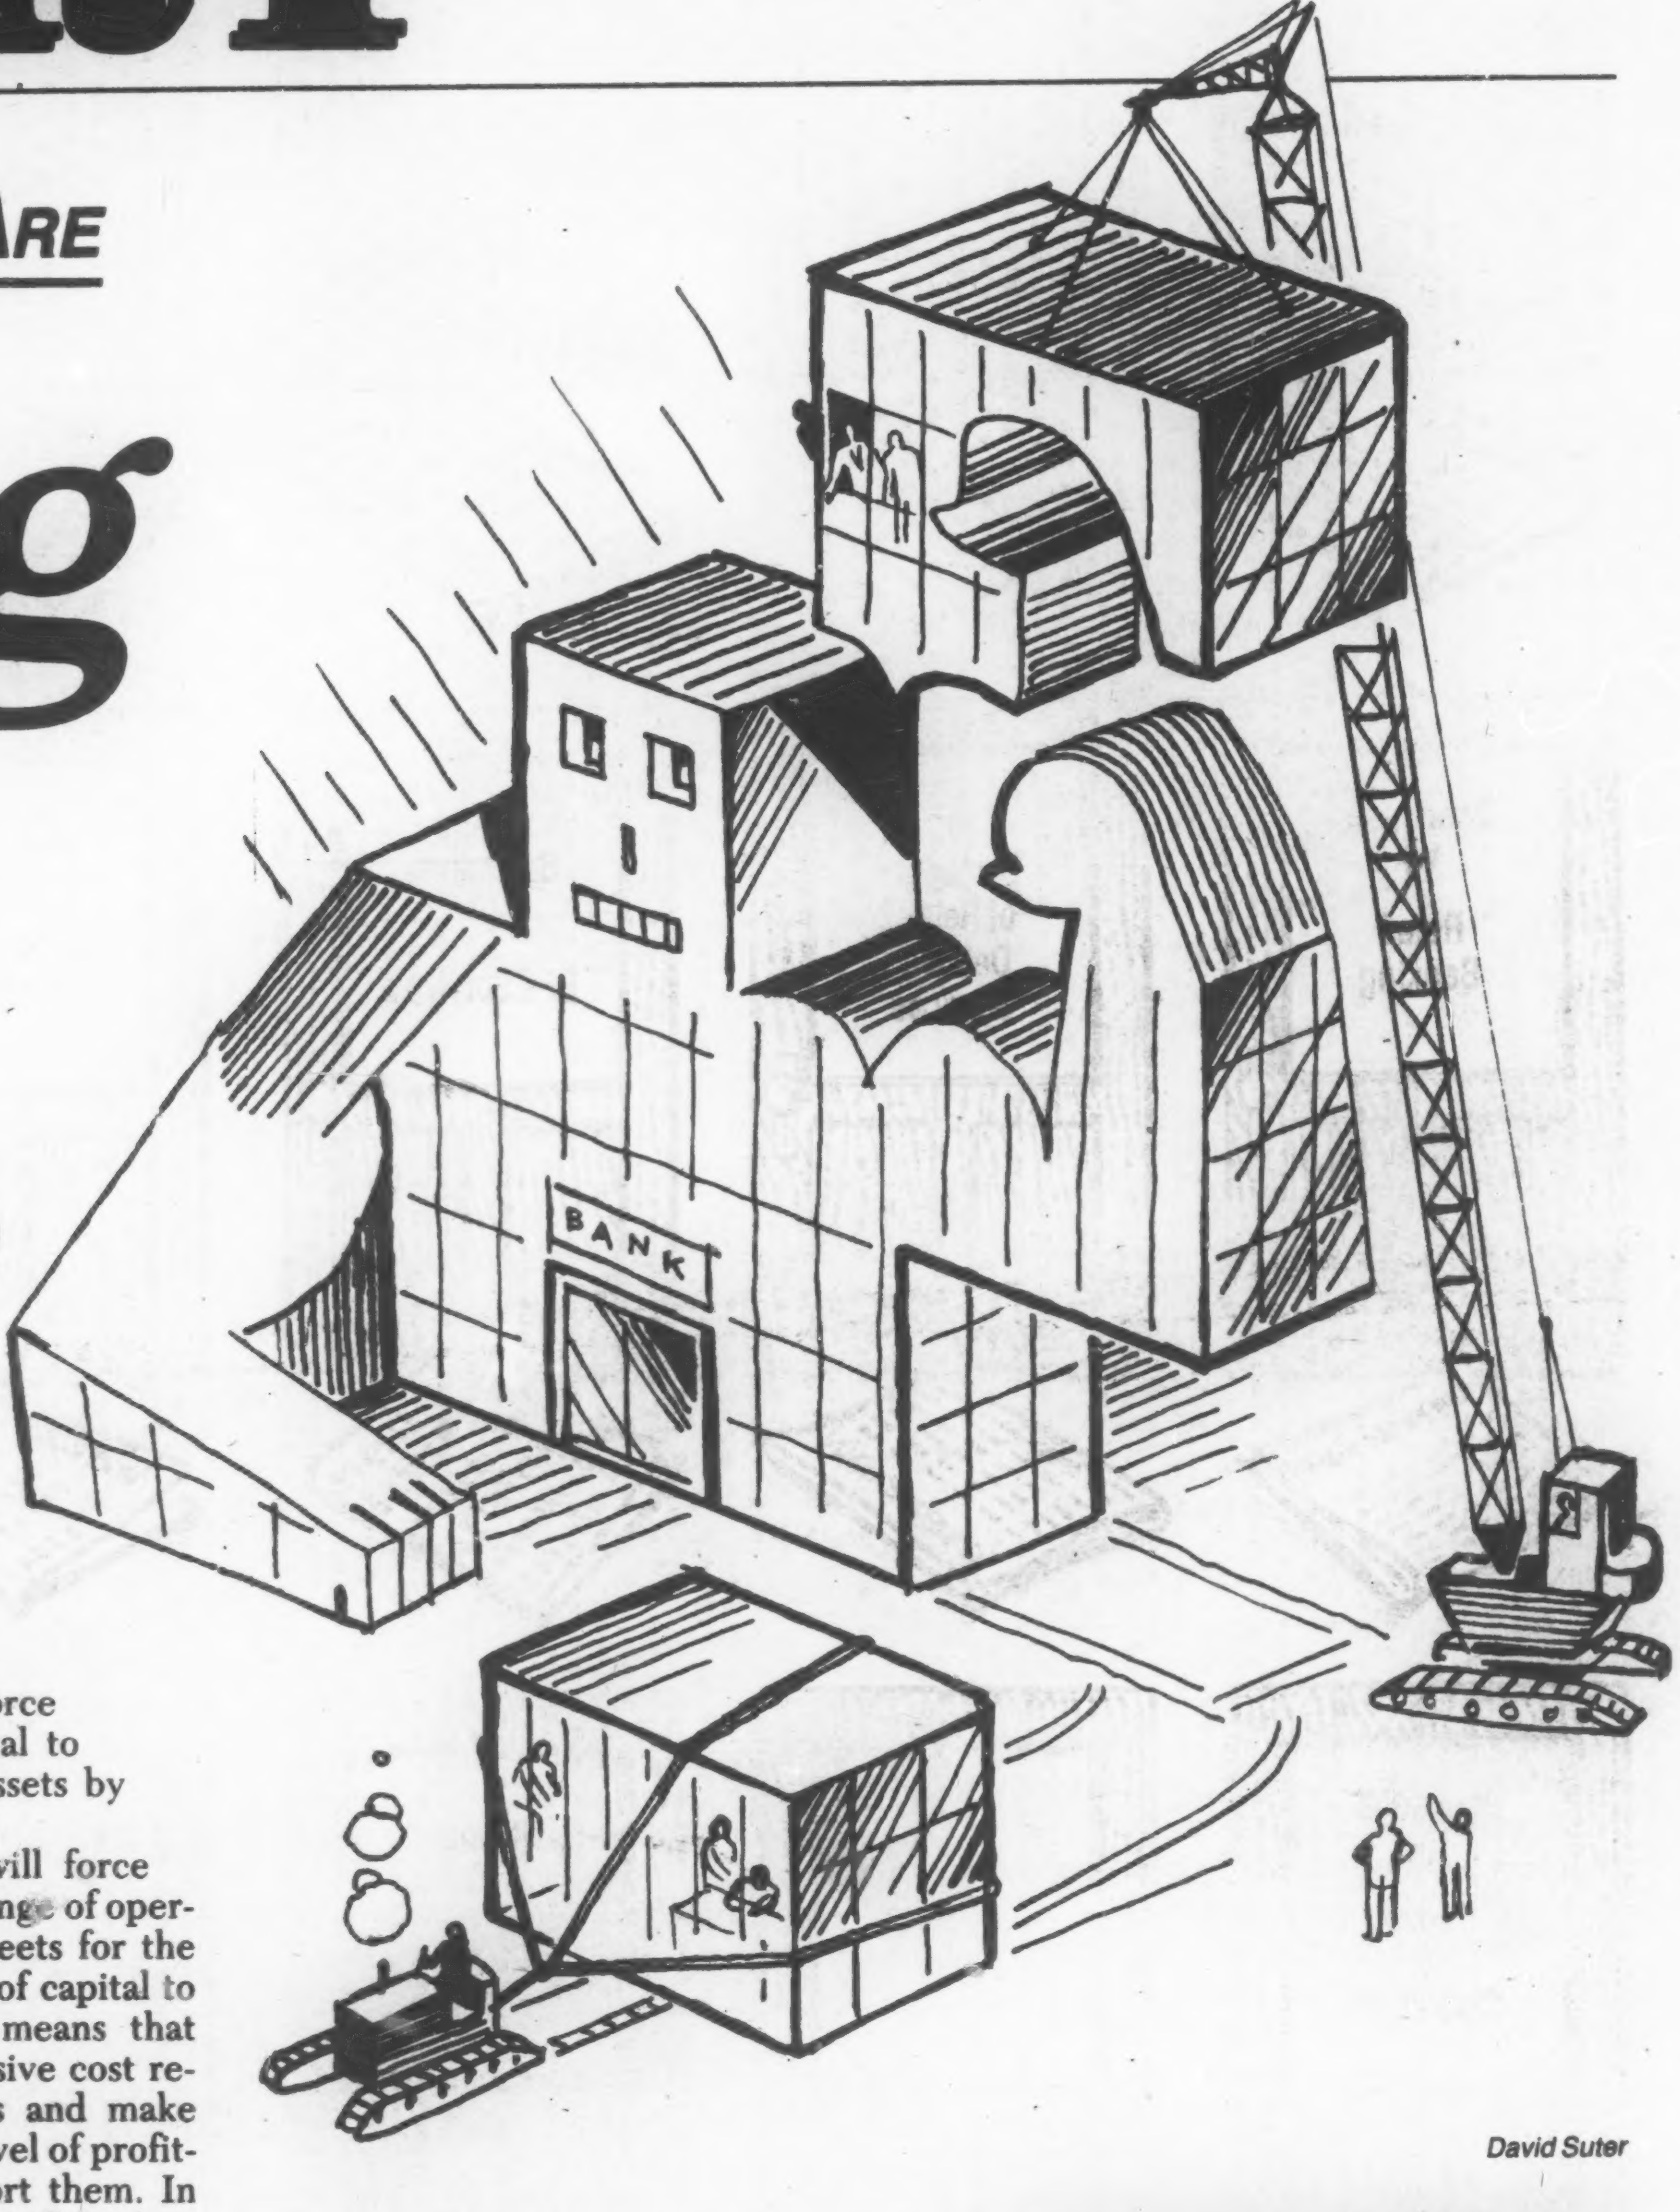
ALL OVER THE WORLD, BANKS ARE

Cutting Costs

Profits, not size, will distinguish the 1990s' top players. The contenders are getting in shape now.



David Suter

By John J. Duffy

London

IF THE EVENTS OF TWO days can ever be responsible for shaping the course of an industry for years to come, the banking sector in 1987 was a classic case.

The two days in question — Tuesday, May 19, and Monday, Oct. 19 — do not even require further identification for most bankers. On May 19, Citicorp shocked the banking world by making huge provisions for its doubtful Third World loans. On Oct. 19, world stock markets crashed as the Dow Jones industrial average plunged a record 508 points.

OVERVIEW

The two events, looked at with roughly a year's hindsight, come together to form a watershed in modern banking history. The dominant banking trends of a few years earlier — the securitization of lending and the globalization of markets — lost their urgency in the post-Citicorp, post-Crash world.

In 1988, the most pressing need for many major banks is to raise capital and cut costs.

The twin goals of cost cutting and capital raising have been given added urgency by the development of international capital standards over the past year and a half. On July 11, central bank governors from the Group of Ten industrial nations gave final approval to the measures, which will force banks to have capital equal to 8% of the risk-adjusted assets by 1992.

The capital measures will force banks to declare a broad range of operations on their balance sheets for the first time. The added cost of capital to support such operations means that banks must conduct extensive cost reviews of many businesses and make new decisions about the level of profitability necessary to support them. In many cases, such reviews will lead to cutbacks.

Budgeting for the Future

Cost cutting, however, is not a simple process. To do so effectively, banks must decide not only on the cost level that is appropriate for today's business, but for tomorrow's as well. In effect, banks must think hard about where they want to be in the future and budget for it accordingly.

"You cut costs without thinking about it at your peril," says Norman Bernard, a vice president at the consulting firm of Booz Allen & Hamilton in London. "Because without thinking, you may in fact be chopping away at a major pillar of your future growth."

Management consultants point out that there are basically two approaches to cost cutting: a knee-jerk approach and a long-term strategic approach. Booz Allen, for example, calls this second choice the "chess" approach.

Each style is appropriate for certain circumstances. In the case where a cash hemorrhage has become so rapid that a bank's capital adequacy is in danger, the knee-jerk approach is clearly the right one.

In less severe cases, however, the chess approach is clearly superior because each cost-cutting move is considered in relation to its long-term effect, experts say.

"You particularly have to take into account the risk-reward tradeoff," says Mr. Bernard. "The tradeoff is the likely benefit of cuts as compared with the likely cost of loss of marketshare, loss of clients, loss of morale, and the specific loss of income."

In some cases, in fact, the correct approach to cost cutting requires substantial expenditures up front in order to reap long-term savings, experts say. Such spending could be for technology to automate or consolidate operations, or to buy out people who do not fit in long-term strategic plans.

Cost-cutting experts say it is also helpful to divide costs into categories that show how severely spending cuts affect products and customers.

Overhead costs, for example, are generally seen as those for premises,

Continued on Next Page

John J. Duffy is chief of American Banker's bureau in London.

Continued from Previous Page

equipment, and general management. Process costs are those that directly relate to producing and delivering a product or service. A third group, marketing, selling, and servicing costs, cover salesmen, account managers, and those employees who service or support the product once it is in the market.

"If you can identify where costs come from, you have a much better handle on how to cut them and do the least damage," says one cost-control expert at an American bank in London who asked not to be identified.

The effects of such cost-cutting programs have already been seen in a number of ways.

In international business, banks have been forced more than ever to redefine their target markets and develop new strategies for serving those markets thoroughly but with the least cost.

Thus Chemical Bank (New York) and Bank of America (San Francisco) have decided to focus their international resources solely on corporate business. Consequently, Bank of America sold its Italian retail bank and British mortgage subsidiary, while Chemical is in the process of selling its foreign private banking and mortgage businesses.

Low-yielding businesses and branches are being ruthlessly chopped or abandoned altogether. First Chicago Corp. recently sold branches in Paris, Milan, and Rome while Citibank (New York) has closed branches in regional British cities after attempts to develop a middle-market lending business did not pan out. Among low-yielding businesses, American banks have recently opted out of Eurobond trading and international letters of credit.

Non-American Allegiances

Among non-American banks, cost cutting has often taken the form of strategic alliances. Last year, for example, Midland Bank (London) sold a 14.9% stake in its equity to Hongkong and Shanghai Banking Corp.

The two banks are now in the process of rationalizing operations throughout the world, with Midland taking over many of Hongkong's European businesses and Hongkong taking over Midland's Far Eastern businesses. Overlapping operations, such as Midland's Hong Kong-based equity dealing arm, have simply been closed.

The process has been imitated throughout Europe as banks struggle desperately to improve their cost efficiency in preparation for the single European market after 1992. The 12 members of the European Economic Community have agreed to a monetary union by that date.

With the prospect of European-wide competition less than five years away, banks in Spain, West Germany, Scandinavia, Belgium, and the Netherlands have all formed alliances in the hopes of becoming not only bigger, but leaner, more cost-efficient institutions.

Cost cutting has forced the banking industry to question the whole concept of super banks. The widely held theory that in order to prosper in the 1990s and beyond major banks would have to provide a full range of services in all major markets is undergoing a radical re-think.

A few banks like Citibank still profess the "all things to all people" strategy, but overall the ranks of the potential super banks appear to be thinning rapidly.

In the 1990s, experts say, banks will not be judged by their asset size or even by their return on assets. They will be judged on things like equity, return on equity, market capitalization, noninterest expenses, and even return on noninterest expenses.

It is this radical shift away from size and toward profitability, bankers say, that makes cost cutting in 1988 such an important task. ■

CUTTING COSTS

Plug Further Brain Drain And Help Survivors, Too

After the layoffs, the emotional toll on those left behind can diminish the benefits gained from restructuring.

By Merri Rosenberg

AFTER THE GIDDY EXpansion of the early 1980s, the recent trend toward retrenchment has been a sobering reminder to many in the global financial services community that good times cannot last forever. Few institutions are immune to the pressures of the lean and mean mandate that permeates today's newly competitive environment.

Yet in the frenzy to cut costs, far too many companies forget that the high human cost of downsizing can defeat the purported benefits of restructuring. The dampened morale and fears of survivors can inhibit risk-taking and innovating, exactly those attributes that the new organization most needs.

One of the fundamental problems, say many human resource specialists, is that management too often assumes that those who survive layoffs do not need the same attention or services that are offered to those who are fired.

"The expectation is that these 'invisible victims' should be grateful and glad that they had been spared," says Marilyn Machlowitz, PhD, president of The Machlowitz Co., a management consulting firm in New York City. "Yet survivors don't view it as positively as employers might hope. Researchers have found that the mere threat of losing a job has the same emotional effects as actually losing a job."

First Step in a Solution

What management needs to realize, say experts, is that downsizing is only the first step in a solution, not the end. "It gives a false sense of security to senior executives that the problem is solved and it's back to business as usual," says Robert Tomasko, a principal in the Washington, D.C.-based consulting firm of Temple, Barker & Sloane Inc., as well as the author of "Downsizing: Reshaping the Corporation for the Future."

But "layoffs have negative consequences to those who are laid off and those who are left behind," adds Mr. Tomasko. "The survivors who've lost their work teams or their social relationships within a company need to be helped."

Sometimes, in fact, the special problems that survivors face are ignored by a management team that believes the employees who have survived cutbacks are "lucky to have jobs," and expect them to carry on as usual.

Companies ignore these survivors' plight at their own peril.

"It's as much a responsibility of management to plan for people as for technology," says Robert Zager, vice president for policy studies at Work In America, a not-for-profit policy research group in Scarsdale, N.Y.

One of the problems that survivors may face, according to Dr. Machlowitz, is feeling "vulnerable, betrayed, and isolated." Further, she says, "they turn to their managers for advice and information but the managers may be among the 'walking wounded' and may withdraw from their subordinates. Team spirit suffers as survivors feel they have to look out for themselves. Survivors reduce their risk-taking behavior, so there's less room for innovation."

> ***"The mere threat of losing a job has the same emotional effects as actually losing a job."***

Guilt in the Closet

Hidden guilt can often be a significant obstacle for many survivors, and managers should be sensitive to this possibility. There are those employees who may feel guilty because they still have a job while their colleagues do not.

And survivors whose personal job status has improved as a result of a restructuring may have a particularly difficult time with their situation, say human resource experts. "Some people who end up with a promotion or a better job may feel that their good fortune came at the expense of someone's bad luck," says Dr. Machlowitz.

Managers need to be aware of their own guilt. "Perhaps they gave off negative information that may have gotten an employee fired," says Marcia Meislinti, president of the Westchester-based MCM, a management training and consulting group. Such guilt is likely to surface during downsizing, which may make them less than effective managers.

Still, they need to be particularly sensitive to the anger, hurt, and betrayal that survivors frequently feel. The process of recovery cannot be rushed.

"People will be defensive and fearful for awhile,' says Laurence J. Stybel, EdD, general partner of Stybel, Peabody & Associates, a management consulting firm in Boston and Wellesley, Mass. "Don't expect more than people should be able to give. Acknowledge the loss. And be aware that there is a period of time after the old organization is swallowed up when there is a myth about it. That's simply part of the natural process of mourning."

Ironically, contend some consultants, a well-handled termination program can have a positive side effect on survivors. "If survivors see that there

E.F. Hutton Speaks from the Firing Line

Whether restructuring results in job loss, a promotion, or a new career, the impact is still felt. Following are the stories of some individuals who emerged from a recent restructuring, with varying degrees of satisfaction and success.

Perhaps no merger created more anguish, or was so contrary to all the advice on how to handle a massive layoff, than last winter's acquisition of E.F. Hutton by Shearson Lehman Brothers Inc.

"We all felt very left out in the cold during the entire process," says Greg Usry, an associate in the public finance section of the investment banking company, Ehrlich Bober & Co. Inc., who had been with Hutton for three years. "In a two-week period, everything fell apart. There was a very betrayed feeling . . . to be told on Wednesday that I couldn't go back into the building after Friday.

Shearson also an actu e of "we wrote the book on merger — but what they didn't realize was that handling a company of 2,000 employees with assets of $50 million is different from handling 19,000 employees in a company wort h $1 billion," Mr. Usry continues. "Then again, I'm not sure there is an easy way to handle the merger of 19,000 employees."

For his former Hutton colleague and current Ehrlich Bober associate, Jim Goodwin, the experience was different. "Four different Shearson groups interviewed us, but then they forgot to fire most of us — so for three months we were sitting around collecting paychecks," says Mr. Goodwin. "It was very surgical, and not very humanitarian. Essentially, they took only the cream of the crop.

For a Hutton alumnus who was retained by Shearson (and who declined to be identified), his privileged status as one of the first to be brought over to Shearson was a mixed blessing. "I personally kept everything as quiet as I could," he says. "It feels bad when one person goes down. I think the appropriate channels weren't used. At first, people were relieved that they had a steady job, but after a few months there was a lot of dissatisfaction and anger, especially with regard to compensation."

A spokesman from Shearson says, "We made every attempt in reviewing personnel to be honest and fair. We thought it was in everyone's best interest to let people know their fate sooner rather than later. And those who were let go, we feel we gave them a generous severance package."

The World's
Top 500 Banks
By Deposits

American Banker, for the 31st consecutive year, ranks the world's 500 largest banks in deposits as of yearend 1987. In addition to the top 500 listing, a geographical breakdown of the group identifies the foreign banks by country and the U.S. banks by state. An alphabetical listing of the top 500 shows each bank's deposit and asset rank for 1987. Finally, a "Post 500" listing identifies banks ranked 501 through 1,000 in deposits as of Dec. 31, 1987.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised deposit total for 1986.

Compiled by American Banker, Copyright 1988.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, a compared with data for Sept. 30, 1986. **Exchange rates:** Whenever ble, the New York cable rate is used, and this rate is for same date as figures. See "Foreign Currency Exchange Guide and Exchange Rate parisons" for key to currency abbreviations. **(h)**— A subsidiary of Co nie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary pagnie Financiere de Paribas, Paris, a financial holding company. Consolidated data. **(t)**— Figures are included in the consolidated fig

nd are

parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised deposit total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(p)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised deposit total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised deposit total for 1986.

Compiled by American Banker, Copyright 1988.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Australian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised deposit total for 1986.

Japan Dominates In Bank Deposits; US Out of Top 25

➸ Continued from Page 6

have to take over Ford or General Motors, which are among the largest banks in the world," he said, referring to the automakers' nonbank finance units.

As for the international investment community, he said, "if you had the Army and the Navy trying to keep money from coming into our shores, they'd have as much success as we've had at stopping drugs. Everybody wants to put their capital in America because they have faith on our political system and faith in our economy. That's a sign of strength, not of weakness."

Editors Note: Most of the data for the Top 500 rankings comes from a questionnaire sent by the American Banker to the world's 1,000 largest foreign banks. In addition, the following organizations assisted in providing and verifying data for banks in their respective countries: Institute for Financial Affairs Inc., Tokyo; Confederacion Espanola de Cajas de Ahorros, Madrid; Verband Schweizerischer Kantonalbanken, Basel, Switzerland; and TSB Group Central Executive, London.

Bank-Fraud Plea Brings Jail Term

ALBANY, N.Y. — A former moving and storage company executive has been sentenced to 18 months in prison for bank fraud and stealing from the firm and its employee pension account.

U.S. District Judge Con Cholakis handed down the sentence to J. Thomas Vogel, 43, of Albany. Mr. Vogel is the former vice president of Vogel Van and Storage. He had pleaded guilty to four felony charges of making false statements and reports to banks, defrauding banks, and unlawfully converting funds from his company and an employee pension fund for his own use.

Banks defrauded included Key Bank NA, Chase Lincoln First Bank, Schenectady Trust Co., Citibank, Albany Savings Bank, Manufacturers Hanover, and First American Bank.

Mr. Vogel admitted submitting false documentation to banks to obtain loans and lines of credit. He also admitted to obtaining $3.5 million in loans by pledging trucks and trailers in the company fleet as collateral, although these vehicles already had been pledged for other loans.

Mr. Vogel also admitted taking $92,000 from the company and a pension fund. His attorney, E. Stewart Jones, had asked the judge for probation for Mr. Vogel rather than a prison term. Mr. Jones said Mr. Vogel was trying to use the money to save his financially distressed company, which had been operated by his family for 70 years.

Mr. Jones also claimed the banks were so anxious to take Mr. Vogel's money that they ignored proper procedures in screening the loan applications.

Assistant U.S. Attorney George Yannis recommended a prison term of 30 to 37 months for Mr. Vogel. He said Mr. Vogel deceived the banks and showed a disregard for his employees by withdrawing pension funds.

Mr. Vogel could have faced a maximum of 14 years in prison and fines of up to $760,000 if he had gone to trial and been found guilty on all counts. ■

Fleet/Norstar Seeks to Run New Hampshire Bank

By MICHAEL WEINSTEIN
New England Bureau

BOSTON — Fleet/Norstar Financial Group, Providence, R.I., expects to begin operating a full-service commercial bank in New Hampshire by fall, said a Fleet/Norstar executive.

Fleet plans to convert an existing loan production office in Nashua, N.H., into what initially will be a one-branch operation, William C. Mutterperl, Fleet/Norstar's general counsel said. "It will be run as a full-service commercial bank."

The middle-market customers of the loan production office will be the "guts" of the new bank's corporate clientele, he said.

"There will be full consumer services available," he said. Fleet already provides consumer lending products in Nashua and has a mortgage office in Bedford, N.H.

In order to operate the bank, Fleet needs the state charter and approvals from the Federal Reserve Board and from the Federal Deposit Insurance Corp. Fleet already has a New Hampshire bank charter and preliminary FDIC approval.

The state charter, granted last November, stipulated that Fleet must divest the New Hampshire bank if it completed a then-planned merger with Norstar Bancorp, Albany, N.Y. This stipulation was consistent with New Hampshire's interstate banking law, which excluded banking companies with any banking operations outside the six New England states from operating a New Hampshire bank.

Fleet Financial Corp. merged with Norstar on Jan. 1, but the New Hampshire banking law was changed a few months ago to permit entry to out-of-state banking companies, as long as more than half of their deposits are in New England and they have headquarters in New England.

Mr. Mutterperl said the new law includes a provision that "grandfathers" Fleet as a New England banking company under the law and therefore authorizes its ownership of a New Hampshire bank.

Fleet has commercial banks in Rhode Island, Connecticut, Maine, and New York. The firm has expressed interest in building a banking franchise south to the Washington area and west to Ohio.

Fleet's merger with Norstar triggered a divestiture provision in Connecticut law, but the company's sale of its Connecticut bank has been delayed pending Connecticut Banking Commissioner Howard B. Brown's issuance of new regulations. ■

One way to beat costly lawsuits is not to have any.

Lender Liability Law Report
The only complete source on lender liability law

NEW!

The skyrocketing number of lawsuits against borrowers has turned the banking and lending field into a battleground. **Lender Liability Law Report,** a brand new, comprehensive reporting service arms you with the information you need to avoid the nightmare of costly litigation.

Unlike other publications on liability law, **Lender Liability Law Report** is the only one that provides important jury decisions in lender liability cases *and* delivers the kind of unprecedented coverage that house counsel, outside counsel, and loan officers can't afford to be without.

Every month, it brings you expert analysis, reports on current court cases, and the latest techniques you can use to avoid potentially disastrous lawsuits.

Each issue delivers expert editorial guidance and coverage of:
- Oral loan commitments
- Bad faith in negotiation
- Improper demand for payment
- Taking control of a defaulting borrower's business
- Misrepresentation in effecting a loan recovery
- PLUS—pending legislation, unpublished court decisions, and case citations.

In addition, **Lender Liability Law Report** alerts you to developments in lender liability law when they occur—and informs you of those areas of lender liability that are about to emerge, including:
- cases where lenders have filed counter-claim suits
- cases involving liability in environmental clean-up, and
- consumer loans that go into default.

Don't be left vulnerable to damaging lawsuits by borrowers. Use **Lender Liability Law Report** and stay informed!

Judge Sentences Two in Queen City Fraud Case

By MICHAEL J. PARKS

SEATTLE — Two men involved in the 1984 collapse of Queen City Savings and Loan Association of Seattle were sentenced to prison on Friday by a federal judge.

Jerry D. Smith of Phoenix — formerly a real estate developer in Walla Walla, Wash. — was sentenced to 10 years. Michael Kirchoff of Gig Harbor, Wash., a former president of the association, was sentenced to two years. Paul Smith of Midland, Tex., Jerry Smith's brother, was placed on probation for five years.

Jerry Smith and Mr. Kirchoff were been convicted of conspiracy, wire fraud, and making false entries in bank records. Paul Smith was convicted of a single count of aiding and abetting the false entries.

During a six-week jury trial in U.S. District Court for Western Washington that ended in May, prosecutors said the men systematically looted Queen City of millions of dollars in 1982 and 1983; loans that were supposed to go for land development in Texas ended up in dummy corporations.

Queen City failed in 1984 and was sold by regulators to Gibraltar Financial Corp., Beverly Hills, Calif. The successor thrift is Gibraltar Savings.

Prosecutors contended that the association was actually run by Jerry Smith, who never held a title at the association but had brokered its purchase by a Canadian businessman.

At sentencing, Jerry Smith told the judge he had made careless mistakes but wasn't guilty of fraud. Judge John Coughenour replied: "The message must go out to the business community that if these types of transactions take place, people go to prison."

The case was handled by a Seattle-based federal bank fraud task force that has obtained several convictions of bankers in the Pacific Northwest. ■

Financial Center Basks in Limelight

➵ Continued from Page 3

The second black to become Atlanta's mayor, Mr. Young "is probusiness in every sense of the word," says Mr. Riddle.

In larger part because he became well known as U.N. ambassador and developed important contacts, Mr. Young is now "the finest representative we could have," says Mr. Riddle. "He can go anywhere in the world and people know him and want to see him."

Despite the city's reputation for harmonious racial relations — it was known for years as "the city too busy to hate" — its banks were embarrassed recently by a series of articles in *The Atlanta Constitution* charging that local banks and thrifts have systematically favored whites over minority borrowers, a practice known as redlining.

The timing of the articles, coming as they did in May, just before the Democratic Convention, could hardly have been worse for a local financial services establishment anxious to put its best foot forward during a time when Atlanta is in the public eye.

With the Democrats in town, the Association of Community Organizations for Reform Now, or ACORN, marched on the Federal Reserve Bank of Atlanta Monday afternoon to dramatize its concern with enforcement of the Community Reinvestment Act, which is intended to deter redlining. ■

FSLIC Pays Failed Thrift's Depositors $324 Million

➵ Continued from Page 1

ance Corp. spent $465 million to cover that commercial bank's insured accounts.

The FSLIC estimates that it eventually will recover $125.1 million of the Farmers' settlement by selling the institution's assets. If those projections prove correct, the actual cost to the FSLIC of Monday's action would be $198.9 million.

Regulators said less than $1 million of Farmers' deposits were uninsured. Owners of those deposits will share in the proceeds of the asset liquidations.

Farmers recently topped a list of two dozen institutions that thrift analyst Bert Ely, president of Ely & Co., Alexandria, Va., described as prime candidates for liquidation by the FSLIC. That list appeared in the July 5 edition of the *American Banker*. The institutions, Mr. Ely said, were unsellable because they were running on high-cost deposits and lacked retail branch franchises.

When the list was published, Federal Home Loan Bank Board Chairman M. Danny Wall said the likelihood that any of the institutions on it would be liquidated was "very low."

10 Largest FSLIC Payouts Since '84

In millions of dollars

	Date	Amount
1. **American Diversified Savings Bank,** Costa Mesa, Calif.	6/6/88	$1,140.0

10. **Community Federal Savings and Loan,** Nashville	6/7/85	22.7

Source: FSLIC

'A Hot-Money Desk'

In a prepared statement yesterday, Mr. Wall said Farmers had become "a hot-money desk," using jumbo deposits to fund risky commercial loans.

"We couldn't successfully market this institution," Mr. Wall said. "There were no teller stations, virtually no retail deposits, and no franchise value to offer an acquirer."

Martha Gravlee, a spokeswoman for the Bank Board, said virtually all the deposits at the failed thrift were six-month certificates of deposit.

Payouts are the most costly way of eliminating a problem institution, Ms. Gravlee said, and are only used by regulators as a last resort. She did not rule out more payouts for the rest of the year.

Bank Board member Roger Martin said the FSLIC would pattern Monday's depositor payout after last month's $1.35 billion depositor payouts at American Diversified and a second thrift in Costa Mesa, North America Savings, which had about $209 million in deposits. Those payouts are 98% complete, Mr. Martin said.

He said the FSLIC hopes the closing of Farmer's will help reduce the cost of funds for the entire industry.

"Farmers was a prime example of a bankrupt thrift offering exorbitant rates that in turn forced the healthy industry to raise their own rates," Mr. Martin said in a prepared statement. He said Farmers was paying an average deposit rate of 8.95%, 157 basis points over the 7.38% national average cost of funds and 162 basis points higher than the district average computed by the Federal Home Loan Bank of San Francisco.

Under Management Consignment

Regulators booted out Farmers' original management in October 1985 and federalized the previously state-chartered institution, citing huge losses, lack of management controls, and inadequate internal accounting. It placed the thrift in the Bank Board's management consignment program, hiring California Federal Savings and Loan Association to oversee the thrift and reverse its slipping fortunes.

Farmers had grown from $186.3 million in deposits at yearend 1983 to $583.2 million at the of 1984. Assets grew from $52 million in 1982 to $733 million in 1984. As of May 31, Farmers had $181.5 million in assets, $334.7 million in liabilities, and negative regulatory capital of $153.2 million.

The liquidation is contrary to what Los Angeles-based California Federal recommended to the FSLIC while it managed Farmers. It resigned the assignment early last year.

"We were recommending a long-term workout," said George P. Rutland, former president and chief executive officer of CalFed Inc., which owns California Federal.

Mr. Rutland, who now is chairman and chief executive officer of Northeast Savings in Hartford, Conn., said California Federal quit managing Farmers because the FSLIC "was too slow in acting" on its recommendations, each of which had to be approved by the agency.

Since California Federal bowed out of Farmers, the institution had been managed by another outside team hired by the FSLIC.

Farmers' deposed chairman, Peter Anders, was murdered in 1986. A tenant who owed the 41-year-old banker $7,690 in back rent was convicted last March of hiring the killer. ■

Stonier Honors Nadler With Leadership Award

WASHINGTON — The American Bankers Association Stonier Graduate School of Banking honored Paul S. Nadler with the Ayers Leadership Award for his contributions to banking and economic education.

Mr. Nadler, who is the 13th person to receive this award since its inception in 1947, has been an instructor at Stonier, part of the University of Delaware, Newark, Del., for 30 years and a professor of finance at Rutgers University, New Brunswick, N.J., since 1958. He also received the 1987 Professor of the Year award at Rutgers.

Mr. Nadler is a contributing editor of the *American Banker*. ■

Management of Failed S&L Agrees to Pay $23.5 Million

West Coast Bureau

SAN FRANCISCO — The State of California settled for $23.5 million its lawsuit against the officers and directors of Western Community MoneyCenter, a Walnut Creek, Calif., thrift that failed in 1984.

The money will be used to repay various claims against the company, including one from the Federal Savings and Loan Insurance Corp., which placed MoneyCenter's savings and loan affiliate into receivership.

The state charged in its lawsuit that MoneyCenter collapsed because of mismanagement and the failure of its accountants, Peat Marwick Main & Co., to audit the firm properly. The state has a suit pending against the accounting firm. ■

The pooling of data processing resources by Kidder Peabody and First Boston could serve as a model for bankers seeking to make their back offices more efficient. ______6

Michael Simmons is settling in as the new head of systems engineering at Bank of America. ______7

A software package designed to make the credit card business economical for smaller and newer banks is being offered by Visa International. ________8

Worth Repeating

[New Deal Democrats] told us that they were going to guarantee that when we put our money in the bank, our money would be insured — and they did what they said. They did not lie to us.

Texas State Treasurer Ann Richards in the keynote address at the Democratic National Convention. [Page 1]

TV Expedites Validation of Visa Charges

By JEFFREY KUTLER

NEW YORK — Now that its payment system spans the globe, Visa International is introducing technology and changing some procedures to make bank cards acceptable in retail establishments that have tended to shun credit cards.

Visa wants to use television signals to transmit its authorization files to what it calls "high-throughput merchants." These would include outlets where speed is of the essence: fast-food restaurants, convenience stores, movie theaters, sports arenas, gas stations, and parking lots.

Technology Section Begins on Page 6

With authorization files broadcast directly into a store's computer system, transactions could be completed within an instant of a Visa card's passage through an electronic point-of-sale terminal.

To keep patrons moving through the lines, merchants would not have to imprint the traditional sales drafts, get customers to sign them, and return a carbon copy. The documentation would be unwieldy in a quick-service environment where transaction amounts are relatively small; Visa offers to scrap it in the interest of "throughput."

Visa officials call it the Express Payment Service and tout it as a way to make bank cards a reasonable alternative to cash. They have at least one fast-food retailer willing to test the proposition, and other merchants are said to be interested.

Arby's, a purveyor of roast beef sandwiches, will be the first to demon-

DEMOCRATIC NATIONAL CONVENTION

Keynoter Alludes to FSLIC Woes

By ROBERT M. GARSSON

ELECTIONS
'88

ATLANTA — In recalling her party's glory days, Texas State Treasurer Ann Richards told a jubilant Democratic National Convention about the creation of the deposit insurance system under President Franklin D. Roosevelt.

New Deal Democrats, she said, "told us that they were going to guarantee that when we put our money in the bank, our money would be insured — and they did what they said."

"They did not lie to us," she added emphatically, bringing delegates here to their feet in one of many ovations for her keynote address on Monday night.

Deposit insurance is not likely to receive many more moments of floor time at the Democratic National Convention. Delegates are talking about other issues: drugs, trade, and advance notice of plant closings.

But for a significant number of delegates, the federal deposit insurance system — particularly the battered Federal Savings and Loan Insurance Corp. — is a difficult, worrisome issue. It is looming ever larger in their calculations about what decisions the next President must make during his first months in office.

"The numbers are moving so quickly, from $15 billion to $50 billion," said Rep. Marcy Kaptur, D-Ohio, refer-

RMA Unveils Lender Training Program

By JOHN P. FORDE

NEW YORK — Robert Morris Associates, the national association of commercial bank lenders, unveiled the first courses Tuesday in a comprehensive program designed to train commercial lenders in all stages of their careers.

The program, called "Mentor," is the Phildelphia-based trade group's response to the cost of training bank officers, which it claimed can run as high as $100,000 a year per employee, including salary.

The three-track program is designed for bankers with varying levels of experience. The courses can be viewed as lower-cost alternatives for banks that would otherwise have to devise their own training programs to suit the specific needs and experience of their employees.

Training programs within banks "are expensive and they do not zero in on a given segment," said William H. Sayre, president of the group, at a press conference. Mr. Sayre is also an executive vice president at Fidelcor Inc. and Fidelity Bank, Philadelphia.

The new courses, he added, can also supplement a bank's in-house training and educational efforts from other sources, such as courses offered by other trade groups.

The Mentor program will eventually offer between 25 and 30 courses. On Tuesday, the group announced financial accounting, business writing for bankers, using credit information in risk assessment, uniform credit analysis, sales techniques for commercial lenders, sales management for commercial lenders, and commercial loan

National Banks in Midwest Hope Court Rule will Expand Branching

By RICHARD RINGER
Midwest Bureau

CHICAGO — Despite a precedent-setting case that gave national banks broad branching powers, national banks in the Midwest have had little succeess circumventing branching restrictions in their home states.

To ease these restrictions, several national banks in a small but increasing number of Midwest states are relying on a Mississippi national bank's successful establishment of a branch that was expressly prohibited by state law.

In February 1987, a federal appeals court upheld a decision by the Comptroller of the Currency that gave more liberal branching authority than existed under Mississippi law to Deposit Guaranty National Bank, Jackson, Miss.

The Comptroller ruled that since Mississippi's savings and loans had statewide branching authority and banklike powers, national banks in Mississippi should have the same branching rights.

Since the appellate ruling on this case, the Comptroller's office has faced court challenges to its approval of branching applications from national banks in states where there are restrictions.

The Mississippi ruling is not binding on federal courts in other districts. Still, federal appeals courts in other states, most recently in Texas, have supported the ruling and have given national banks broader branching powers than are allowed in their home states.

And many banks and their attorneys believe their cases for expanded powers are similar to the Deposit Guaranty case. Perhaps.

Judging from the record, the similarities are not as close as the banks maintain. To date, no national bank in the Midwest using the Deposit Guaranty argument has won its case. The Comptroller has yet to approve any branch application by a Midwest national bank that has cited the Mississippi arguments.

Use of Precedent

National banks using the Deposit Guaranty precedent to ease restrictions on branching in their home states

Application status	Nationwide	Midwest
Filed[1]	100	6
Approved	44	0
Denied	1	0
Pending	54	4

[1] Filed with Comptroller as of June 30. Applications by two Detroit national banks are now moot because of a statewide branch banking law that takes effect Aug. 1.

Source: Comptroller of the Currency

Significantly, however, national banks continue to press the issue even at the prospect — and sometimes outright threat — that they will be challenged in court. In one instance, the Michigan Legislature rewrote its branching law after two national banks filed applications based largely on arguments used in the Deposit Guaranty case. Here's an update:

- In Indiana, the Comptroller has not yet ruled on a branching application by Indiana National Bank, Indianapolis, despite rumors circulating in February that a ruling was due in about a month. Indiana National filed the application nearly a year ago on July 27.

"We're waiting," Greg Schenkel, a vice president at Indiana National Corp., the bank's parent company, said last week. "We truly don't know when a decision will be rendered."

He said the Comptroller requested additional information pertaining to the bank's application to open a branch in Bloomington, outside the region allowed under Indiana law.

Each time more information is requested while reviewing a branch application, the evaluation period starts over again, said Leonora S. Cross, a spokeswoman for the Comptroller's office.

Some bank attorneys say the delay in

Survey Shows Losses Are Low in Swap Market

By LISABETH WEINER
Midwest Bureau

CHICAGO — Outstandings in the five-year-old interest rate and currency swap markets have surpassed the $1 trillion mark, while losses from these products have totaled only $33 million — a fractional amount of the business that has been booked.

These findings were released by the International Swap Dealers Association based on surveys prepared by Arthur Andersen & Co.

"We think this makes a good case to regulators around the world that this product has a relatively low credit risk, and that's true for both interest rate and currency swaps," said Mark Brickell. He is vice president of Morgan Guaranty Trust Co. and chairman of the swap dealers group.

An interest rate swap is an exchange of debt obligations between counterparties. In the most common type of swap, one party exchanges its floating-rate debt for another party's fixed-rate debt. A currency swaps might exchange U.S. dollar debt for Japanese yen debt. Financial institutions, government agencies, and corporations use these tools as a means of managing their balance sheets and reducing their funding costs.

The survey was based on responses from 49 market participants, including the largest in the world. It concluded that at the end of last year interest rate swaps comprised 80% of the global swaps market, with $889.5 billion in outstanding notional value. Currency swaps have outstandings of $219.2 billion. The results, which include the market among dealers themselves, are based on 52,629 transactions.

New Swap Business in 1987

In millions of U.S. dollars

Currency	Interest Rate Swaps	Currency Swaps
U.S. dollars	$286,731	$38,459
Yen	31,615	13,710
Deutsche marks	22,331	5,782
Sterling	20,466	2,112
Other	26,715	25,761
Total	387,858 (81.88%)	85,824 (18.12%)

Source: International Swap Dealers Association Inc.

Writeoffs from swaps totaled $33 million and consisted of 23 swap transactions with a combined notional or face value of $283 billion, according to the survey. Of the 71 firms surveyed, 11 had losses on their swap portfolios. Of those swaps that failed, 19 were U.S. dollar-denominated interest rate

Security Pacific Shakes Up Staff

By MICHAEL J. PARKS

Security Pacific Corp., Los Angeles, on Tuesday announced new assignments effective Aug. 1 for several executives involved in its California, Arizona, and Washington operations.

A week earlier, Security Pacific's subsidiary in Seattle, Rainier Bancorp., announced the layoffs of about 4% of its employees. Rumors have also circulated that Security Pacific may change Rainier's name.

Several regional banking companies have been working on ways to improve the efficiency of their operations following large interstate mergers, and Security Pacific's executive shuffling may reflect that trend.

Jon M. Christoffersen, 45, now president of Rainier Bancorp. and Rainier National Bank in Seattle, will move to Los Angeles to become vice chairman and chief administrative officer of Security Pacific National Bank. He will report to Robert H. Smith, Security Pacific National's president, and will head financial and administrative units. The bank has four other vice chairmen.

Replacing him in Seattle as president and chief operating officer of Rainier Bancorp. and Rainier National Bank will be John C. Getzelman, 45, now a Security Pacific executive vice president.

In Phoenix, Robert L. Matthews, 50, formerly president of Arizona Bancwest Corp. and the Arizona Bank, has been elevated to chairman of both and remains chief executive.

His successor as president is William S. Thomas, 44, a Security Pacific executive vice president, who becomes chief operating officer of the holding company and the bank. Don B. Tostenrud, 63, moves from chairman to chairman emeritus of Arizona Bancwest and remains executive committee chairman.

In Seattle, Gordon F. Given, 52, W. Thomas Porter Jr., 54, and Stanley D. Savage, 43, have been elected vice chairmen at Rainier National. All are now executive vice presidents.

A Security Pacific spokeswoman said, "There's no name change for Rainier in the works today." But, she added, that does not preclude the possibility of a future name change. ■

FINANCIAL TECHNOLOGY UPDATE

A modular design provides ATM flexibility. The modular design of the 5070 Single Solution Terminal (SST) from NCR is designed to enable banks to start cost-effectively and upgrade capacity as volume grows or upgrade to full function as requirements change. Financial institutions can now make economical use of those sites that are initially high in visibility but low in volume.

Advanced processing for branch automation. The Financial TOWER System 2 (FTS 2) from NCR is a state-of-the-art transaction processing system for branch automation. FTS 2 can provide a total solution in advanced hardware, software and communications in an open architecture designed to accommodate tomorrow's emerging technologies. The system also incorporates an advanced platform selling environment with sophisticated networking capabilities designed to provide customers with superior service.

The People's National Bank, of Easley, South Carolina, recently purchased NCR's Banker 80-II account processing system. According to Robert Dye, President of The People's National Bank, "The tremendous power of this small system enables the fledgling financial institution to effectively compete in an arena of giants." Mr. Dye also stated that he was impressed with the abundance of customer information made available, and the system's flexibility to tailor individualized products.

NCR provides in-house item processing with the NCR 7720-3101 intelligent item processing system. The 7720-3101 is designed to be cost effective and efficient, reducing document handling while increasing accuracy. This automated, one-step system has the following basic capabilities: encoding, endorsing, sorting, and transmission of data to and from a host.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

Recovering from Job Loss? Draft Your Plan of Action

By GEORGIA HICKEY

Second of Four Articles

AVOIDANCE and procrastination are enemies waiting to sabotage your efforts. Recognize them for what they are — normal responses to change and depression. Do not lull yourself into complacency by taking a vacation or six weeks off to paint the house.

Though you will certainly not be at your best right now, the activity of drawing up your plan will be a positive and reinforcing step for you. It will help to move you from the past and toward your future.

Your plan should incorporate provisions for managing your finances, for negotiating severance pay and/or services, and it should provide the initial framework for your job search.

Ask to participate in drafting your severance package. If you're a senior officer or an employee with long service, you have more leverage than you may realize.

First and foremost, negotiate for the continuance of your insurances, particularly medical coverage. While life insurance is relatively affordable and orthodontia can be postponed, medical coverage for you and your family is almost out of reach to individuals.

Most employers are willing to continue your coverage for 30 days, and some for much longer. Arrange, if you can, the option of continuing coverage indefinitely (until you're covered by a new employer) by making the payments yourself, but at the company's group rate. You must maintain coverage; without it, an accident or illness could destroy you financially.

Next, try to obtain secretarial support for as long as it's feasible. Having someone to depend on for messages, correspondence, and word processing is an extremely valuable resource.

If your employer offers an outplacement service, try to negotiate for the money instead. You can then selectively retain a counselor or pay for services as needed, resulting in a more customized program. This avoids the cookie-cutter approach used by most outplacement agencies.

Do not limit the scope of your job search at this juncture. Far too many limit themselves to their own backyard for the first several months of a search, and too often local opportunities are limited (or nonexistent).

Do not miss an attractive position because it means you have to move. If you develop both local and out-of-town possibilities or offers, you will have the luxury of evaluating trade-offs and choosing which makes the best sense for you and your family.

If, however, you go for many months with no opportunities in the local market, it is difficult to convince potential employers that relocating to accept a position is anything but a last resort. They will be skeptical of your long-term commitment.

Take Good Care of Yourself

Most people badly underestimate the amount of time and effort required for a successful job search. It can be a long and difficult ordeal, and most people find it requires them to work harder than they've ever worked in their lives.

There may never be another time in your life when you will be more vulnerable to stress and depression. It is imperative that you confront these potentially debilitating forces and counter them with good eating habits, a good night's sleep, regular exercise, and attention to personal grooming.

Before you dismiss this as too obvious, it's not as easy as it sounds. Your business schedule and former coworkers have had profound influence on your life-style and the habits you've formed.

Once removed from the environment and schedule you' re used to, you are going to feel disoriented and depressed. Your eating and sleeping habits will suffer. You'll indulge yourself with late night TV, favorite snacks, and mornings when you skip your grooming rituals.

You must get up and get going as you used to; eat regular meals and avoid lounging around in your bathrobe. Psychologically, it' s advantageous to wear appropriate business clothes, just as you did when you left for the office. But, if that seems too extreme, at least wear your best casual clothes and present a well-groomed exterior, just as you did at the office.

Carefully assess your personal appearance and your wardrobe with an eye toward packaging your product. Now is the time to lose any extra pounds and to invest in the tailoring or repairs needed to put your suits and shoes in top condition.

Don't add unnecessary stress. Make your first-round and second-round interviewing selections now, not the night before. Choose the clothes that make you look best and feel most attractive. They must be conservative, well-tailored and businesslike.

If you're not happy with anything you own, and if tailoring is not the answer, it's time to add a confidence builder. Even if it pinches your budget, you must not underestimate the importance of presenting yourself well.

Set Up A Command Post and a Schedule

Whether your former employer has given you office privileges or not, you will need a quiet, private place at home for the tasks ahead. It may be the guest room, the basement, or the attic — but it must be as comfortable, well lit, and appealing as possible.

Nancy Doniger

You will spend many hours in your new office, and your moods will be affected by your surroundings. Be sure they are not gloomy, shabby, or depressing in any way.

Assemble all the supplies you will need: a calendar, letter files, card files, phone index, pens, note pads, etc. If you have a personal computer, you have a valuable ally. Take full advantage of its capacity to help you keep accurate records, draft your resume and correspondence, and manage mailing lists.

If your budget will accommodate it, install a separate phone line so your business calls will not be interrupted by someone picking up an extension. Your family will not need to forego talking with friends and relatives because you may miss a call, or because you have a list of calls to place or return. Also, you will find it easier to substantiate the tax-deductible expenses relating to your job search.

For all of your working life, you have been on a schedule of when to get up, when to be at the office, when to go to lunch, when to go home. Do not underestimate the comfort value of a schedule. It provides a framework for our lives, our work, and sense of purpose. Now, more than ever, you must fight the temptation to drift along, to sleep late, or otherwise drastically alter your way of life.

Establish a schedule for yourself and adhere to it as much as possible. Just as you did when you were working, discipline yourself to scheduled luncheons and fit your errands in around your work time. If you do a thorough job of looking for a job, you may find you have less free time now than when you were employed.

There are peak hours during each business day when the people you're trying to reach are most accessible, and when they're most likely to return your calls. Also, try to identify your personal peak hours, when you are most alert and capable.

As a general guideline, peak business hours are 8:30-11:30 a.m. and 2-4 p.m. Whenever possible, use personal peak hours to your advantage and place phone calls accordingly. Slack time should be devoted to the paperwork, reading, record keeping, and planning that will support your search.

If your former employer has not provided a secretary to take your messages, you should have an answering machine. Use a simple, businesslike message. If your budget allows, consider employing an answering service.

Spend as little time as possible at your former office, even if its use is part of your severance agreement. If you have long-distance call privileges, plan your list of calls, make them and leave.

It is not healthy for you, or for those employees who remain, when you spend protracted periods of time in your former office. It diverts your attention from the present and future to the past, and will underscore your sense of loss. You are now on the outside looking in. The feeling is unavoidable when you linger in your old surroundings.

Put Yourself in Charge

Finding another job is *your* job. It's a difficult lesson, which is too often too late learned. The sooner you accept full responsibility the better.

If, psychologically, you turn the job over to someone else, or sit back and wait for one of your contacts to rescue you, you will lose valuable time. You will risk being disappointed, embittered, or financially drained.

This does not mean you cannot or should not "network" — because you must. How you go about networking and where you place your emphasis will be governed partially by your attitudes about privacy.

For instance, you may or may not decide to tell your friends and neighbors of your situation. While it's true they are seldom able to offer anything but sympathy and some emotional support, you and they may feel better if you don't keep them in the dark.

> Most people underestimate the amount of time and effort required for a successful job search.

You should contact your business acquaintances and members of professional associations and clubs. But don't be surprised if your new status causes them to back away. Most will want to help, but your request also makes them feel responsible for finding a solution they may not have.

Unless they' re able to do something concrete, your situation will make them uncomfortable. Further, it reminds them of their own vulnerability. So, let them know, but don't depend on them, and don't hold it against them if they don't keep in touch.

Don't overlook your college alumni office, particularly if you're a graduate of a big-name school. You'd be surprised how often executive recruiters use these college offices as one of their sources to find candidates.

If you've been smart enough to cultivate a relationship with a recruiter before now, this could be your best resource for qualified information about a resume format, job-search strategies, and the marketplace both locally and nationally. If you don't already know a recruiter who specializes in banking,

Visa Uses TV Signals to Speed Credit Validations

Continued from Page 1

strate Express Payment Service beginning next month at 17 outlets in Arizona.

There will be "no fussing with cash, making change, or working with sales drafts, imprinters, and the like," said J. Pino Francini, general manager of Visa International, San Mateo, Calif.

Thus, Visa is positioning itself to compete not only against the likes of MasterCard International and American Express Co., but against the most dominant payment system of all — paper.

Cash and checks are used in an estimated 90% of consumer payments. Mr. Francini called this "an untapped territory that holds the potential for tremendous growth in our members' [card] programs, provided we can accelerate transactions while maintaining control over fraud and credit losses."

Several factors coalesced to create the Express Payment initiative: Visa's desire to reach the small-dollar transaction market; Arby's willingness to test the impact of credit cards on its sales; and the availability of a new transmission medium — television signals — for authorization files.

Authorizing these transactions — assuring that the cards are valid and have open lines of credit — is essential. Most fast-food transactions fall below the $50 floor that requires a call to Visa's authorization center, but an electronic check against the "hot card" file would prevent massive losses if lost, stolen, or invalid cards were circulating.

Telephone calls to a Visa authorization center are time-consuming. Conventional computer links to an authorization center, typically via telephone lines, can be expensive.

Visa has encouraged its members to explore telecommunications alternatives, such as the unused portions of television and radio signals, which some retailers may find more efficient for obtaining authorizations.

Last year, seven Kessler's Department Stores in Georgia, working with First National Bank of Atlanta, began using an FM radio station's sideband capacity for this purpose. Kessler's has since gone on to receive the cardholder data on the unused portion of a public television station's signal, known as the vertical blanking interval, or VBI.

The Public Broadcasting Service will also be providing the VBI facility for Visa transmissions to Arby's in Arizona.

The interval may appear on any television screen as a black line when the picture begins to roll, but any business data in the channel could not be decoded without special equipment.

Kessler's and Stats, a wholesale florist in Southern California, used the broadcast media only for authorizations; they continued to follow the sales-slip procedures that are being eliminated in Express Payment Service.

Opportunity in Fast Food

The fast-food industry does $55 billion in annual sales, and virtually none of that on bank cards, Mr. Francini said. Some chains, including McDonald's Corp. and Wendy's International Inc., have participated in bank-owned automated teller machine networks or point-of-sale debit card systems, but on a small scale.

Arizona has been a hotbed of electronic point-of-sale activity. Cactus Switch, a statewide system operated by the Arizona Clearing House Association, is handling more than 500,000 debit card transactions per month. Accounts are settled via the automated clearing house network.

Coincidentally, Visa will soon begin providing automated clearing house services to the Arizona Clearing House. Although Arby's has not yet participated in the Cactus Switch, Visa's Express Payment Service might be seen as a competitive challenge to the debit card system.

Arby's this year became one of the few fast-food retailers to accept credit cards, offering an "extra convenience" at 19 outlets in the Cleveland area, said Len Roberts, president and chief executive officer of the 2,000-store chain.

"Credit cards provide customers with an alternative and nontraditional payment method that attracts new customers and stimulates add-on purchases," Mr. Roberts said.

An analysis by Arby's and its transaction-processing bank — Chemical Bank, New York — showed the average credit card sale to be twice as high as a cash purchase, Mr. Francini said. That experience led Arby's into a test of new technology in Arizona.

In preparation for six months, the new system involves transmission of up-to-date "hot card" listings each day. It is an efficient delivery mechanism, Mr. Francini said, and it gives the retailer more security and reliability than the printed warning bulletins, which are updated only every other week.

"We purposely are going after merchants that are not known for accepting credit cards, because we think this will answer their misgivings," Mr. Francini said of Express Payment Service.

He said the television vertical blanking interval has greater potential than the FM sideband method because "there is no place in the world not reached by TV signals. This is not true of FM radio."

The system that Visa is setting up for Arby's is nondiscriminatory — it will allow Arby's to accept MasterCard as well as Visa. But Visa transactions will be completed within a second or two because of the immediate accessibility of the "hot card" file. It may take a minute for a MasterCard authorization to be returned, Mr. Francini estimated. ■

Losses in Swap Market Are Low, Survey Shows

Continued from Page 2

swaps, two were nondollar interest rate swaps, one was a currency swap, and one was unidentified.

Swap business booked in 1987 totaled $473.7 billion, according to the survey. Of that amount, $387.9 billion or 82% were interest rate swaps and $85.8 billion or 18% were currency swaps.

U.S. dollar interest rate swaps have dominated the market, holding 79% of total outstandings. Last year, $286.7 billion in U.S. dollar interest rate swaps were booked.

The dollar also dominated in currency swaps. Of all outstandings, $98 billion or 45% of the market involved the dollar on one side of the transaction.

The relatively low level of losses from swaps speaks well of the product, Mr. Brickell said, especially as federal regulators are formulating risk-based capital guidelines.

"We think it strengthens our view that there are low risks for currency and interest rate swap products," he said. "It's a good indication of the quality of the counterparties."

Swap dealers have been concerned that, under proposed international capital guidelines, the large amount of capital required to back currency swaps would be disproportionate to what they see as the low risk of the product.

Mr. Brickell said the fact that there has been been only one loss from a currency swap "hints at the possibility that currency counterparties have even a higher level of quality than other counterparties." ■

Continued from Page 22

Michigan banks to open branches anywhere in the state beginning Aug. 1. The precipitating force, said Richard B. Foster Jr., president of Banconsult Inc., a Lansing consulting firm, was when two Detroit national banks filed branch applications last year.

Last Oct. 13, Michigan National Bank of Detroit filed an application to open a branch that, under the old law, was prohibited. And on Dec. 31, Manufacturers National Bank of Detroit filed an application to open a branch where it was prohibited under the old law.

"Statewide branching would not be taking effect so soon if it were not for the two national banks' pressing the issue, said Mr. Foster. "Getting statewide branching was like a glacier moving forward — very slowly."

Still, there is hope. Bankers compare this branching battle to efforts to get interstate banking laws approved.

A few years ago, only a few states permitted interstate banking. Today, only a few states prohibit it. ■

Cancer Victim's Family Poured Grief into Film

Continued from Backpage

and follow-up continues for five years beyond that. In addition, weaknesses caused by the severe treatments can result in other cancers or illnesses.

One 11-year-old at the hospital has been through eight years of chemotherapy, including four relapses, Ms. Tilley says. Amputations may result, and radiation treatments may stunt growth or cause learning disabilities.

"Our focus is to make it [the illness and treatment] a part of their life, but not the controlling factor of their life," explains Ms. Tilley.

Typically, the first week is a terrible shock for the family. Batteries of medical tests for the victim, medical explanations for parents and child, a shattered routine, and fear of the prognosis result in families that are, Ms. Tilley says, "pretty much a wreck."

Once the diagnosis is in, a period of discussion begins about what it means, identifying resources and agencies that can help with the problem, and getting guidance on decisions about jobs, schooling, transportation, and family.

This is the period when the hospital will show the parents — and usually their older children — the "sibling film," the movie that helped make the Langfords aware of the subtle dynamics within the family.

The pressures would drain any family. Typically, mothers will stay with the sick child, which may mean being far from home and family. Fathers worry about the medical bills. Both parents are exhausted. Care of the other siblings may be farmed out, at least part-time, to friends and relatives.

Changes Are Permanent

Their lives will never be the same. Mrs. Langford says 85% of the parents of a child who dies wind up getting divorced. They often become intolerant toward other parents who are worrying about what they deem relatively minor problems.

The hospital stresses being honest with its young patients. Some of those with terminal illnesses may not want to talk about it, Ms. Tilley says. Others deal with it in different ways.

One motocross bike-racing champion, she recalls, began having dreams in which he lost every race. Others, near the end, may need "permission" from their parents to stop fighting and accept death.

"The children teach the parents a lot about living and dying. Most are givers rather than takers. They are very wise and giving to other people," she says.

The hospital encourages parents and siblings to stay with the victim, even sleeping overnight in the same room to lessen fears and isolation for victim and family alike. It offers sibling support groups and summer camps where siblings and victims can just grow and have fun together.

Still, Ms. Tilley says, the siblings often suffer a variety of problems, just like their parents: anger, resentment, isolation, guilt, fear of getting cancer, feeling left out, wondering if their ill brother or sister will die, feeling the victim is spoiled, jealousy, overprotectiveness toward the victim, and even getting into fights with others about, for example, the victim's loss of hair.

"Give them real support rather than mouthing 'I'm so sorry,' " Mr. Langford advises those who would help families in which cancer has struck. "Help them so they can get back to their family on a minute's notice:

" 'How can I help you, Ken? Is there something I can do for you? Have you got to get home today?' Give them real support, so you can make it easier at home.

"Don't avoid that family. Go to them. Don't make them feel ostracized.

"I've been a diabetic all my life. I was brought up [to believe] diabetics must take care of themselves. It took me into Lesa's death with the same feeling: You have to cope with it yourself.

"I think Lesa's death has turned that completely around. I believe, truthfully, that it has helped me — from the standpoint [of learning] that you can't do it all yourself." ■

Ex-Kidder Municipal Head Sets Up Investment Firm

NEW YORK — William G. Ferrell, who ran Kidder, Peabody & Co.'s municipal and public finance departments until last January, has started his own investment banking firm.

W.G. Ferrell & Co., based in Greenwich, Conn., will not be restricted to municipal finance, according to a statement issued by Mr. Ferrell. One of its initial assignments is developing an investment vehicle that will permit institutions and other investors to participate in global currency and debt markets.

Mr. Ferrell, an 11-year veteran of Citibank, headed the tax-exempt sales force there before joining Kidder Peabody in 1978. ■

CONSUMER FINANCIAL SERVICES

Tellers have been eliminated at the Hamden branch of Great Country Bank, replaced by representatives who provide services at individual workstations. 12

Customer demand for one-stop services has led Rainier Bank and others to open branches in supermarkets. And International Banking Technologies is helping them pursue their supermarket strategy. 6

A complaint department at Citytrust in Trumbull, Conn., has developed into a centralized location for product information. 7

A group of Kentucky banks are engaged in a credit card feud, enticing Louisville-area customers with suspended finance charges and annual fees, plus bonus points for purchases. 7

A series of Swiss television ads is promoting identity verification for depositors at a time when banking rules in Switzerland are being tightened to ensure that less and less illegally gained money is laundered through bank accounts. 7

Chemical Bank doubled to 18 the number of branches paying consumers $5 each time they wait more than seven minutes for a teller. 7

Marketing executives and issues must be given a prominent place on the agenda of a bank's planning retreats if these sessions are to yield profitable strategies, writes Barry I. Deutsch in Marketing Management. 4

Worth Repeating

I don't think banking will improve from the consumer standpoint until banks recognize that tellers are really their frontline people.

Sheri Pasqualoni, vice president at Great Country Bank, which has upgraded the teller position and eliminated lines. [Page 12]

Regulators Force Bankers Trust To Cut Earnings by $80 million

By JED HOROWITZ

NEW YORK — Bankers Trust New York Corp., which dazzled the banking community with $338 million of foreign exchange profits in fourth-quarter 1987, has been forced by regulators to cut those earnings by $80 million.

The unusual action by the Federal Reserve Bank of New York means Bankers Trust will file an amended call report for 1987 that slices foreign exchange trading income 24% for the fourth quarter to $258 million and to $513 million for the year.

The nation's eighth largest bank company said its restatement will have no material effect on its previously reported numbers because it also is reducing salary expenses for the quarter by $80 million.

In a statement, the bank said the salary giveback will come from bonus accruals that were "ultimately to be paid" but not yet announced to employees. Salary expenses for the fourth quarter after restatement were $212 million, the bank said.

Separately, Bankers Trust reported Wednesday that it earned $174.1 million for the second quarter of 1988, or $2.18 per share. The firm took a $554 million loss during the period last year, due to a special provision against possible losses on loans to developing countries.

In two key measures of profitability, the firm returned $1.21 on every $100 of assets and $22.39 on every $100 of

DEMOCRATIC NATIONAL CONVENTION

Lobbyists Out in Force in Atlanta

By ROBERT M. GARSSON
Washington Bureau

ATLANTA — Bank industry lobbyists remember Jonathan Sallet best for a long night he spent on Capitol Hill in March negotiating with Senate staff members in an effort to limit bank insurance powers.

Bankers were dismayed by the compromise reached that night, which was incorporated into the banking bill. They were even more upset that Mr. Sallet had been allowed in the room at all, since other lobbyists had been barred.

This week, Mr. Sallet has been at work on compromises of a different sort. A Democrat who has begun to play an active role in presidential politics, Mr. Sallet is at the Democratic National Convention as special counsel to the party's rules committee, which helped in a delicate set of talks between the Jackson and Dukakis camps.

The trade groups representing the financial services industry are here in force this week, some as Democrats working on presidential politics and others as lobbyists, working on the same legislative issues they pursue back in Washington. Some, including Mr.

2 Texas Banks Set to Merge With FDIC Aid

Minnesota Exec to Buy Resulting $8-Billion Firm

By BARBARA A. REHM
Washington Bureau

WASHINGTON — In a $675 million rescue plan, Texas American Bancshares Inc. and National Bancshares Corporation of Texas will merge, be recapitalized with cash from the Federal Deposit Insurance Corp., and then be sold to a prominent Minnesota banker.

The deal, announced in Dallas on Wednesday, combines the two companies to form Texas' fourth largest banking firm, with $7.8 billion in assets. The FDIC will recapitalize the new company with a $475 million cash infusion, but the agency will assume none of the company's assets.

Carl R. Pohlad, a 72-year-old Minneapolis financier who built his fortune in banking and bottling, will kick in $200 million.

Texas American, a $5 billion-asset institution in Fort Worth, and National Bancshares, a $2.8 billion-asset institution in San Antonio, both have nonperforming asset ratios of 13%.

Frank W. Anderson, a banking analyst with D. Latin & Co., Dallas, predicted on Wednesday that the two companies' second-quarter losses will exceed the first quarter's. Together, Texas American and National Bancshares lost more than $29 million during the first three months.

Mr. Pohlad is worth more than $550 million, according to the Forbes 400 list of the country's richest people. In addition to owning about 40 banks with a total of $4 billion in assets in the

IN THE NEWS

Freddie Mac Offers New Pool

WASHINGTON — The Federal Home Loan Mortgage Corp. introduced a new program that allows home lenders to securitize 15-year or 30-year fixed-rate mortgages into pools with a face value as small as $250,000.

Under the new MultiLender Swap Program, mortgages from several lenders are pooled together with mortgages purchased for cash by Freddie Mac. Each lender receives a Freddie Mac cash pool participation certificate representing its share.

The product is a response to "Fannie Majors," introduced by the Federal National Mortgage Association in January 1987. The Fannie Mae program allows lenders to pool small batches of mortgages together to form big pools, which can be securitized at more attractive rates. Lenders have securitized $8.1 billion worth of small mortgages using Fannie Majors since the program was begun.

Thorn Acquires Software Firm

NEW YORK — Thorn EMI PLC, London, is acquiring Financial Trading Systems Inc., New York, through its Thorn EMI North America unit, headquartered in Chelmsford, Mass. Financial Trading Systems is a privately held securities trading support software developer. The deal cost Thorn EMI about $35 million.

Financial Trading Systems will operate as part of Software Sciences, a division of Thorn Software. The acquisition is part of Thorn's push to establish a substantial Wall Street-based financial systems operation, active in trading systems and related institutional activities.

Among Financial Trading Systems' current offerings are a front- and back-office trade processing system and an institutional portfolio data management system. The company, which had revenues of $23 million in 1987, is a subsidiary of Drexel Burnham Lambert Inc.

Shearson Earnings Drop

NEW YORK — Shearson Lehman Hutton Holdings Inc. said it earned $51 million, or 51 cents per share, in the second quarter, down 20% from a restated $64 million, or 68 cents per share, a year earlier. Revenues in the second quarter were $2.53 billion, up from $1.7 billion in the earlier period.

Shearson's acquisition of E.F. Hutton last winter substantially increased both total revenues and operating expenses. The latter rose 54% in the quarter to $2.46 billion.

Shearson, like other large retail firms, said it suffered a slowdown in commission revenue. All of its revenue sectors showed gains, however, led by a 45% rise in investment banking fees to $395 million.

Household Buys Visa Portfolio

LOS ANGELES — Household Bank agreed to acquire the $38 million Visa credit card portfolio of troubled Beverly Hills Savings and Loan Association, Mission Viejo, Calif. The terms of the deal were not disclosed.

Household, based in Prospect Heights, Ill., is one of the 15 largest issuers of bank cards in the nation. The employees of Beverly Hills' credit card department will be offered jobs at Household's servicing facility in Irvine, Calif.

Beverly Hills, which has assets of $1.26 billion, was seized by thrift regulators in 1985 and is in the process of selling its operations. The credit card transaction is expected to be completed by July 28 if regulators approve.

Survey: Small Firms Looking for Bank Service

By DAVID NEUSTADT

NEW YORK — Service is increasingly important in winning the banking business of smaller companies, according to the findings of a Greenwich Associates survey of 15,888 companies with revenues from $5 million to $50 million.

Bankers have always used lending as the main way to win small business accounts, but that is no longer enough, according to David Fox, a partner in the Greenwich, Conn., market research firm. "Lending is still the No. 1 criterion, but there are so many competitors that you need to do more than offer a loan to win the day," he said.

Small companies, just like their bigger brethren, want other products besides loans, and they want quality service.

The study indicates that credit and service are becoming more equal considerations in a small company's selection of a bank.

In a similar survey in 1986, when companies were asked what was most important to them in a bank, credit-related factors were cited by 70%; 65% gave service-related answers. In 1988, credit-and-service-related answers were given equal weight — both were cited 67% of the time.

A bank's willingness to lend remained the most frequently cited consideration in choosing a bank, but it fell to 63% in 1988 from 66% in 1986. Meanwhile, more attention from the bank account officer was important to 60% of the companies in 1988, compared with 56% in 1986.

Even on a credit-related question — how companies select a bank for active credit use — the top answer was service oriented: the bank's ability to act quickly.

One finding of the survey indicates that banks may not be delivering service very well. Seventeen percent of the respondents received no visits from their lead banks in the past year, 13% received only one visit, and 16% got two visits a year. Thus, almost half the group got two or fewer visits from their lead bank in the past year.

Smaller companies in the group were more likely to be getting few or no visits, Mr. Fox said. He called it a mistake to decide those clients are not worth the effort.

"With inflation and real growth, which usually total 9% a year, a $10 million company is going to be a $20 million company in five to six years," he said. "Which makes more sense: waiting until the company gets big and trying to capture it as a client, or getting it now when it is not using many banks?"

The survey also found that unsecured lending is replacing secured lending, a sign of the increased competition among banks. "It's a signal of more aggressive lending," Mr. Fox said.

For example, 40% of the respondents now use confirmed lines of credit, up from 33% in 1985. Use of revolving loans that are convertible to term loans has more than tripled, to 20% from 6% in 1985.

Over the same time period, use of accounts-receivable loans fell to 18% from 32%, while use of inventory loans dropped to 15% from 26%. Among secured types of lending, only leasing increased, to 27% from 17%.

Offering unsecured loans and cutting prices are not the best ways to compete for business from small companies, Mr. Fox said.

"If banks provide a commodity, then price drives it; if they provide service, other things drive it as well," Mr. Fox said. "The account officer is the pivotal point in turning what banks can offer from a commodity into service." ■

More Small Firms Use Unsecured Lending

Survey finds drop in percentage of companies with secured loans

Unsecured	1985	1986	1987	1988
Confirmed line of credit	33%	45%	41%	40%
Revolving loan convertible to term loan	6	12	18	20
Nonrevolving term loan	7	8	18	19
Secured				
Equipment loans	39	39	38	39
Leasing	17	19	27	27

Former MTech Chief Hopes for Another Winner

Darwin Deason's Start-Up Will Handle Data Processing for First Texas Financial

By JEFFREY KUTLER and DAVID LaGESSE

Darwin Deason, the entrepreneur who built MTech Corp. into one of the largest bank data processing companies, has started what he hopes will become a computer services empire.

The former MTech chairman leads an investor group that is forming a new company, Affiliated Computer Systems Inc., which will take over the data processing activities of First Texas Financial Corp., a Dallas-based thrift holding company.

Mr. Deason is chairman and chief executive officer of Affiliated. Charles "Chick" Young, a former MTech division president, is president and chief operating officer.

The investor group includes Gibraltar Savings Association, Houston, a subsidiary of First Texas.

Affiliated is acquiring three computer-related business units of First Texas: the MoneyMaker division, which markets automated teller machine services; TransFirst Corp., a processor of ATM and other electronic transactions; and First Texas Computer Corp., which does the data processing for 1.5 million customer accounts of Gibraltar Savings and First Texas Savings Association, Dallas.

Mr. Deason said he expects to use the First Texas business as a nucleus around which to expand Affiliated. In that way he is attempting to repeat his earlier success with MTech, which had sales of $237 million in 1987.

Affiliated's mix of businesses — basic data processing augmented by more specialized, electronic transaction services — is similar to MTech's, though on a smaller scale. MTech provides software and computer services to several hundred banks and operates the 1,200-machine Mpact ATM system.

The company name is the same as that of the firm Mr. Deason founded in 1968, which later became known as Mtech. In 1976, Mr. Deason sold the original Affiliated Computer Systems to Mercantile Texas Corp., a Dallas-based bank holding company that was its major customer. Affiliated changed its name to MTech when Mercantile became MCorp.

Mr. Deason left MTech in April 1988 after MCorp, in a move to raise capital, agreed to sell its 80% stake in the data processing company to Electronic Data Systems Corp. for $234 million. EDS, a subsidiary of General Motors Corp. also based in Dallas, acquired the remaining shares of MTech in June.

Mr. Deason, 48, reportedly made about $6 million himself from the sale of MTech. He is investing part of that in the new company, along with Gibraltar and other unidentified investors, and eventually might seek to take the company public.

MTech and its new parent, EDS, apparently did not secure a no-compete agreement from Mr. Deason when he left the company, and the First Texas acquisition gives Mr. Deason a foundation on which to compete with his former employer.

Mr. Deason has already approached a number of other financial institutions as potential clients for his venture, but he could run into a legal fight if he solicits MTech clients, sources said.

Sources familiar with the negotiations between Mr. Deason and First Texas said the investor group would hold a controlling interest in the voting stock of Affiliated. First Texas would retain a majority share of the profits from current contracts, but that mix would change as new business is gained under Mr. Deason's leadership.

When the formation of Affiliated was announced earlier this week, Mr. Deason issued a statement saying, "This is a very exciting opportunity. ACS begins its operation with a strong financial base and employees of exceptional skill and talent.

"Furthermore, TransFirst and First Texas Computer Corp. make a perfect fit. The combination of their financial institution processing systems with the TransFirst/MoneyMaker EFT [electronic funds transfer] products results in a complete product offering . . . to other financial institutions and businesses."

"TransFirst has been exceptionally successful during its initial development and is now ready for broader ownership and management," said J. Livingston Kosberg, chairman and chief executive officer of the Gibraltar and First Texas associations. "Darwin Deason and his investor group bring a proven and most successful management team plus considerable future business opportunities."

The MoneyMaker network of 900 ATMs, most of them in Texas 7-Eleven stores, handles more than three million transactions per month.

First Texas' MoneyMaker division provides ATM support services to 85 other financial institutions with 135 ATMs in Texas, Arkansas, and Louisiana. ■

Using the Strategic Planning Retreat Profitably

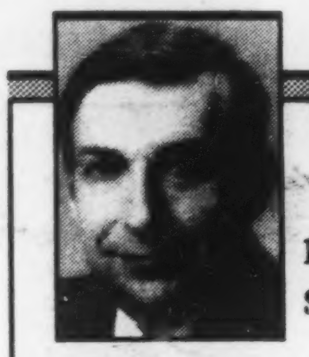
By BARRY I. DEUTSCH

SOME COME with outside speakers to help broaden perspectives. But some organizers believe in keeping the circle closed. Some have built-in breaks for recreation to help develop the teamwork needed for the rest of the year but some are organized so that noses are to grindstones at all times.

My favorites include late-night games of chance, although I'd have to admit that the only times I've ever profited from these was when I had an associate whose judgment at the backgammon table diminished at the same pace as the ingredients of the bottle of Irish whiskey at his side.

If Theodore Roosevelt had been director of marketing instead of President of the United States it would have been strategic planning retreats, not the presidency, that he would have called lovingly his "bully pulpit."

Many of the vital issues confronting managements that are serious about the concept of strategic planning are, if not marketing issues, issues that can be better understood in marketing contexts. And, it is at the planning retreat — a staple in anyone's planning process — that the marketing director can most effectively focus attention on the marketing agenda.



Deutsch Says:

Becoming a true low-cost producer means determining to provide less service for less cost, appealing to bargain seekers, and enjoying the rewards of low margin offset by high volume.

Don't make a mistake. There is a sufficiency of particularistic marketing issues: promotional strategies, product-naming approaches, centralization of marketing support, institutionalizing cross-selling. But particularizing is not the best use of the bully pulpit.

Who's *Really* Market-Driven?

The planning retreat, whether held on-site or off-site, with or without poker, provides the best opportunity for the issues-aware marketing director to force an organization to confront the degree to which it is market driven in the broadest possible terms.

It's expected, almost as a matter of course, for a modern financial services company to claim to be market driven — and many are. The litmus test is whether the organization is easily led to recognizing its vital issues as marketing issues.

The question of where to compete, selecting geographic markets to enter, or market segments to address, is a marketing issue because the likelihood of success is greatly enhanced if the target markets are better understood. The appropriate use of marketing, moreover, might well help avoid a frequently encountered strategic error, that of entering markets where there is either no profitability or little chance of success.

The marketing director needs to force the discussion beyond the numbers and beyond the cliche of "We have to do it, just to fly the flag." The discussion has to move, for example, to the competitive environment, likely competitive reaction, and whether the company will have the ability to influence prices, and therefore, profitability.

Taking a Firm Stand on Product, Price

The question of how to compete is another line of strategic thought for the the marketing professional. The bank must be led to a point of view couched in conceptual marketing terms. The issue breaks down into two subsidiary questions, the articulation of a product strategy and a pricing strategy.

Planning processes nurture words as much as they do concepts. The phrase in vogue a few years ago was "niche strategy." That it was little understood and less well practiced is beside the point.

The point is that niching is viable if we define niches carefully. Too many times, the concept has been put into practice as a random walk through a list of products.

It doesn't work to offer a few products that might appeal to certain users. It works better to become known, for example, as a bank for health care providers, local governments, or whatever — as long as we agree to take the time to learn all there is to know about health care, local government, or whatever — so that we can position ourselves to succeed in those niches. It also means understanding the competition in the niche because no niche is unoccupied and in some we will encounter players rarely seen on the broader stage of the mass market.

How to compete also means addressing the age-old question, do I want to be a low-cost producer or an adder of value? Many planners will overlook the obvious conclusion that the two approaches are meant to be mutually exclusive. A bank can't be both.

Becoming a true low-cost producer means determining to provide less service for less cost, appealing to bargain seekers, and enjoying the rewards of low margin offset by high volume.

Becoming a value adder is different. It means providing quality at higher prices and accepting lower volume but commensurately higher margins. What happens if you mix and match?

Quality of Service Comes at a Price

The profitability-measurement staff will blow the whistle on the low-price-/high-quality combination because the financial result will speak for itself. I've got to admit that I know there are marketing directors who don't understand the error of this approach. The zeal with which many are embracing the quality-customer-service movement is not always matched by an understanding that there needs to be a price paid for quality.

The high-price/low quality cell of the matrix should fail on its own. Whatever one's view of the value of market share, it is clear that no company can operate without customers and high prices matched with low quality of performance subtracts down to no customers.

Despite the tightness of the tautology, I am amazed at how many banks try to get away with defying it. It's an issue that cries out for full review during the strategic planning retreat.

After we've licked where to compete and how to compete, we're still left with another key strategic issue whose marketing implications are often overlooked, how to assemble the business. The marketing director has an important contribution to make in framing the organization's merger and acquisition strategy, an important byproduct of the larger strategic process.

There is a mystique to the process of doing deals. When the M&A rubber meets the investment banker's road, the marketing director is often left in the hallway watching the action through cracks in the closed door. Often marketing is called in only at the point where someone wants to get 100 copies of the tombstone embedded in lucite.

Before it gets to that point, however, there could well be some important strategic discussion revolving around the questions of targeting acquisitions. Its important to understand the why of the merger and acquisition activity.

Mergers with a Purpose

Among the objectives might be achieving easier entry into certain markets, building sustainable competitive advantage, achieving economies of scale, enhancing profitability, achieving market-share goals, positioning the organization for further growth, or protecting the acquiring organization from takeover.

All of the above might be valid in individual cases. The strategic planning

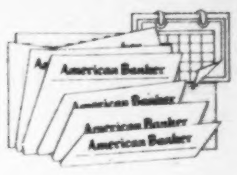
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- The tentative platform for the third party led by presidential candidate Henry Wallace called for nationalization of "the largest banks, along with the railroads, the electric power and gas industry, and industries dependent on government funds and purchases." The tentative platform draft said "the cure for the excesses of private monopoly is democratic control through public ownership."
- The report of the Johnston Committee, headed by Percy H. Johnston, chairman of the executive committee of the Chemical Bank & Trust Co., recommended a "virtual 'green light' " for Japan's economic recovery, including a more realistic exchange rate and the removal of obstacles to foreign private investment. The committee, commissioned by the Department of the Army to visit Japan and Korea and make recommendations for the improvement of their economies, also urged that Japan's products be admitted to the world's markets if they were fairly competitive and fairly marketed. The committee further urged that Japan import its food from sources cheaper and closer to it than the United States.

20 Years Ago

- President Johnson nominated Irvine H. Sprague, a member of his White House staff, to fill a vacancy on the board of the Federal Deposit Insurance Corp. Mr. Sprague, whose background was in politics and journalism and who had no previous banking experience, came to Washington in 1957 to serve on the staff of Rep. John J. McFall, D-Calif., and left the post in 1963 to serve as California's deputy director of finance.

10 Years Ago

- The General Accounting Office told a House subcommittee that federal law enforcement agencies could accept a substantially reduced role in bank robbery cases without impairing investigations or reducing the number of prosecutions. It was also learned that the GAO was preparing a report on bank protection devices that probably would recommend that banks be required to install more monitoring cameras.

5 Years Ago

- Treasury Secretary Donald T. Regan defended before Congress an administration proposal to expand bank and thrift holding company activities, saying it would benefit consumers and would not lead to a disaster such as the one that following the 1929 stock market crash. Worries about another crash, Mr. Regan said, were "overblown" because financial markets in the 1980s are more sophisticated, more technologically advanced, and are overseen by a more powerful federal regulatory system.

1 Year Ago

- Citicorp posted the largest domestic bank loss — just under $2.6 billion — which it had predicted when it announced a $3 billion special provision to its reserves for possible Third World loan losses in the second quarter. Among other major banks that posted losses attributed to increased loan-loss reserves were Bankers Trust New York Corp., $554 million; Manufacturers Hanover Corp., $1.37 billion; Security Pacific Corp., $172.4 million; and Bank of Boston Corp., $83.7 million. First City Bancorporation of Texas, Houston, posted a loss of $116.4 million for the quarter, which it attributed to mounting real estate problems and Third World loans. First RepublicBank Corp., Dallas, announced a loss of $313.2 million, attributed primarily to international loans.
- Alan Greenspan told the Senate Banking Committee at his confirmation hearing for Federal Reserve Board chairman that he favored expanded bank powers but would be uncomfortable acting without more guidance from Congress.
- Security Pacific Corp., Los Angeles, won approval from the Fed to acquire Rainier Bancorp., Seattle.

Earnings declined at Great American First Savings Bank and CalFed, while increasing at H.F. Ahmanson and the Imperial Corporation of America, all in California. ___ 10

COMMENT

Regulatory vigilance will do more to restore health to the nation's thrift industry than blaming the economy, says House Banking Committee Chairman Fernand J. St Germain. 4

THRIFTS & MORTGAGES

Home mortgage originations plummeted 37% in the first three months of this year. ___2

Though asset size is often dismissed as a measure of accomplishment, the growth at seven-year-old County Savings suits bank chairman William J. Levy just fine. ___6

HUD received 909 letters on the rewrite of the 14-year-old Real Estate Settlement and Procedures Act. ___6

Gibraltar Savings is offering a package of features for its adjustable-rate mortgages that includes charging lower interest rates to the thrift's most creditworthy borrowers. ___7

Marking short-term investments to market should not hurt thrift institutions that actively manage portfolios, writes Joseph C. Hu. ___4

Worth Repeating

I tried to talk about it, but the bankers didn't seem disposed to that. They want to fight, and so I am forced to oblige them.

Rep. John D. Dingell, D-Mich., chairman of the Energy and Commerce Committee, when asked if he had tried to compromise with the banking industry on new powers. [Page 2]

Japanese Run 6 of Top 10 ATM Systems

Foreign Banks Own Biggest Networks

World ATM rankings at yearend 1987

Financial institution	Country	Cards (mil.)	Machines
1. Post Office Savings System	Japan	9.7	6,036
2. Dai-Ichi Kangyo Bank	Japan	4.9	4,976
3. Mitsubishi Bank	Japan	7.8	4,747
4. Sumitomo Bank	Japan	6.4	4,008
5. Credit Agricole	France	6.1	3,467
6. National Westminster Bank	England	4.6	2,389
7. Trust Bank System	Japan	1.1	2,379
8. Taiyo Kobe Bank	Japan	2.7	2,051
9. Lloyds Bank	England	4.4	1,900
10. TSB Group	England	3.3	1,787
Leading U.S. Banks			
14. Bank of America	U.S.	3.9	1,358
15. First Interstate Bancorp	U.S.	4.3	1,355
19. Citicorp	U.S.	1.9	1,281
20. Wells Fargo Bank	U.S.	2.1	1,204

Source: *The Nilson Report*

By JEFFREY KUTLER

NEW YORK — Japanese institutions not only dominate the ranks of the world's largest banks, as the *American Banker* reported earlier this week. They also own more automated teller machines than do banks in any other country.

Six of the 10 largest proprietary, or single-bank, ATM networks in the world, including the top four, are Japanese. Other positions in the top 10 are held by French and British banks.

Bank of America, which owns more ATMs than any other U.S. bank, ranks only 14th. First Interstate Bancorp is 15th, Citicorp 19th, and Wells Fargo Bank 20th.

The standings appear in a directory, just published by *The Nilson Report*, listing more than 1,000 ATM systems in 81 countries. H. Spencer Nilson, publisher of the Los Angeles-based newsletter, made an advance copy of the 220-page, $650 directory available to the *American Banker*.

Mr. Nilson and his staff counted 80,933 ATMs in Japan at yearend 1987, 17,068 more than the 63,865 in the U.S., which is the second largest country in terms of ATM population.

Third on the list is England, with 12,520, or only one-fifth of the U.S. total, followed by France at 11,895. No other country has as many as 8,000 ATMs.

Mr. Nilson's U.S. estimate of less than 64,000 ATMs is well below the 68,000 to 70,000 that other researchers — notably Linda Fenner Zimmer of Marlborough, Conn., and the Chicago-based newsletter, *Bank Network News* — have tallied. Mr. Nilson claims he is more careful than the others to reconcile manufacturers' orders with actual installations by banks.

Mrs. Zimmer has said that the average ATM in the U.S. handles 5,000 to 5,500 transactions per month, and that this figure fell in recent years as ATM

Futures Group Trying to Woo Bankers

By JED HOROWITZ

NEW YORK — After last October's crash, some futures and options traders grumbled that banks had abandoned them when they needed quick cash to pay their margins. Now, a group organized by futures exchange clearing houses is taking a more formal approach to woo lenders back into the futures fold.

The Clearing Organization/Clearing Bank Roundtable is planning a group of seminars to educate lenders about the clearing and settlement system. The group was formed by the Chicago Mercantile Exchange and the Board of Trade Clearing Corp. after the market crash, to improve communications among exchanges, banks, and regulators.

Various government-sponsored reports criticized exchange clearing houses and banks for failure to coordinate their clearing and settlement procedures during the October tumult.

The purpose of the seminars, which are still in the planning stage, will be to educate banks on "how futures and options exchanges work, what sort of financing arrangements exist, and how they might be expanded," said John Davidson, senior vice president and head of the Chicago Mercantile Exchange's clearing house. The sessions are expected to be held in early fall.

In particular, clearing house executives are hoping that banks will be more eager to accept options on securi-

Small footprint.

Small, but mighty. That's Diebold's 1060 Everywhere Teller Machine . Its small footprint makes a big impression. In supermarkets, hotels, dorms, factories. At work or at play. Anywhere your customers are. You can put cash withdrawal, balance inquiry, and funds transfer services within their reach at a cost that's within yours.

Big advantages.

Make low- to moderate-volume sites profitable, add additional cash dispensers at high-volume ATM sites. Reduce congestion at teller windows, off-load routine transactions, improve teller productivity. Test off-premise expansion in new markets, introduce bank-at-work programs to area businesses.

Make a small footprint soon. With big results.

Marking to Market for Active Mortgage Portfolios

By JOSEPH C. HU

Constant monitoring and rebalancing of the portfolio are necessary to ensure that the arbitrage continues to perform as originally planned.

— Joseph C. Hu
Executive Vice President
Shearson Lehman Hutton Inc.

IN EARLY June, the Federal Home Loan Bank Board issued a proposed regulation for public comment that would require all FSLIC-insured thrifts to account for securities held for investment, sale, or trading using generally accepted accounting principles.

In an effort to encourage thrifts to develop strategic policies for their securities investments, the Bank Board proposed to distinguish and therefore account for thrifts' investment activities by their intent and ability to hold the securities. Those securities held for long-term investment would be carried on an institution's books at amortized cost; those for trading, at market value; and those for sale, at the lower of amortized cost or market value.

In the past, a clear distinction has rarely been made among investment, trading, and sale accounts. The issue of mark-to-market (at least for assets already on the books) has long been emotionally debated between the regulator and the thrift industry.

Looking forward, however, sound management of a mortgage portfolio — either for long-term investment or short-term gains — requires frequent trading of parts of the portfolio whenever market conditions change, in order to achieve the originally stated objectives. Furthermore, recently created derivative mortgage securities have provided managers with opportunities for effectively hedging the value of their mortgage portfolios.

As a result, the market value of hedged portfolios will have limited fluctuations when interest rates vary. Marking these portfolios to market, therefore, should not have significant balance-sheet consequences.

Unlike other fixed-income debt, mortgages are prepayable at par at any time. In a declining interest rate environment, this feature results in rising prepayments that not only limit the portfolio's appreciation but also reduce its originally stated cash-flow yield.

Conversely, as market interest rates rise, prepayments slow, prolonging the portfolio's expected maturity and rendering heavier principal losses than other nonprepayable securities. Because of this feature, a mortgage portfolio requires active management to achieve desirable yields.

Active management includes frequently trading parts of the portfolio as relative values among various coupons change according to market interest rates and housing fundamentals. Managing a mortgage portfolio without trading can only be detrimental to its potential performance and involves a level of risk inconsistent with the stated goals of the proposed regulation.

Trading Strategies

- Enhancing returns through dollar rolls: Unique to the mortgage securities market is its forward-delivery mechanism. Mortgage origination is a time-consuming process. This feature provides interest rate protection for originators.

Taking advantage of forward delivery, an investor can roll securities out of his portfolio for current-month delivery and simultaneously buy them back at lower price for forward delivery. This price differential, after taking prepayments into consideration, can be viewed as a cheap method of obtaining short-term financing. Managers can enhance the annual return of a mortgage securities portfolio by at least 50 to 75 basis points by constantly doing dollar rolls.

- Increasing yield with arbitrage transactions: Another popular means of enhancing portfolio yield is the arbitrage transaction in which thrifts fund the purchase of mortgage securities with short-term repurchase agreements. To reduce interest rate risks in these transactions, a thrift enters into an interest rate swap agreement to pay fixed rates (a series of Treasury yields plus a spread) in return for a rate pegged to an index (usually Libor).

Even though this arbitrage is a long-term investment, the portfolio needs constant adjustment of both assets and liabilities. Varying prepayments through time inevitably change the expected duration or average life of the remaining mortgage assets. Constant monitoring and rebalancing of the portfolio are necessary to ensure that the arbitrage continues to perform as originally planned.

- Hedging with derivative mortgage securities: Over the past year, large amounts of derivative securities have been created, including stripped interest-only securities, fixed-rate collateralized mortgage obligation residuals, CMO superfloaters, and excess servicing. All these securities are fundamentally bearish and are ideal vehicles for hedging against rising interest rates.

Long-Term Assets

Unlike options and futures, these are long-term assets that provide positive, albeit minimal yield while performing the hedging function. Because of this feature, they have been purchased increasingly by thrifts to hedge their overall mortgage portfolios or to use in arbitrage transactions.

At the same time, derivative securities tend to stabilize the market value of the portfolio because their value always moves in the opposite direction from the hedged assets. Strategic use of derivative securities and active trading are important to the performance of mortgage portfolios.

More important, they foster the discipline of mark-to-market without significant balance-sheet consequences. For thrifts that are willing to manage their portfolios actively, mark-to-market should help distinguish their competitiveness in attracting equity capital and the performance of their stock. ■

REQUIRED READING

What Signals Is Congress Sending to Regulators?

Following are excerpts from opening remarks delivered July 7 by House Banking Committee Chairman Fernand J. St Germain, D-R.I., at oversight hearings on the condition of the thrift industry.

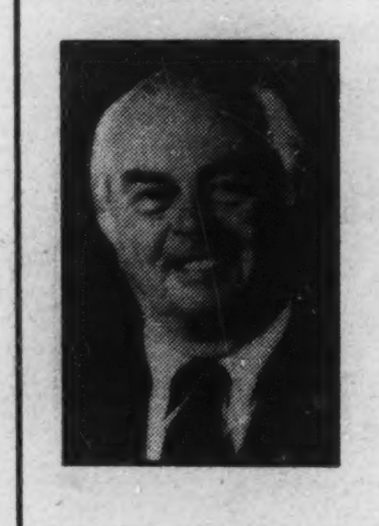
□

NO ADMINISTRATION headed for retirement likes to talk about unsolved problems. That's the next guy's headache after the optimistic scenarios fade like the first rose of summer.

Perhaps this syndrome explains some of the growing tendencies of the Home Loan Bank Board to come up with upbeat explanations and the most comforting projections — billions below the cautious conservative analysis of the General Accounting Office and less than half what many respected private analysts believe it will cost to straighten out the mess over the next five years.

This committee needs to try and make sense out of the multibillion dollar variations in the numbers, but it is also imperative that we make certain that the supervision of savings and loans is in place and that new situations — future candidates for bailouts — aren't being created.

Too often, problems in the savings and loan industry are explained away with a few well-chosen cliches about oil prices and sagging economies. No question that economic conditions are a substantial factor, but it is naive to think this is the whole story. Some of the problems are just plain old-fashioned mismanagement, insider dealing, fraud, and high-flying excesses — exacerbated by lax supervision and hesitant enforcement.



Too often, problems in the savings and loan industry are explained away with a few cliches about oil prices and sagging economies . . . but it is naive to think this is the whole story.

— Fernand J. St Germain
Chairman
House Banking Committee

No one can look at the looting of Vernon Savings and Loan in Texas and conclude that economic conditions created that mess. Oil at $30 a barrel wouldn't save that kind of operation.

In California, the regulators let a mailbox operation get started and flourish — American Diversified — with no retail outlets. Just a mailbox — fully insured by the FSLIC — that received deposits from around the country. This outfit grew an unbelievable 7,000% in 18 months — from $11 million in mid-1983 to $792 million at yearend 1984.

These are not happenings in the distant past. They began and grew in recent years — in the 1980s. Where were the regulators? What did they know? What did they do about it, if they knew? How many of these situations are out there now?

Are the same examiners and supervisors who missed Vernon's shenanigans still in place? More important, is the same regulatory mind-set in place? Some recent incidents raise serious questions about just what kind of signal is being sent to the regulatory troops.

With the Texas cleanup still underway, suddenly this spring Joe Selby was dropped as director of regulatory affairs for the Dallas Home Loan Bank.

Japan, with Biggest Banks, Is Country with Most ATMs

➛ **Continued from Page 1**

systems expanded faster than consumer demand. Mr. Nilson found the average ATM to be doing only 4,225 transactions per month.

He projected that ATMs in the U.S. will grow to 91,000 by 1995, 42% above his 1987 figure, while installations worldwide, including the United States, will increase 57% to 356,000.

U.S. banks excel in the sheer number of networks — 609, or 57% of the 1,062 proprietary and shared systems in the global Nilson directory. This is a function of the size of the country and of the relatively large number of banks in the United States.

This country lacks the nationwide branching tradition — and concentration of banking assets in a handful of large institutions — common to most other industrialized countries. The largest bank-owned ATM systems in such countries as Japan, England, France, and Canada have been integrated by those nations' largest financial institutions with extensive, full-service branch networks.

The correlation of market size with ATM-network size also shows up in the United States. Four of the nation's six biggest ATM owners are based in California, the most populous state and one that allows unlimited branching. These institutions are Bank of America, First Interstate Bancorp, and Wells Fargo Bank — all in the top 20 — and Security Pacific National Bank at No. 37.

Besides the California companies and New York-based Citicorp, the only other U.S. institutions among the world's top 40 ATM owners are Bay Banks Inc., Boston, in 33d place, with 792 machines, and First Texas Savings Association, Dallas, in 35th place with 750.

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

Get early morning access to today's American Banker news stories, commentaries and tables through several electronic services. Most services update the database by 12:01 a.m. on the day of publication. Included in the electronic version are complete speeches presented by industry luminaries, banking regulations, and other documents not published in the paper.

Two electronic versions of American Banker are available:

AMERICAN BANKER NEWS — Easy-to-use, containing the major stories and columns appearing in today's paper; available through DIALOG Information Services (800-334-2564) as file BANKNEWS.

AMERICAN BANKER FULL TEXT — The complete content of every day's paper back to 1981; updated daily. Available through Data-Star (215-687-6777); DIALOG Information Services (800-334-2564); Finsbury Data Services (212-493-7128); NewsNet (800-345-1301); and NEXIS (800-227-4908).

Selected stories may be indexed and summarized in FINIS, a database produced by the Bank Marketing Association (800-433-9013).

For further information on accessing American Banker on line, please call DATABASE SERVICES at (212) 943-6303.

Growth Fastest Overseas

The United States has abdicated its former status as the leading ATM market in the world — to Japan in total number of machines, and to several European and Pacific Rim countries in terms of market growth.

Diebold's worldwide market share, including machines sold under other names, equals 16.1%.

ATMs in the United States grew only 8% in the two years since *The Nilson Report*'s previous survey. In the 18 other countries with at least 1,000 ATMs, the numbers of machines increased by double-digit or triple-digit percentages except in 15th-ranked Scotland, which grew 8% to 1,740, and 17th-ranked Hong Kong, which fell 2% to 1,211.

Italy, seventh on the country list, with 5,658 ATMs, and Germany, eighth, with 5,396, each doubled their totals in two years.

Japan and the United States together account for 64% of the world ATM market, down from 72% in 1985. This means that other countries are catching up: ATM growth rates in Spain (63%), Canada (69%), South Africa (81%), Australia (84%), and Switzerland (53%), for example, are higher than in both the United States and Japan.

Japan, at the top of the 1985 listing with 63,867, compared with 59,075 in the United States, managed to grow in ATM installations by 27% since the last Nilson publication, or more than three times the U.S. rate.

Strong as they have become in electronic banking, Japanese institutions do not dominate the ATM rankings as much as they do the *American Banker*'s list of the 500 largest banks by deposits. As of yearend 1987, all of the top 10 banks and 17 of the top 25 are Japanese.

None of the top 25 world banks are based in the U.S., but four of the top ATM-owning banks are. Nine of the Nilson top 25 ATM owners are Japanese banks, five are British, and three are French.

The Japanese have done the most to integrate ATMs into their basic operations. Most Japanese ATMs are inside bank offices, where they provide an alternative to waiting in line for human tellers, and are accessible for less than the 24 hours a day that American ATM users have come to expect.

At the top of the ATM-owning list is the Japanese post office. In administering a savings program to which almost the entire population subscribes, the post office has installed 6,036 ATMs.

Three other Japanese banks, all among the five largest in the world, each have between 4,000 and 5,000 ATMs: Dai-Ichi Kangyo Bank Ltd., Tokyo; Mitsubishi Bank Ltd., Tokyo; and the Sumitomo Bank Ltd., Osaka.

Credit Agricole, the French cooperative bank, has 3,467 ATMs to rank fifth in the world, and National Westminster Bank, London, ranks sixth with 2,389. Bank of America, in 14th place, has 1,358 machines, or 1,031 fewer than National Westminster.

NYCE Is No. 2 Shared Network

The American ATM industry rises closer to the top in the ranking of shared networks. The New York Cash Exchange, known as NYCE, with 5,780 ATMs at yearend, is second only to the 7,124-machine Carte Bleue system in France and ahead of a 5,390-machine system that ties most of the German financial community together.

NYCE is one of 16 U.S. shared networks among the world's top 25. Among the others are the California-based Star System, Texas-based Pulse, and Pennsylvania-based Mac. Only 4 of the top 10 are not U.S. networks: Carte Bleue in France (ranked No. 1), the German pool (3), Interac in Canada (4), and Bancomat in Italy (9).

Of the 34 shared networks consisting of at least 1,000 machines, 19 are American, including No. 34, the Louisiana-based Near network, at 1,092.

U.S. banks formed so many regional networks because interstate banking was not legal until recently. By the time some states began to dismantle their branch-banking barriers in the 1980s, shared ATM networks had become a principal means for banks to expand their service areas.

Japan, which has 27% more ATMs than the U.S., has only 13 networks, or one for every 47 in the U.S.

Austria, Denmark, Germany, Italy, Korea, and Thailand, each have only one electronic banking network listed in the Nilson directory.

Diebold Tops in Market Share

In the supplier portion of his survey, Mr. Nilson found Diebold Inc., Canton, Ohio, to have manufactured more ATMs than any of its competitors. Diebold held onto that lead since the previous survey despite claims by NCR Corp., International Business Machines Corp., Fujitsu Ltd., and others that they have been replacing Diebold machines at an accelerating pace.

Diebold's worldwide market share, including machines that it manufactures for sale under other companies' names, equals 16.1% of the 226,361 ATMs.

NCR is second at 15.2%, followed by Fujitsu at 10.9% and IBM at 10.4%. All others, including the Japanese vendors Omron and Toshiba and the French companies Groupe Bull and Dassault, are in single digits.

Counting machines that Toshiba makes for NCR to sell in the Japanese market, NCR's installed base rises to 43,619 ATMs or 19.3% of the world market.

Diebold continues to draw its greatest strength from the home front. Of the 63,865 ATMs in the U.S., Diebold's share is 46.1%, up from 43.7% in 1985, according to *The Nilson Report*. NCR is second at 19.9%, IBM is third at 18.7%, and Docutel Corp. — no longer active in the market — is fourth at 9.8%.

In all of North America — the U.S., Canada, Mexico, and the Caribbean — Diebold's market share fell 1.4 points in two years to 41.9%, the survey said. IBM has sold 22.3% of the 71,062 machines in those markets. NCR is third in North America at 19.7%.

Japan and the United States account for 64% of the world ATM market, down from 72% in 1985.

The Japanese vendors Fujitsu, Omron, and Hitachi dominate the 86,699-machine Asian market with regional shares of 25.4%, 19.6%, and 14.5%, respectively. NCR is the biggest in Europe at 26.9% of 55,425 machines, followed by 23.4% for IBM, 11.1% for the German manufacturer Nixdorf, and 9.3% for Olivetti of Italy.

IBM is tops in Australia, New Zealand, and the South Pacific, with 57.2% of the 4,616 machines installed there; in Africa, with 32.8% of 4,183 machines; and in Central and South America, with 33.3% of 3,258 machines. ■

Pension Management Co. Sets Compliance Seminar

NEW YORK — Pension Management Co., King of Prussia, Pa., has scheduled its 12th annual national compliance seminar for managers of Keogh plans, individual retirement accounts, and similar retirement plans.

The seminar will be held Oct. 3-7 at the Omni International Hotel, St. Louis.

Pension Management is a research, consulting, and publishing concern that specializes in helping financial institutions deal with the marketing and administration of pension plans. It claims a client base of 1,300 institutions around the country.

For more information, contact the company at 215-251-0360. ■

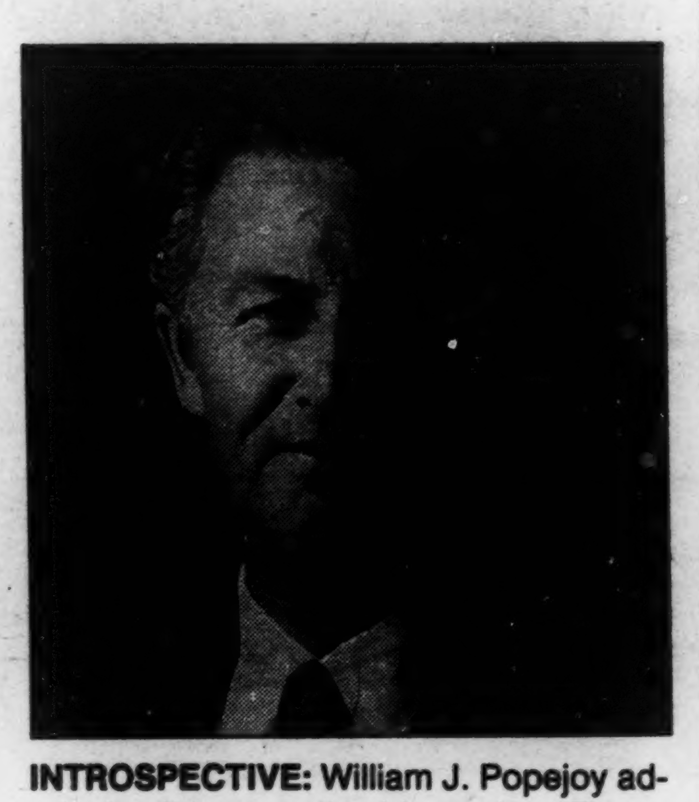
Popejoy Rates His Performance

By MICHAEL A. ROBINSON and ROBERT LUKE

West Coast Bureau



INTROSPECTIVE: William J. Popejoy admits he did not realize his goals at Financial Corporation of America.

IRVINE, Calif. — With two successful turnarounds under his belt, William J. Popejoy arrived at the Financial Corporation of America four years ago confident he could conduct the biggest recovery in the history of the savings and loan industry.

Now, just days before he expects FCA's deeply troubled American Savings and Loan Association subsidiary to be sold with federal assistance, an introspective chairman and chief executive gave an "unsatisfactory" rating to his overall job performance.

"I did not achieve that which I de-

COMMENT

A Peer-Group Analysis Of 1987 Bank Earnings

By SANFORD ROSE

As has been noted before in this column, the First Manhattan Consulting Group has pioneered an approach to peer-group analysis that classifies banking companies according to their business mix as opposed to their size, location, etc. Thus the 249 bank holding companies with assets of over a billion dollars are divided into six distinct types of entities: fee-based banks, consumer intermediators, commercial financiers, low-cost funders, money center banks, and a residual category — the undifferentiated group; that is, banks with no ostensible balance-sheet or income specialty.

The consulting firm has just released 1987 figures for each of these six types. The figures show the median return on equity, adjusted for special loan-loss provisions and for certain types of nonrecurring earnings.

Additionally, ROEs are normalized for leverage. That is, a bank's return is what it would have made if its ratio of equity to assets in 1987 had been the same as the average of the top 249 banks (6%). Also

Japanese Banks Far from Top In Equity Rank

Asset Leaders Missing From Top 25 Companies

By JOHN J. DUFFY

London Bureau

LONDON — Japanese banks continue to dominate the rankings of the world's largest banks in terms of assets, but they drop significantly when ranked in terms of equity capital.

Nine of the ten largest banks — and 17 of the top 25 — are Japanese, according to the *American Banker* annual ranking of the world's 500 largest banks in terms of assets. Yet when ranked in terms of equity capital, not one Japanese bank is listed among the top 25. The *American Banker* publishes its first table of equity rankings today, on page 44.

Ranking by equity has become an increasingly important way to measure banks' international standing now that regulators have agreed to implement common capital-adequacy standards. The standards will require that international banks have capital equal to 8% of their total risk-adjusted assets — and pure equity capital equal to 4% of risk assets — by yearend 1992.

By such standards, the Japanese appear to have a long way to go.

Dai-Ichi Kangyo Bank Ltd. again took the top spot as the world's largest bank, with total assets of $345 billion in 1987 — an astounding one-year increase of more than $106 billion. To put such an increase in perspective, $106 billion amounts to more than the combined total assets of Bankers Trust Co. and Security Pacific National Bank.

Rankings in terms of equity tell a far

Continued from Page 1

shown is the median adjusted ROE for the top 25% of banks in each peer group.

Last year, the consumer-intermediator group registered the highest median adjusted ROE, 15.1%. Fee-based banks and commercial financiers tied for second place with a 14.9% return. Low-cost funders came in with a 14.1% ROE, while the undifferentiated group recorded an 11.3% return. Rounding into last place were the money center banks, with an anemic 6.7% ROE.

Last year's rankings differ somewhat from those of 1986. In that year, the fee-based group was the premier earner, with a 16.3% median adjusted return, followed by the consumer intermediators (15.7%), the commercial financiers (15.3%), the low-cost funders (13.9%), the undifferentiated group (12.0%), and the money center institutions (11.1%).

Good and Steady

But there has been no change at all in the ranking of the top-quartile banks in each grouping. The top 25% of fee-based banks made a median adjusted return of 20.5% last year, compared to 20.6% in 1986. The best of the consumer intermediators made a median of 19.9% in 1987 and 19.6% in 1986. The top commercial financiers earned 19.4% last year and 19.6% the year earlier.

In 1987 the top low-cost funders made 19.1%, as compared to 17.8% in 1986. The best of the undifferentiated institutions recorded returns of 16.2% (1987) and 16.6% (1986). And the best of the worst — the top quartile of the money center banks — made 13.8% last year, as opposed to 14.0% in 1986.

Hence, the top 25% of banks in each peer group show remarkable consistency. Based on the returns of these elite institutions going back to 1984, the most profitable banking formula is clearly a fee-based strategy. Those that can best implement this strategy make higher returns than those that pursue any other business formula.

(Although high performance depends on business mix, it is also quite obviously a function of factors independent of mix and therefore more controllable. The most important controllable reason for the difference between the top-quartile banks and the median performers in any given peer group, calculates First Manhattan Consulting, is superior expense control.)

The consumer intermediators — the grouping with the highest 1987 median adjusted ROE — comprise 33 bank holding companies. The five largest banks in this peer group are Banc One, National City of Ohio, Barnett Banks, KeyCorp of New York, and Norstar Bancorp. The five most profitable institutions are Citizens Bancorp of Maryland, Banc One, First Illinois, First Virginia Banks, and Horizon Bancorp of New Jersey.

Consumer intermediators, as the name suggests, lend relatively more to the consumer than does the average over-billion-dollar bank. They also borrow more at retail than is the norm.

The income consequences of this balance sheet skew are as follows: In 1987 the ratio of gross pretax interest income to average assets was 50 basis points higher for the consumer intermediators than for the typical top-249 bank. In other words, since yields on consumer loans are higher than those on many other loans, the consumer banks raked in a larger-than-average gross.

Oddly enough, they also paid a tad more than the average to acquire their investable funds. The ratio of their interest expense to assets was 5 basis points higher than that of the overall sample of 249 institutions. It seems that consumer deposits, once appreciably cheaper than other funds sources, are no longer quite the bargain they used to be — unless, of course, the bank has access to an above-average store of transaction or demand-deposit money.

Fees and Float

Among the peer groups that apparently have access to abundant transaction money are the fee-based institutions. The fee-based peer group contains 39 bank holding companies. The five largest are Security Pacific, Mellon Bank, PNC Financial, Sovran Financial, and Bank of New York. The five most profitable are Fifth Third of Ohio, CB&T Bancshares of Georgia, Fleet Financial, City National of California, and United States Trust.

Fee-based banks have few discernible asset or liability skews. But they have very distinctive income characteristics. For example, the 1987 ratio of their fee income to assets was an astounding 100 basis points higher than at the average bank.

In the net-interest-income area, their performance was equally untypical. Gross pretax yield on assets was 35 basis points below average. But this yield disadvantage was almost entirely offset by a 30-basis-point funding advantage, traceable in part to that transaction money — the generous supply of demand deposits and float connected with many types of fee-earning services.

The fee-based banks are by and large below-average credit administrators, or at least were so in 1987. The ratio of their net chargeoffs to assets was 15 basis points higher than at the average top-249 bank.

The commercial-finance peer group, tied with the fee banks for second spot in the 1987 ROE derby, encompasses 44 institutions. The five largest are Wells Fargo, Dominion Bankshares of Virginia, Signet Banking of Virginia, Crestar Financial, also in Virginia, and Barclays USA, a Delaware corporation. The five most profitable are UST Corp. of Maine, First National Bancorp of Georgia, MBI Bancshares of Missouri, Fulton Financial of Pennsylvania, and Citizens First Bancorp of New Jersey.

The commercial financiers are characterized by an above-average concentration of middle-market C&I loans and real estate credits. These banks were more successful than any other 1987 peer group in generating outsize gross interest yields. Their ratio of interest income to assets was a vertiginous 105 basis points greater than at the typical top-249 bank.

So developed, in fact, was their skill in yield generation that these banks were prepared to pay substantially more for investable money than the average bank. Interest expense as a percent of assets was 45 basis points above the norm.

Given their focus on acquiring high-yield assets, the commercial financiers were perhaps understandably negligent in the fee area. Their ratio of fee income to assets was 30 basis points below the average of the top 249 banks.

Flouting the Textbooks

More surprisingly, despite their emphasis on high-yielding loan assets, the commercial financiers are excellent credit administrators. The group sported a ratio of net chargeoffs to assets that was 20 basis points below the top-249 norm. That is, these banks got the higher yields without, however, assuming the concomitantly higher risks — at least that is the message conveyed by their 1987 and also their 1986 results.

The low-cost funding peer group, fourth place in median 1987 ROE, includes 57 institutions. Among the largest of these banks are First Wachovia, First Union, and Citizens and Southern of Georgia. Among the most profitable are three New Jersey banks — Valley National, United Counties Bancorp, and Ultra Bancorp.

Like the fee-based banks but for somewhat different reasons, the low-cost funders have access to an above-average store of cheap demand as well as other inexpensive deposits. In consequence, their 1987 interest expense as a percent of assets was 55 basis points below the top-249 norm.

Safer than Average

Possessed of this funding bonanza, these banks are apparently content to invest disproportionately in securities and relatively safe C&I loans, with the result that their gross interest yield was 45 basis points less than that realized by the typical bank.

Because of their securities orientation and the type of loan customer to whom they gravitate, the low-cost funders have an excellent record in credit administration. Their ratio of net chargeoffs to assets was 15 basis points below the 1987 average of the top banks. And being basically quite conservative and also mindful of the expense dollar, these banks do not generate an appreciable amount of fees (fee income as a percent of assets in 1987 was 20 basis points below average).

The undifferentiated peer group — those banks unremarkable in either a balance-sheet or an income sense from the average top-249 institution — consists of 58 institutions. Among the largest are NBD Bancorp of Michigan, NCNB of North Carolina, and First Bank System of Minneapolis. Among the most profitable are Dauphin Deposit of Pennsylvania, Central Bancorp of Ohio, and SouthTrust of Alabama.

Trailing the Average

The run-of-the-mill undifferentiated institution, which makes, as has been noted, only 11.3% on equity, trails the average top-249 bank in all three income categories. In 1987 it earned 20 basis points less in gross yield and 30 basis points less in fee income, while paying 20 basis points more in interest expense. Its credit performance was also subpar, net chargeoffs amounting to 15 basis points above the norm.

The last-ranking peer group embraces those institutions trapped in the money center formula — above-average concentrations of foreign loans and wholesale money and below-average hoards of retail assets and demand deposits. This grouping consists of 18 banks, including, of course, the nation's best known. The most profitable are Bank of Boston, which has lately taken to styling itself a "super-regional," Irving Bank, Bankers Trust, J.P. Morgan, and Citicorp.

Relative to the average of the top 249 institutions, the median money center bank earned a gross interest yield of 30 basis points less, paid 60 basis points more in interest expense, and had net chargeoffs that were 25 basis points higher.

Its only advantage was in the area of fee income. Even here, however, the advantage was surprisingly modest. Despite their much-ballyhooed emphasis on fee businesses, in 1987 the ratio of fee income to assets at the money center banks was only 15 basis points greater than at the typical over-billion-dollar institution. ■

The World's Top 500 Banks By Assets

American Banker ranks the world's 500 largest banks in assets as of yearend 1987. This listing includes an asset comparison with 1986, as well as the number of bank branches, the number of employees, and the year the bank was established. Additional tables list the top 500 banks geographically and alphabetically. Also, the world's 100 largest banking firms— which include both banks and bank holding companies are ranked by assets. For the first time, this listing includes the equity capital of the top 100 firms and their respective equity- capital-to-assets ratios for 1987.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised asset total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised asset total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)—** A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated for affiliates more than 50% owned. **(v)—** Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)—** Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.—** Not available. **(†)—** Rank based on revised asset total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)**— A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)**— A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)**— Consolidated data. **(t)**— Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)**— Data are not consolidated for affiliates more than 50% owned. **(v)**— Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)**— Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.**— Not available. **(†)**— Rank based on revised asset total for 1986.

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for Austrailian and New Zealand banks are for June 30, 1987, Sept. 30, 1987, and March 31, 1988; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Exchange rates:** Whenever possible, the New York cable rate is used, and this rate is for same date as bank's figures. See "Foreign Currency Exchange Guide and Exchange Rate Comparisons" for key to currency abbreviations. **(h)—** A subsidiary of Compagnie Financiere de Credit Industriel et Commercial. **(q)—** A subsidiary Compagnie Financiere de Paribas, Paris, a financial holding company. **(s)—** Consolidated data. **(t)—** Figures are included in the consolidated figures of parent bank. For that reason, the data for the bank are not included in the aggregate data totals for the Top 500 Banks. **(u)—** Data are not consolidated for affiliates more than 50% owned. **(v)—** Bank is owned by another bank, which does not consolidate subsidiary banks in its data. **(w)—** Member of the Al UBAF Banking Group, Neuilly, France, under whose name the seven UBAF banks operate in the international financial markets. **N.A.—** Not available. **(†)—** Rank based on revised asset total for 1986.

Earnings Up 26.7% At California First

West Coast Bureau

SAN FRANCISCO — California First Bank said earnings for the second quarter rose 26.7% to $12.1 million, or 88 cents a share. The bank cited an increase in net interest income combined with a lower provision for loan losses.

Seishichi Itoh, president and chief executive officer of California First, said in a prepared release that growth in lending led to the increase in net interest income. Decreases in net chargeoffs and nonperforming loans, he said, allowed the bank to reduce its loan-loss provision.

The San Francisco-based bank, which is the process of purchasing Union Bank, Los Angeles, had net interest income on a fully taxable equivalent basis of $73.3 million in the second quarter, up 4.77% from the same quarter last year.

California First reduced its provision for loan and lease losses to $15 million, down 16.2% from the second quarter last year. Net chargeoffs dropped 50.5% to $7.5 million.

For the first six months of this year, the bank earned $22.8 million, up 26.2% from the first six months of last year. Earnings per share for the first half were $1.67, up from $1.37 in the first half of 1987.

California First is the sixth largest bank in the state and had total assets on June 30 of $6.32 billion. The company has said it expects to complete its purchase of Union Bank in the next few months, at which time it will use the name Union Bank. ■

Financial Commissioner Appointed in Kentucky

FRANKFORT, Ky. — Edward Hatchett Jr., 36, has been named commissioner of the state Department of Financial Institutions.

Mr. Hatchett succeeds Thomas B. Miller, who resigned earlier this year. Mr. Hatchett had been a trust officer of New Farmers National Bank of Glasgow, Ky., a federally chartered bank owned by state Gov. Wallace Wilkinson. Mr. Hatchett resigned that job to take the state position.

The Department of Financial Institutions regulates and examines state-chartered banks. Gov. Wilkinson said Mr. Hatchett will play no role in regulating the Glasgow bank and another one the governor owns in Bowling Green, because both are federally chartered. ■

Computer Developer Ends Move on Software Firm

GARDEN CITY, N.Y. — Computer Associates International Inc. has given up on its effort to acquire Management Science America Inc., an Atlanta-based software firm.

Nevertheless, Anthony W. Wang, president of Computer Associates, said his company still believes the acquisition would benefit both sides and is willing to discuss the possibilities with MSA.

Computer Associates, a developer of systems and applications software, made a proposal to MSA's directors on June 9 to acquire all MSA shares for $11.50 cash net. The MSA board rejected the offer. MSA is a vendor of mainframe applications software for financial accounting and personnel management. ■

Data Source: The primary source of data is **American Banker's** questionnaire to the 1,100 largest banks in the world. Data were checked against annual reports whenever possible. Consolidated data, if available, are used for all banks that own over 50% of other banks. The consolidation includes only those affiliates in which ownership exceeds 50%. **Date of figures:** Data for most banks are for Dec. 31, 1987 and Dec. 31, 1986. **Exceptions:** Data for the Australian banks in this listing are for Sept. 30, 1987; Canadian bank data are for fiscal yearend Oct. 31, 1987; and all Japanese bank data are for fiscal yearend March 31, 1988, and are compared with data for Sept. 30, 1986. **Total assets** exclude contra accounts and contingent liabilities. **Equity Capital:** This is total shareholders' equity capital which includes the value of common and perpetual preferred stock, surplus, undivided profits, and capital reserves. **Equity Capital/Assets:** The ratio of total shareholders' equity capital to total assets (less contra accounts). **Rank Among Top World Banks:** For the holding companies in this listing, the ranks shown are for their respective lead banks. For non-U.S. banks that own U.S. banks, the ranks shown are for their top U.S. bank subsidiary that was ranked among the top banks in the world. **(1)**— Obtained from other published sources. **(2)**— Includes subordinated debt and net income. **†**— Revised since publication on July 19, 1988. **(‡)**— Bank overstated its assets and equity capital by including nonbank subsidiaries less than 50% owned. It was not possible to correct these errors before publication. Based on American Banker definitions, its consolidated assets were $35.33 billion and its equity capital was $1.67 billion. **(c)**— Ratio based on corrected equity capital and asset figures.

Auditing and Accounting Focus of Fall Conference

NEW YORK — Frost & Sullivan Inc., a New York firm that prepares international market research reports, is sponsoring its first institute on bank accounting and auditing on Sept. 26-27.

The conference will focus on sound internal auditing and control practices and their applications to the competitive banking environment.

Topics include accounting for income taxes under FASB Statement 96, accounting for securitization and Third World debt, and summary annual reports. Invited faculty members include bank executives, senior members of accounting and legal firms, and members of the academic community.

The conference will be held at the Garden City Hotel, Garden City, N.Y. For more information, write or call Cheryl Wright at Frost & Sullivan Inc., 106 Fulton St., New York, N.Y. 10038; phone 212-233-1080. ■

AMERICAN BANKER CAN BE READ DAILY VIA ONLINE SERVICES

Get early morning access to today's American Banker news stories, commentaries and tables through several electronic services. Most services update the database by 12:01 a.m. on the day of publication. Included in the electronic version are complete speeches presented by industry luminaries, banking regulations, and other documents not published in the paper.

Two electronic versions of American Banker are available:

AMERICAN BANKER NEWS — Easy-to-use, containing the major stories and columns appearing in today's paper; available through DIALOG Information Services (800-334-2564) as file BANKNEWS.

AMERICAN BANKER FULL TEXT — The complete content of every day's paper back to 1981; updated daily. Available through Data-Star (215-687-6777); DIALOG Information Services (800-334-2564); Finsbury Data Services (212-493-7128); NewsNet (800-345-1301); and NEXIS (800-227-4908).

Selected stories may be indexed and summarized in FINIS, a database produced by the Bank Marketing Association (800-433-9013).

Japanese Banks, with Biggest Assets, Rank Below Top 25 in Equity Capital

➸ Continued from Page 1

different story, however. Dai-Ichi Kangyo, with a meager equity-to-assets ratio of 2.19%, falls to 76th place worldwide.

One Estimate: $35 Billion

According to IBCA Banking Analysis Ltd., a London-based research firm, as of March 1988 Japanese banks needed to raise $35 billion to bring their equity capital to 4% of risk-adjusted assets. They have already taken significant steps toward that goal. In the year ended March 1988, major Japanese banks raised roughly $12 billion in new equity and announced plans to raise an additional $6 billion.

Although many Western bankers regard the guidelines as a welcome constraint on the Japanese banks, some say they will not find it too difficult to meet them.

"The equity position of Japanese banks is ridiculously understated," said Andreas Prindle, managing director at Nomura International Finance Ltd., the London-based banking subsidiary of Nomura Securities International Inc.

When the property and securities holdings of Japanese banks are included, Mr. Prindle said, their capital position looks much the same as that of Western banks. Under the new guidelines, 45% of those holdings can be counted as supplementary capital.

It is unlikely, however, that Japanese banks will liquidate much of those holdings to increase pure equity capital. The Japanese banks use these holdings to support the banks' own businesses and to cement relationships with customers. Also, wholesale liquidations of such holdings would depress the Tokyo stock market.

Thus, Mr. Prindle said, Japanese banks will have to turn to the market for much of their new capital. Still, he said, they will have an advantage over Western banks. Not only is the Tokyo market much more receptive to new bank issues than Western markets, but Japanese banks trade at much higher price-earnings multiples than European and U.S. banks, he said.

Swiss Strongest in Equity

Among Western banks, the Swiss emerge as the strongest in terms of equity, the *American Banker* survey showed. All three major Swiss banks placed within the top 10 in terms of equity to assets.

Also high in rankings were British and Italian banks. All four of Britain's major clearing banks placed in the top 25. Four of Italy's top seven banks ranked in the top 25. However, two of the Italian banks — Cassa di Risparmio delle Provincie Lombarde and Monte dei Paschi di Siena — are special cases because they are controlled by local governments and have no shareholders.

Among U.S. banks, only Citibank ranked in the top 25 in terms of assets. In terms of equity, four U.S. banking firms — J.P. Morgan & Co., Bankers Trust New York Corp., Wells Fargo & Co., and Security Pacific Corp. — placed in the top 25.

U.S. banks generally showed little asset growth during the year, and some — Bank of America, Morgan Guaranty Trust Company of New York, Manufacturers Hanover Trust Co., and Security Pacific — posted declines in assets. The largest decline was at Bank of America, where assets fell from $89 billion in 1986 to $79 billion at year end.

Because of the decline, Bank of America dropped from 29th largest in the world in 1986 to 49th largest at the end of last year.

Exchange rates had a major impact on the relative growth of assets for banks in different countries. The yen-dollar relationship had the greatest impact, with the yen appreciating 22% against the dollar between Sept. 30, 1986, and March 31, 1988. ■

Mellon . . .

➸ Continued from Page 3

composed primarily of equity and retained earnings.

Mellon said that $175 million of its $525 million of new equity will include a series of noncumulative preferred stock purchased principally by the Warburg Pincus group. Regulators recently permitted banks to count noncumulative preferred as core capital.

Warburg Pincus held no bank stock before the deal, said Thomas Daley, a spokesman. Lionel Pincus, head of the firm, has known Frank V. Cahouet, chairman and chief executive of Mellon Bank Corp., "for some 30 years and has great confidence in management's abilities," Mr. Daley added.

The Wall Street investment firm now holds between 15% and 20% of Mellon, exceeding Paul Mellon's 8.8% share at yearend, a bank spokesman said. He said Warburg Pincus' stake will be diluted as new equity is issued.

The equity package also includes the issuance of $100 million in cumulative convertible preferred stock placed by Drexel. Convertible preferred does not count as core capital.

The remaining $250 million of equity will be made in the form of a bridge loan that Drexel is raising from an unnamed group of institutional investors who have entered into firm equity purchase contracts with the bank. If Mellon can't raise the $350 million, it will exercise puts requiring the investors to purchase 12 million shares of Mellon stock at $22 a share. The institutional investors, in turn, have received five-year warrants, not exercisable for the first year, to purchase 3 million Mellon shares at $25 per share.

At noon on Monday, Mellon stock was trading at $31.25 a share, down $1.25 from the opening, on heavy volume.

Mellon said it anticipates no change in its quarterly common stock cash dividend as a result of these actions. The bank company also will distribute as a special dividend to its common shareholders the $30 million of common stock in its new "bad" bank. The shares will be traded in the over-the-counter market. ■

Rau Seeks Consistency at Exchange Bancorp

➸ Continued from Backpage

Indeed, Mr. Rau had a shot to become president of Exchange at age 29, when Mr. Kaufman and his group gained control. "They were looking for someone to run the place. Ira Kaufman said we really like you, but if the first thing we do is make a 29-year-old president, we'll look silly. I said I can't change my age."

"That's entirely correct," concurred Mr. Kaufman. Because of Mr. Rau's youth as well as strife with former management at the bank, "we didn't feel it was worth taking a chance," he said. "People would say he's just a young kid."

Instead, the investor group brought in as president Homer J. Holland, a former senior vice president at First National Bank of Chicago, who was looking for short-term employment before heading on to something more "entrepreneurial," Mr. Rau said.

Mr. Rau was placed in the "designated-hitter spot."

"Really, from that point on, I kind of knew," he said. "The attraction was [that] sometime within a reasonably defined period, this [job] would be mine."

Mr. Holland resigned to form his own management consulting firm, and in 1983, Mr. Rau became president of the bank and deputy chairman of the holding company in a team working relationship with Norman Bobbins. Mr. Bobbins, who was named president of the holding company and vice chairman and chief lending officer of the bank was the senior member of the team, at 40 years old.

A youthful management staff was "built from scratch" at Exchange. Mr. Rau estimates that only one or two of the top 30 managers now at the bank date back to the old regime. With an average age of 46, many managers were recruited from Chicago's largest banks.

"We tended to want to recruit from the bigger institutions. We felt we should 'overgun' management. We wanted to recruit people that would fit in if we grew to be $2 billion to $3 billion [in assets]," Mr. Rau said.

Mr. Rau terms his management staff "refugees from bureaucracies" who prefer doing deals to paperwork. "All of us are still involved in substantial business development . . . I mostly recruited people who like to do that.

"It's taken six or seven years, but now we're doing more doing than building," Mr. Rau said. "We're starting to see the numbers." ■

Financial Industry Rejects Banking Bill

Major Provisions Of the Legislation

By BARBARA A. REHM
Washington Bureau

The House Banking Committee, after more than 16 hours of debate, voted 31 to 20 early Thursday morning in favor of legislation that would expand bank involvement in the securities business but further restrict insurance and real estate activities. The bill also increases consumer protection requirements.

The major provisions follow.

Title I: Securities Provisions

Bank holding company subsidiaries may underwrite and deal in commercial paper, municipal revenue bonds, asset-backed securities, mutual funds, and corporate bonds. Convertible bonds may be underwritten as long as they carry a conversion premium of at least 15%.

Banks with less than $500 million in assets may underwrite municipal revenue bonds directly in the bank. All banks may sell mutual funds and conduct discount brokerage in the bank.

Mergers between the 15 largest commercial and investment banks are banned. International banks or securities firms with more than $30 billion in assets are also barred from acquiring these large U.S. institutions.

Before a bank holding company securities subsidiary may exercise any new powers, the holding company's bank must hold 8% capital, thereby meeting risk-based capital requirements. Half of that capital must consist of shareholder equity.

Title II: Firewall Provisions

Banks may not lend to, buy assets from, or issue guarantees to affiliated securities subsidiaries.

Major Provisions: Page 15 ➞

Consumer Clauses Deemed Onerous

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Major segments of the financial services industry withdrew support on Thursday for the House Banking Committee's broad industry-reform legislation, after a hard-fought battle ended in an early-morning compromise by panel members.

The American Bankers Association, the Securities Industry Association, the Independent Insurance Agents of America, and the Investment Company Institute said on Thursday that they will not support the committee's bill.

The legislation, sponsored by committee Chairman Fernand J. St Germain, D-R.I., generally would ease restrictions on banks entering the securities underwriting business while barring them from underwriting insurance or entering real estate development markets for two years. The bill also would reinforce firewalls between a bank and its holding company's securities subsidiary while requiring banks that want to exercise new powers to meet new capital requirements and stringent consumer regulations.

TOM THEOBALD: THE FIRST YEAR

Continental Turns Aggressive

By LISABETH WEINER
Midwest Bureau

CHICAGO — In his one year at the helm of Continental Illinois Corp., Thomas C. Theobald has discarded the bank's consumer division and added expertise in trading, distribution, and merchant banking to narrow its focus to the business community.

Analysts say it is premature to measure the impact on the marketplace, but some corporate treasurers already have noticed key differences.

"The major change is in their approach to financing," says David T. Allen, chief financial officer of Dynascan Corp., Chicago. "In 1987, we had been a secured borrower; now we have an unsecured agreement."

Mr. Allen concedes there was some give-and-take in arranging the latest loan agreement. He had to scale down his credit requests and give in on some covenants. But when he told the bank what he wanted, they didn't shy away.

"I said, 'Here's what I want. If you can't deal with it, we understand. But I'm giving you the first shot at the deal. If you want our business, this is what I need.' And from there we negotiated."

Mr. Theobald arrived here last Aug. 1 and three months later announced a plan to turn Continental into one of the few commercial banks in the country focusing entirely on wholesale business. Its targets are national firms with annual sales of $200 million to $2 bil-

Broad Experience, Education Are Musts for Asset-Based Lenders

By **HAROLD F. STIERHOFF**

AS NARROWLY focused lenders, asset-based financial services organizations develop their lending officers for the most part from within their ranks or recruit them from competitors in the industry.

With asset-based lending now a big part of commercial banking, here's what one might look for in a competent asset-based lender.

There is no hard and fast rule for educational background, though the "school of hard knocks" probably accounts for the largest number of graduates in the business. It remains one of the premier requirements in the development of a fully qualified asset-based lender. No textbooks fully cover the variety of experiences encountered during a typical career in this field.

Asset-based lenders are expected to be able to understand and deal with such complex financial structures as leveraged buyouts, wade through the murky waters of the Bankruptcy Code, deal with litigation, determine what's going to work in the marketplace, understand the day-to-day changes in the value of collateral, and predict economic cycles.

They must also know how to unravel accounting complexities, account for tax law implications, be aware of industrial management techniques, have a sound foundation in commercial law, understand the banking system, judge the ability of managers, react to serious and complex issues on short notice — and manage his or her time with no idea of what tomorrow's schedule may be.

Seasoned asset-based lenders generally have encountered all of the above —on the same day. Obviously, this type of experience is not gained overnight. Even five years of lending might not provide the necessary depth of experience if the period covered a strong, prolonged economic cycle.

Although nothing supplants lessons learned in the "school of hard knocks," a sound general education and a business background speed up the learning process. A business degree emphasizing finance and accounting helps, as does experience in collecting accounts. Stints in the audit and workout departments of an asset-based lending operation provide broad exposure to the intricacies of the business. And let's not forget experience as a commercial lending officer.

Specialized training in secured lending is also available. The NCFA/-Wharton Institute of Asset-Based Lending, developed by the National Commercial Finance Association and Wharton School of the University of Pennsylvania, offers an intensive program. Participants must make a major commitment and effort to develop their business skills. At the Wharton campus, three sessions — totaling five weeks of classroom work — are given during the two-year program.

No formal educational requirements are needed for the institute's program. Applications are reviewed by an admissions committee, comprising both industry representatives and Wharton faculty, to make sure applicants have the background and ability to complete the program.

Many skills the asset-based lender needs that are derived from the legal, accounting, and banking professions can be gained from formal programs offered in these areas. The Uniform Commercial Code for example, is addressed in the curriculum of most business schools.

Yet, in order to gain an in-depth understanding of the pitfalls in Article 9 of the UCC — while recognizing the complexities and differences among states — practical on-the-job experience is required.

Although all asset-based lenders use in-house counsel and/or outside firms to assist in legal matters, the asset-based lender often makes decisions and takes action basis without the benefit of counsel. He or she does this for good reasons: to keep down costs and to react with dispatch.

To my knowledge there is no school or formal program dedicated to the continuing study of the Bankruptcy Code and implementation of bankruptcy proceedings. There are seminars, booklets, and various training sessions for lenders that deal with the various aspects of bankruptcy. However, a lender's training is not complete until he actually appears before a bankruptcy judge, serves on a creditor's committee and takes a superpriority lien in a Chapter 11 proceeding.

Collateral evaluation is a science and an art. The lender must do his best under existing circumstances, realizing full well that while an accurate assessment of collateral value may be valid today, that value can change quickly and dramatically.

A good asset-based lender is usually more qualified to judge the collateral value of accounts receivable than most corporate lending officers and is able to make sound judgments on inventory valuation. The asset lender also recognizes the value of bringing in outside experts for the evaluation of machinery, equipment, and real estate.

Sound collateral evaluation requires an understanding of how receivables pay out in various types of businesses and under such circumstances as economic cycles and changes in the weather. Over time the astute lender also develops relationships and shares experiences with reliable outside appraisers upon whom he or she can rely.

Qualifications required of an asset-based lender naturally will vary, depending on the size and structure of a financial institution. In some organizations the asset-based lender must also handle new-business development. This obviously requires skills beyond the lending process. ■

LETTERS TO THE EDITOR

Predictions of Social Security Surplus Are Off Base

To the Editor:

Erich Heinemann's July 18 commentary on tax and budget issues ["Truth in Taxes: Taking the Measure of Election-Year Rhetoric, page 6] quotes Morgan Guaranty economists as saying that in 2015 the annual Social Security surplus will be almost $500 billion. As a result, he argues, these annual surpluses could be used to pay off the federal debt and cause a quantum increase in saving, investment, production, and exports.

There is only one problem with this argument. In no meaningful economic sense will there be an annual surplus in 2015. If one looks at projected Social Security income and outgo in 2015, using the most commonly accepted set of economic assumptions (the Social Security Administration's Assumption II-B), one will find a surplus of approximately $500 billion. However, roughly $385 billion of the surplus is simply interest on the projected $7 trillion in government bonds held in the retirement trust funds.

Since government bonds are IOUs to collect taxes in the future, all that is happening here is that interest in the form of further IOUs is accumulating on the existing IOUs. To say that the government will pay off the national debt with this $385 billion is like saying that I can get out of debt by paying off my mortgage with a Visa card.

That leaves around $115 billion in surplus. But the Morgan economists have conveniently left out Medicare. Indeed, the combined Social Security and Medicare cash flow in the year 2015 under Assumption II-B is expected to add up to roughly a $50 billion deficit. So much for the surplus.

One might add that many consider Assumption II-B to be less realistic than the more pessimistic Assumption III. Moreover, it is quite likely that the Social Security actuaries have made overly optimistic demographic estimates. And as the Morgan economists worry, politicians are still under pressure to spend more money. The catastrophic health bill, for example, will no doubt eventually fail to pay for itself, despite claims to the contrary. All of these factors tend to make the numbers worse.

Payroll taxes have become a larger and larger source of revenue for the government, and this trend is projected to continue. However, there is no magic "surplus" out there as a panacea for our current budget problems.

Fortunately, as is pointed out in the article, simply capping spending growth at 4% for the next four years would balance the budget without a tax increase. Indeed, Congressional Budget Office figures show that a spending freeze would create a budget surplus in three years. A spending freeze is a real solution to our budget problems, not a solution relying on imaginary surpluses.

4 Big Mortgage Lenders Drop from Top 10

Lomas Falls to 13th Place; Reshufflings Reflect Rocky Condition of Industry

By PHIL ROOSEVELT

NEW YORK

LOMAS Mortgage USA and three other big-name mortgage companies have fallen from the ranks of the top 10 in originations, reflecting turbulence throughout the home loan industry.

Lomas, an inveterate leader among mortgage companies, dropped from No. 6 to No. 13 during 1987, an *American Banker* survey reveals.

Also falling from the top 10 were BancBoston Mortgage Cos., Jacksonville, Fla.; Commonwealth Mortgage Corp. of America, Houston; and Fireman's Fund Mortgage Corp., Farmington Hills, Mich.

The reshuffling of the upper echelon came against a backdrop of extreme volatility in interest rates and consumer demand. Total originations by all types of lenders fell 22% from the first half of 1987 to the second half as rising interest rates abruptly halted a homeowner refinancing frenzy.

Dallas-based Lomas, formerly Lomas & Nettleton Co., saw its 1987 originations plunge 25% from 1986's level, to $2.4 billion. As a result, the firm has slashed its staff by 36% since last June to 2,300 employees and cut its branch network by nearly 60% to 33 offices.

Lomas president Paul Low denied industry speculation that the firm is abandoning the retail originations market, where it made its name over the past century. Instead, he said, Lomas plans to rebuild its retail capability through means other than traditional branch offices.

"We think we've got some good ideas, but I can't tell you any more about it," Mr. Low said. "It's sort of a sensitive matter."

Citicorp Mortgage Inc., St. Louis, also suffered a 25% volume decline, but the firm nonetheless remained No. 1 in the rankings, with $6.5 billion in originations. As previously reported, Citicorp Mortgage is also first in mortgage servicing, boasting a servicing portfolio of $44.4 billion.

Robert Horner, chairman of the Citicorp unit, said the drop in originations largely reflected declining contributions from the company's correspondent lenders. He said they mainly originate fixed-rate loans, but consumers in 1987 showed an ever greater appetite for adjustable-rate mortgages, which carry lower initial rates.

The shift in demand to adjustable loans hurt many other companies, too. Mortgage companies, which sell their originations, complained that they were unable to match the pricing of thrifts, which aggressively originated adjustables for their own portfolios.

"We did not try to participate in the ARM market," said Robert Richards, president of Fireman's Fund Mortgage. "We have not figured a way to make ARMs in a profitable manner."

As a result, the unit of Fireman's Fund Insurance Co. saw its loan volume fall by more than 40%, to $1.7 billion. The company, which has cut its production staff by more than 50%, dropped from No. 8 in the rankings to No. 19.

One leading company with a big gain in 1987 was Countrywide Funding Corp., Pasadena, Calif., which rose to fourth place. Its originations shot up about 25%, to $3.5 billion, thanks in part to especially aggressive pursuit of refinancings in the first few months of the year.

"We're opportunists," said Countrywide president Angelo Mozilo. "The feasts in this business are rare and you have to seize them, because the famines can last for a long time."

Margaretten & Co., Perth Amboy, N.J., and Weyerhaeuser Mortgage Co., Los Angeles, both posted big enough gains to move into the top 10 in 1987. Margaretten rose from No. 13 to No. 8, Weyerhaeuser from No. 11 to No. 6. ■

Illinois Readies Mutual Holding Company Law

By ANDREA BENNETT
Midwest Bureau

CHICAGO

THRIFT regulators in Illinois are putting the final touches on regulations that would allow state savings and loans to convert to mutual holding companies, and two thrifts are said to be on the verge of making the change.

Such a move would mark the first time thrifts insured by the Federal Savings and Loan Insurance Corp. have tried to form mutually owned holding companies, industry officials said. People's Bank, a Bridgeport, Conn.-based savings bank that is insured by the Federal Deposit Insurance Corp., earlier became the first savings bank to form a mutual holding company.

The Illinois law could also test federal thrift regulators' stance on whether the holding company can sell a minority stake in its subsidiaries. Illinois regulations permit a mutual holding company to sell up to 49% of any of its subsidiaries, including the savings and loans.

"That has caused havoc out in Washington," John E. Seymour, Illinois savings and loan commissioner, said in late June.

Illinois allowed the formation of thrift holding companies in a law that squeaked through the state legislature last year. A law specifically allowing the formation of mutual holding companies and implementing regulations about their operation got legislative approval this year and now awaits the signature of Illinois Gov. James Thompson, Mr. Seymour said.

He said that two thrifts, which he declined to identify, have indicated they intend to form mutual holding companies, and that applications to do so could be filed in the next 30 to 60 days.

The $1.6 billion-asset United Savings of America, Chicago, said it would be interested in forming a mutual holding company.

Federal savings and loans got permission to form mutual holding companies in the the Competitive Equality Banking Act of 1987, although federal regulators have yet to issue guidelines for their formation. The Federal Home Loan Bank Board is expected to issue a proposed regulation for comment or advance notice of such a regulation in August, said Robert Bartlett, senior vice president and director of technical services at the U.S. League of Savings Institutions.

A spokesman for the Federal Home Loan Bank Board declined to comment about mutual holding companies or whether it was about to come out with regulations.

But thrift officials say the law passed in Illinois could be more liberal than what the Bank Board is likely to allow.

"The big issue is whether the Federal Home Loan Bank is going to allow holding companies to sell stock similar to what People's did," Mr. Bartlett said. "My sense is they are not."

Mr. Seymour said he had a "productive" meeting with M. Danny Wall, Bank Board chairman, in early July to discuss the new Illinois law.

According to Mr. Seymour, Mr. Wall said he believes savings and loans ought to be able to sell a minority stake in its subsidiaries but acknowledged there were a variety of opinions within the Bank Board on the subject.

Thrift officials say federal regulators' objection to mutual holding companies is that they undermine the regulators' campaign to get institutions to bring in additional capital by converting to stock institutions.

But Mr. Seymour argued that allowing thrifts to sell a minority stake in a subsidiary is one step in that direction. He said 70% of Illinois thrifts remain mutually owned, with management resisting conversion because of the expense it entails or fears that they will lose control of the institution.

It would be a "lost opportunity," he said, if regulators don't allow mutual thrift holding companies to sell stock in their subsidiaries, which he predicts will "sell like gangbusters."

Opponents of the form also say it allows directors to retain control of thrifts, but without accountability to outside ownership. Executives at People's Bank, however, disputed that argument, saying they still have a fiduciary responsibility to investors. ■

NY Bank Buys Data Processor

RIVERHEAD, N.Y. — Suffolk Bancorp said it has acquired a 100% interest in Island Computer Corporation of New York, a data processing service bureau in Bohemia, N.Y. The terms of the acquisition were not disclosed. Suffolk Bancorp is the holding company for Suffolk County National Bank, Riverhead, N.Y., which has more than $300 million in assets. ■

Gould Reiterates Advice on FSLIC

➜ **Continued from Page 6**

Mr. Gould will be joined at the Aug. 2 Senate Banking Committee hearings by representatives of healthy thrift institutions: Gerald Levy, chairman and chief executive officer of Guaranty Savings, Milwaukee, and also a former U.S. League chairman; and Herbert Sandler, chairman and chief executive officer of World Savings and Loan Association, Oakland, Calif.

The following day the committee will hear from three former Bank Board chairmen: Edwin Gray, Richard Pratt, and Jay Janis.

The Mortgage Bankers Association of America is up in arms about a bill introduced by Rep. John J. LaFalce, D-N.Y., that would require a lender to obtain the permission of a borrower to sell the servicing on a mortgage to another institution.

Mr. LaFalce may have had a problem with his own servicing recently, according to Warren Lasko, the association's executive vice president.

An aide to the congressman said his boss does have a new house in Buffalo. But he said he didn't know if the bill was the result of Mr. LaFalce's own experiences with his mortgage company.

"He has gotten lots of letters from constituents who have had servicing problems," the aide said.

The mortgage bankers' trade group was so upset that it assigned its lobbyists to chase Mr. LaFalce around the Democratic national convention in Atlanta earlier this month to try to sway his opinion.

Mr. Lasko said the bill would devastate the secondary mortgage market and raise mortgage rates about 35%.

If the bill is really that bad, fat chance it will get anywhere. Mr. Lasko agrees, but isn't going to gamble with so much purported to be at stake. ■

Imperial Savings To Acquire Thrift

LOS ANGELES — Imperial Savings Association agreed to purchase Ontario Savings and Loan Association, a five-office state-chartered thrift in rapidly growing San Bernardino County.

Terms were not disclosed. San Diego-based Imperial said it expects to complete the transaction later this year, pending approval of regulators and Ontario's shareholders. Ontario's offices would become branches of Imperial.

Ontario reported assets of $124 million, deposits of $99 million, and net worth of $18 million as of June 30.

Imperial is a unit of Imperial Corporation of America, San Diego, which has assets of $12.1 billion. The holding company reported a 77% increase in profits in the second quarter compared to the same period last year. Imperial Corp. attributed much of the gain to increased earning assets, a diversification program, and cost-cutting efforts.

Operating expenses fell to $40.3 million in the quarter from $52.8 million a year earlier.

The primary reason for the decline in operating expenses was the sale of ICA Mortgage Corp. last December to First Nationwide Financial Corp., San Francisco.

Many California thrifts, in order to control costs, have begun to consolidate their loan origination networks, which they had expanded rapidly in recent years. ■

Data Source: American Banker's survey of the top 200 mortgage companies in servicing and loan originations. **Mortgage loan originated in 1987:** permanent residential mortgages (1-to-4 family mortgages) originated for sale, or the intention to sell over the period Jan. 1, 1987 to Dec. 31, 1987. Included are loans closed by the mortgage company and loans where the mortgage company actually did most of the paperwork for closing. Both in-house production and purchased production— such as loans purchased from brokers and correspondents— are included. **Number of loans:** The number of mortgage loans originated in 1987. **Average Loan Size:** Mortgage loans originated in 1987 divided by the number of such loans. **Mortgage loan originated in 1986:** Residential originations over the period Jan. 1, 1986 to Dec. 31, 1986. **Percent change:** Originations in 1987 divided by originations in 1986 expressed as a percentage. **1987 Mortgages Serviced:** permanent commercial and residential real estate mortgages serviced for investors on Dec. 31, 1987. Excludes mortgages owned by the institution, as well as forward commitments, home improvement loans and all temporary financing, such as construction and development loans. **(1)**— Actual figure. Last year an estimated figure of $6 billion was used. **(a)**— Holding company for Lomas Mortgage USA. **(b)**— The 1987 origination figure is a combined figure for Dominion Mortgage Center and its parent, Dominion Federal Savings & Loan Assn. The 1986 origination figure was for Dominion Mortgage Funding Corp., a former subsidiary of Dominion Federal that was merged into the thrift. **(c)**— Residential mortgages for corporate customers of its parent, Fidelcor Inc. Philadelphia. On 2/29/88, Fidelcor was acquired by First Fidelity Bancorp., Newark. **(r)**— Company revised data. **(†)**— Rank company would have had if it were included in the servicing survey. **(‡)**— Rank company would have had, if the revised data had been used. **N.A.**— Not available.

COMMENT

While there is virtually no chance that the government will allow an agency that carries the name 'federal' — like the Federal Savings and Loan Insurance Corp. — to go under, keeping the FSLIC afloat will mean a major hit to the American taxpayer sooner or later, writes Dr. Paul S. Nadler. ______ 4

Worth Repeating

The bottom line is that for hundreds of credit unions and millions of their customers . . . share drafts will be treated as part of the local landscape.

Durant S. Abernethy 3d of the Credit Union National Association, on a ruling upholding the group's contention that a Federal Reserve regulation gives banks and thrifts an unfair advantage by treating credit union share drafts as nonlocal items when they are cleared through remote institutions. AN AMERICAN BANKER SPECIAL REPORT

Top 25 Banks Eliminated 10% Of Third World Loans in a Year

By BART FRAUST

NEW YORK — The nation's 25 largest bank holding companies have slashed their Third World loan portfolios by about one-tenth since establishing massive reserves for these credits in June 1987, according to a survey by the *American Banker.*

But about $5 of every $100 in assets at these companies is Third World debt. And the amounts are expected to tick upward in the coming months as a new $5.2 billion loan package for Brazil nears completion and as Argentina, Venezuela, and other countries seek new loans.

The 10 biggest banking companies, those holding the bulk of Third World loans, have cut their debt by an average of 7.8% since June 30, 1987. The banks ranked 11 through 25, mostly

Home Loan Banks Spurn FSLIC Notes

By JIM McTAGUE
Washington Bureau

WASHINGTON — Eleven of the nation's 12 Federal Home Loan banks are resisting pressure to make cash advances on uncollateralized notes issued by the insolvent Federal Savings and Loan Insurance Corp., industry and regulatory sources say.

M. Danny Wall, chairman of the Federal Home Loan Bank Board, pitched the notes at a meeting last week in Baltimore, some attendees reported.

Mr. Wall said Friday that the reports are wrong. "I haven't made a pitch and there isn't any resistance," he said.

The FSLIC is guaranteeing full repayment of the notes. They have been used by the cash-strapped agency to assist investors buying insolvent thrifts, especially in Texas.

So far, only the Federal Home Loan Bank of Dallas has accepted the guarantees. As a result, it has yet to receive an opinion from its auditor for 1987.

In 1986, auditors of the Dallas bank gave it a qualified opinion because they were concerned about the credit quality of the notes. The FSLIC was forced to redeem the notes with cash.

The auditor — Deloitte, Haskins &

Credit Unions Win Court Fight On Check Holds

New Fed Regulations Found Discriminatory

By YVETTE D. KANTROW

NEW YORK — A federal court has ruled that Federal Reserve Board regulations on check processing discriminate against credit unions. The decision effectively requires banks to treat local credit union share drafts as local checks, even if the draft is drawn on an out-of-town bank.

The ruling is a victory for the Credit Union National Association, which sued the Fed in May over a portion of Regulation CC, the new rules that limit the holds banks place on checks. In a decision filed late Thursday, the U.S. District Court for the District of Columbia upheld the association's contention that the Fed gives banks and thrifts an unfair advantage by treating credit union share drafts as nonlocal items when they are cleared through remote institutions.

The court also held that the regulation violates the "clear and unambiguous" language of the law that mandates it.

The credit union group lauded the court's decision. "The bottom line is that for hundreds of credit unions and millions of their customers . . . share drafts will be treated as part of the local landscape," said Durant S. Abernethy 3d, senior vice president and general counsel for the Credit Union National Association.

The Fed adopted Regulation CC in May to implement the Expedited Funds Availability Act, which Congress passed in 1987. The act requires

Top 25 Bank Companies Sharply Reduce Exposure to Third World

➼ Continued from Page 1

superregionals, have pared their Third World loans by 24%, about triple the rate of the top 10.

No bank among the top 25 increased its Third World debt during the period.

"This confirms the across-the-board decision by U.S. banks to exit from their exposures," said Paul Sachs, president of Multinational Strategies Inc., a New York-based consulting firm.

Besides declining in terms of total dollars, Third World debt declined in relation to total assets, common equity, and loan-loss reserves, the survey found. But Third World debt continues to be greater than either common stockholders' equity or total loan-loss reserves.

James J. McDermott, executive vice president of Keefe, Bruyette & Woods Inc., said the decisions last year to establish special reserves were intended to give banks flexibility in dealing with Third World debt. "The reductions in exposure show the process is well under way," he said.

The cutbacks come at a time of increased optimism about Third World debt in general, mainly sparked by an improved outlook for Brazil. The world's largest bank debtor has ended its debt moratorium and resumed interest payments. The country recently signed a preliminary agreement with its major lenders to reschedule $61 billion in existing debt and to obtain $5.2 billion in new loans.

"This has been a good year, with no major adverse events," Mr. Sachs said.

Political Problems Lurk

The debt crisis, which began in 1982, may heat up again next year. Argentine President Raul Alfonsin, in anticipation of upcoming presidential elections and Peronist pressure to declare a debt moratorium, has taken a more belligerent position in seeking renegotiation of its loans. Mexico's new administration may take a less conciliatory stand on its bank debt. And Venezuela, Latin America's most reliable debtor nation, has been battered by weak oil prices and is seeking renegotiation of its loan terms.

The nation's 25 largest banking companies now hold about $65 billion in loans to Third World countries, down 10.8% from June 30, 1987. The 10 largest banking companies hold 80% of this debt.

The data for the survey was obtained directly from the banking companies in most cases. For banks that declined to disclose their Third World exposures, data were obtained from the most recent quarterly financial statements filed with the Securities and Exchange Commission.

Third World debt specialists said the banks have reduced the debt through a variety of techniques, including exchanging the loans for equity positions in companies in the Third World, paying down the principal on the loans, and charging off credits.

In addition, banks are finding it easier to sell their debt into the secondary market. Mr. Sachs said market volume may go as high as $20 billion this year, about double the 1987 pace.

For example, Security Pacific Corp. sold $500 million of its Third World debt into the secondary market in the first half of 1988, according to its second-quarter earnings report. Continental Illinois Corp. said it reduced its Third World debt by $250 million through debt sales and swaps.

Citicorp, which led the move to create special reserves last year, has been the most aggressive of the top 25 in getting rid of Third World debt. According to its second-quarter earnings report, the corporation has sliced $2 billion off its Third World debt since last June. It now totals $12.6 billion, compared with $14.6 billion at year-end. Citicorp has said that 80% of the cutback came from full repayment of loans or from loan sales at relatively thin discounts of 10% to 30% of the credits' face values.

Bank of Boston Corp., with an $846 million reduction, had the second biggest dollar drop. "Our policy is to put the LDC debt problem behind us," said Alan L. McKinnon, executive vice president and treasurer of Bank of Boston.

J.P. Morgan & Co. reduced its Third World debt by $600 million. About $200 million of the cutback resulted from the Mexican bond program that Morgan championed. Under the plan, banks exchanged Mexican loans at a discount for Mexican bonds, the principal of which is collateralized by zero coupon U.S. Treasury bonds.

Wells Fargo & Co., with a 31.6% drop in exposure, had the biggest percentage decline among the top 10.

First Union Sheds All LDC Debt

Among the top 25 banks, First Union Corp. had the sharpest percentage decline, completely eliminating its $59 million of Third World debt. NCNB cut $239 million, resulting in a Third World loan portfolio of a mere $8 million. Other big drops were shown by the Fleet/Norstar Financial Group and SunTrust Banks Inc.

Despite the reductions, Third World debt continues to represent a sizable portion of bank assets.

On average, Third World debt comprised 4.9% of assets for the 25 largest bank companies, compared with 5.7% at June 30, 1987. The 10 largest banking companies cut their exposures to 6.3% of assets from 7% last year. Banks in the second tier reduced their position to 2.4% of assets from 3.2%.

Manufacturers Hanover Corp. and BankAmerica Corp. continue to have the greatest Third World exposure in relation to assets. At each corporation, about $10 of every $100 of assets consists of Third World debt. Citicorp cut its exposure to 6.1% from 7.5%, Morgan to 5.9% from 7.2%, Security Pacific to 1.9% from 3%, and Wells Fargo to 2.8% from 4.3%.

Analysts cautioned that the asset ratio could increase over the next few years if banks continue to shrink assets without making corresponding decreases in Third World debt.

Decline Relative to Equity

The banks have also cut their exposures relative to common equity. For the top 25, loans to lesser-developed countries were 1.1 times average common equity, compared with 1.4 times equity last year. For the 10 largest banks, Third World debt dropped to 1.5 times equity from twice equity last year. For the second tier, the multiple dropped to 50% of equity from 61%.

This multiple is expected to improve greatly over the next few years, as banks increase equity in anticipation of new international capital guidelines scheduled to take effect in 1992.

Manufacturers Hanover, at 3.4, and BankAmerica, at 2.5, again showed the weakest multiples. But both companies have been aggressively raising equity in recent months, and both showed substantial improvement from a year ago. At that time, Manufacturers' multiple was 4.5, and BankAmerica's was 3.1.

Third World debt at the 25 largest bank companies fell to twice total reserves from 2.3 times reserves last year. For the 10 largest, the multiple fell to 2.5 times reserves from 2.6 in June 1987. For banks ranked 11 through 25, it fell to 1.1 from 1.6.

Over the last year, however, banks have allocated a portion of their reserves specifically to cover potential losses on Third World debt, and these special reserves have been rising sharply at many banks. For example, Mr. McKinnon of Bank of Boston said three-quarters of his company's Third World loans are now covered by reserves. ■

[1] This survey sought out total loan exposure to Third World countries as reported by the bank holding companies to the Securities and Exchange Commission. In most cases, the numbers were provided by the bank holding companies. For others, SEC documents were used. Bank reporting practices differ greatly. Chase Manhattan, for example, in the past has disclosed exposure to Brazil, Mexico, Argentina, Venezuela, and Chile. Others report exposure to 31 countries that have sought to refinance their bank loans in the past few years. Still others do not break out Third World loans in their SEC reports.

[2] Declined to provide June 30, 1988, data before release of quarterly financial reports. Data for 1988 are as of March 31 and were obtained from first-quarter reports on file with SEC. 1987 data are from June 30 and public SEC filings.

1988 Chargeoffs for Third World Debt

First six months (dollar amounts in millions)

		Net Chargeoffs	% of Exposure

[1] Morgan's figures includes approximately $200 million in charge-downs related to its participation in the Mexican program in which it and other banks exchanged Mexican loans at a discount for bonds.

[2] First Interstate's figures include all foreign chargeoffs.

[3] First Union has no Third World exposure.

What Do All These Thrift Failures Mean, Anyway?

By DR. PAUL S. NADLER

"YOU talked about all the savings and loans in trouble. Does this mean we are going to have a giant series of bank failures like in the early 1930s?"

Hearing this question raised by an acute student after my Tuesday night class last month, I started to think and ask about what S&Ls' problems mean to various groups in our nation. I thought some of the answers that developed might be worth sharing.

First, there is the question of what the problems of thrifts in difficulty mean to top officials of thrifts that are not in trouble. The answer: precious little.

As a board member of a billion-dollar savings and loan put it to me:

"The only way it affects us is when the FSLIC raises our assessments. Otherwise, our depositors look only at the safety of FSLIC insurance, and they remain happy."

One could question, however, whether this confidence in the Federal Savings and Loan Insurance Corp. may be shaken in time.

Certainly most observers of the banking scene, including myself, feel that even though the FSLIC has far too few resources to cover the estimated $50 billion to $80 billion that might be needed to bail out the nation's ailing thrifts, Congress will allow the Treasury to borrow enough money to do the job. In fact, we have already had resolutions stating that the federal government will cover FSLIC's obligations.

Nadler Says:

The legacy of the thrift morass is a huge shortfall that may result in higher taxes, greater inflation, or both.

And if we know anything at all about finance, it is that the Federal Reserve has the power to create unlimited money if it is needed, and the Treasury must borrow by selling securities to the Fed.

While many observers feel this Treasury borrowing could proceed and depositors in ailing thrifts could be duly paid off, there are others who are not so sanguine.

Avoiding Tie-Ups in Weak S&Ls

Donoghue's Money Letter, for example, suggests in its July issue that people with money in weak savings and loans move it now into solid money market mutual funds. The newsletter holds that there is no assurance that the money will be made available to FSLIC just when it needs it, so a serious liquidity problem could arise when people with money in weak S&Ls find it impossible to get their funds out without a long delay.

The Donoghue newsletter reminded its readers that some people with money in weaker Maryland savings institutions that had state insurance instead of federal protection still have not received their money, more than three years after the first of the thrifts collapsed. It asks: "Why take a chance? Why not get your money out of weaker institutions now?"

(As for determining which are the weak ones, it will sell you an evaluation of those that interest you for a modest fee.)

But at least in my opinion, Bill Donoghue is too pessimistic this time around. There is virtually no chance that the government will allow an organization that carries the name "federal" to go under — or even delay payment and leave the public empty-handed for a short time. If FSLIC needs $50 billion, it will get it. If it needs $80 billion, it will get it. And immediately. The depositors will not be hurt.

But where will this money come from? Will it come from higher taxes? Raising $80 billion through taxes would require levying the equivalent of a $900 tax on every household in the nation. With an election campaign in which neither side has been willing to talk about tax increases to solve the present deficits, much less to raise $80 billion to bail out weak thrifts, it would seem impossible to create the new money without triggering major inflation.

Inflation helps avoid serious collapse in property values, and a serious collapse in property values helps avoid inflation. We don't get the worst in both.

But be this as it may, borrowing $50 billion to $80 billion just means that taxpayers pay the bill later rather than sooner. It still involves a major hit to the American taxpayer.

Where Did the Money Go?

What did we get for our potential tax of $900 per household? After all, the money has to have gone somewhere. It did not just disappear.

Some of it, unfortunately, is lining the pockets of entrepreneurs who used their savings and loans as private lending organizations for their own projects. Brokered deposits have provided ample resources to lend to themselves, and laws have been moderated to allow investment in a vast array of projects that have little to do with the traditional thrift role of financing America's homes. Little wonder these entrepreneurs looked at the thrifts they ran as geese that laid golden eggs.

Their motto was, "Heads I win, tails the FSLIC and the taxpayers lose." They have obtained a lot of the billions we are talking about.

Most of the rest went into financing projects that should never have been financed, judging by their inability to earn a decent return for the thrifts that lent to them. When Houston has more empty office space than Boston has total office space, one can question where the money for this surplus space came from. If you want an answer, you will be reminded every April 15, when you send your love letter to the Internal Revenue Service.

In essence, it is like the Real Estate Investment Trust era. When the REITs thrived, money was made so readily available to them that they made loans that should not have been made, just to use the money.

It is also like the petrodollar era. The oil exporters put so much money in U.S. banks that these banks made unsound Third World loans just to use the deposits they had on hand.

And now, the thrifts have gotten money so easily and painlessly that they have financed projects that America won't need for years, if ever. The only difference is that when the REITs got into trouble, it was their shareholders who paid. When the banks got into trouble, it was their shareholders who paid. But with today's thrift problem, it looks as if the entire American economy will have to pay — either through higher taxes or more inflation, or both.

It is hard to think that any new administration will be able to look at the consequences of thrift deregulation without pushing for new legislation. Unfortunately this new legislation may affect the freedom of all financial institutions — both those that were involved in these difficulties and those that were innocent bystanders. ■

Dr. Nadler is a professor of finance at Rutgers University's Graduate School of Management and is contributing editor of the *American Banker*.

Something to Say?

Please direct any comments you may have to the editor, William Zimmerman, American Banker, One State Street Plaza, New York 10004. Letters may be edited for reasons of space and clarity.

H. Erich Heinemann is on vacation. His column, Overview, will resume on Aug. 15.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 6.

1. By any standard measure of profitability, this $4.3 billion-asset company is by far the most profitable bank in England, if not in the industrialized world. In 1987, it posted a 39% return on shareholders equity and a 4% return on assets. At year-end 1987, it had a ratio of capital to risk-weighted assets of 13% and no exposure to Third World debt. The bank's biggest problem — most U.S. banks would love to have such problems — is finding suitable ways to use its accumulated capital, since it generates far more in deposits than it can possibly lend out. Identify this institution.

UNITED KINGDOM

2. In the *American Banker*'s 1987 ranking of top banks, ..., the world's 612th largest company, earned the dubious distinction of suffering the greatest decline in assets — 64.8%. Coincidentally, the reason given for this decline was the 64.8% fall in the value of the British pound relative to the dollar.

3. Indecorp, parent of the $106 million-asset Independence Bank of Chicago, signed a definitive agreement to acquire Drexel Holding Co., parent of the $113 million-asset Drexel National Bank. The merger will almost double Indecorp's assets to $230 million, creating the largest ..... bank in the nation.

4. A task force of the Electronic Funds Transfer Association found that one factor stunting the growth of point-of-sale payment systems is a lack of information about technical standards. On the consumer side, what other factor did the task force find working against promotions that use the term "debit card"?

5. In the first steps toward enacting comprehensive banking legislation, the House Banking Committee sat in marathon session until 2:30 a.m. Thursday — hammering out a series of amendments that generally expand the securities powers of commercial banks. A provision that took industry observers by surprise, however, was the amendment by Rep. Stephen L. Neal, D-N.C. How does this amendment affect the top 15 U.S. banks and the top 15 securities firms, along with any foreign financial firm with assets greater than $30 billion?

6. Empire of America Federal Savings Bank, Buffalo, will soon begin test-marketing a Visa affinity credit card in the Los Angeles area. Individuals targeted in the test program by Empire's California thrift division include theater patrons and residents of selected neighborhoods with high disposable incomes such as Beverly Hills, Brentwood, and West Hollywood. What national research foundation will receive $5 of every $25 membership fee and one-fourth cent of every dollar charged to this affinity account?

Credit Cards

VOL. CLIII NO. 150

Wednesday, August 3, 1988

Today

The merger pace in the Midwest slowed in the first quarter as only 19 bank combinations were recorded. But the average size of banking acquisitions in the region has grown. ___ 2

Government and banking officials are working to discourage a trend they call "free riding," in which banks refuse to participate in new Third World lending agreements while they benefit from such accords by collecting the interest payments from previous LDC loans. ___ 2

Chase Manhattan is preparing a master agreement to reduce the heavy paper flow believed to be slowing the secondary market for lesser-developed-country debt. ___ 2

Empire of America lost nearly $20 million in the second quarter after tripling its loan-loss provision. The nation's 13th largest thrift, based in Buffalo, said it will sell one branch and consolidate 13 into other offices. ___ 3

Credit Agricole, the French cooperative banking group, plans to increase its outstanding commercial paper in the United States from $1 billion to $3 billion. ___ 11

General Electric Capital Corp. said it has launched a program to originate consumer loans — on items such as pleasure boats and recreational vehicles — for banks and thrifts, which will have the option of servicing the credits. ___ 12

Executive Changes ___ 12
In the News ___ 3

COMMENT

Updating a resume can help a job-hunter identify new goals or directions and speed his return to a payroll, writes consultant Georgia Hickey. 4

TECHNOLOGY

American Savings Bank has installed an advanced branch automation system from Unisys Corp. in its telephone service area. If the system works well — and thrift officials are already raving about it — then American Savings will likely expand the Unisys contract to include its 35 offices in the New York area. ___ 6

Inference Corp. soon will introduce an IBM version of its software used to write expert systems, the programs that perform tasks that need expert judgment. The product line, called ART-IM, clearly was written with banks and other financial institutions in mind. ___ 6

IBM upgraded its 3090 computers, its most powerful series, announcing 10 models based on the new Enterprise Systems Architecture/370. ___ 9

Worth Repeating

We are in a big, black, bottomless pit that is getting bigger every day.

Herbert M. Sandler, chairman of World Savings and Loan Association, Oakland, Calif., who estimates the FSLIC may be short as much as $80 billion to handle troubled thrifts. [Page 1]

NEW ENGLAND

Building Boom Fuels Stock S&L Growth

By MICHAEL WEINSTEIN
New England Bureau

BOSTON — Loan growth at New England's newly converted thrift institutions has exploded in the past year and a half, spurred on in some cases by big increases in construction lending.

Rapid loan growth often raises red flags for analysts. They worry that overly fast growth may outpace a bank's ability to keep proper tabs on its loans, resulting in bad loans.

But thrifts that converted to stock form in the past year or two have been under pressure to leverage their newly acquired capital. And the New England economy has been strong, so loan portfolios have ballooned.

Parts of New England have been through a building boom. So a few thrifts have plunged into construction lending, which is riskier than traditional home mortgage lending.

Construction loans have already gotten two thrifts into trouble. But in general, asset quality at New England thrifts has remained good, especially compared with the problems at southwestern thrifts.

Also, capital ratios at New England thrifts remain way above average.

Loans at the nation's thrifts grew by about 10% during 1987 and have been expanding at an annual rate of 3% or 4% so far this year, estimated Joe Ziomek. He is managing director at MCS Associates, a thrift consulting firm in Newport Beach, Calif.

In New England, loan portfolios at thrifts that converted in 1986 have generally swelled by at least 30% since the end of that year. In some cases, loan growth has been substantially higher.

Analysts said the riskiness of such fast growth depends on a variety of factors, such as the strength of the local economy, where the loans are made, and the quality of lending officers.

"If somebody's growing 20% or 30%

Proxmire to Congress: Act Now on Thrift Woes

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Senate Banking Committee Chairman William Proxmire said Tuesday he hopes to prod Congress into enacting legislation this year to restrict deposit growth of insolvent thrifts and limit the use of exotic powers that some states have authorized for savings and loans.

After another round of hearings on the condition of the Federal Savings and Loan Insurance Corp., Mr. Proxmire warned angrily that Congress should not wait until next year to take some action to shore up the insolvent thrift-industry fund.

The Democratic senator from Wisconsin stopped short of calling for a taxpayer bailout of the insurance fund, as several witnesses before his committee urged on Tuesday. But he said Congress should act on more limited measures before its scheduled adjournment in October.

While acknowledging that time has almost run out in the 100th Congress, Mr. Proxmire said that the committee staff has begun drafting legislation and that he is hopeful the panel can agree on a package.

A resolution already introduced by Mr. Proxmire would not have the force of law. But it would put Congress on record as opposing deposit growth of insolvent thrifts and would urge the Federal Home Loan Bank Board to take steps to implement the resolution.

Sen. Jake Garn, R-Utah, endorsed the idea of limiting the ability of states to authorize broad powers for federally insured institutions even though, he said, it would violate states' rights — a principle he usually defends.

"Federal deregulation has not been a problem," said Mr. Garn, who sponsored legislation in 1982 that expanded thrift powers. "What California and Texas and some of the other states have done is a problem."

Several staff members said they believe it is possible Mr. Proxmire can move legislation this year. Limiting deposit growth of insolvent institutions may prove easier than re-

Take Stock of Accomplishments While Polishing Your Resume

By GEORGIA HICKEY

Third of Four Articles

DRAFT a resume but do not mail it. A resume should be both a process and the end result of that process; it is probably the least understood and most often mishandled step in any job search.

Ideally, I believe people should go through the resume process annually, or at least biannually. It should be the personal knowledge, career assessment, and planning equivalent of your financial net-worth statement.

It has been many years since most people facing a job search have taken an inventory of their marketable skills or a long, hard look at their balance sheet of accomplishments. For this reason, preparing a resume will be an exhausting project requiring extensive research and many rewrites.

The process will uncover many misplaced and forgotten details of past successes, mistakes and milestones. It should help to clarify strengths and weaknesses, areas of competence and preference.

It can provide insights that may lead to new goals or directions. As an adjunct, dates and facts will be filed and cross-indexed in the memory, providing more ready responses to the questions that will be posed in later interviews.

Ms. Hickey, a certified personnel consultant, is managing principal of the Quest Group, financial management search consultants based in Hartford, Conn.

An individual who does a thorough and careful job of assembling data for a resume is astonished to find how much has been accomplished. It is a confidence builder, a positive reinforcement of your professional knowledge and value, and can be of great comfort when your self-esteem is flagging.

Unfortunately, many job seekers miss these benefits because they relinquish the responsibility. They give the project only minimal time, thought, and research before turning it over to a resume service or their assigned outplacement agency. The result is usually a slick, sometimes glitzy, and always typeset production that can be spotted a mile away as a mass-marketing tool.

Seek Advice from Those Who Know

Avoid how-to guides written by college professors, advertising, or marketing people. Most have never hired anyone, nor have they read resumes for a living.

The best resume guides are written by executive recruiters or, as a second choice, corporate employment managers. Volumes and volumes are available with sample formats and suggested writing techniques, and you should read several before you form any hard-and-fast opinions about what is best for your own application. In the end, you will probably combine the advice of several. As an executive recruiter, I have formed my own opinions about resumes:

- Prepare for the Individual Recipient. Resumes sent anywhere except a contingency placement agency should be individually and specifically prepared for the recipient. They should be typed by a letter-quality printer on quality stationery with a straightforward, commonly used business typeface.

Fancy fonts, colored paper, gimmicks, or elaborate presentation folders red flag your resume as one coming off the assembly line. People receiving it suspect they may be one of hundreds on your purchased mailing list, and they will treat it accordingly.

- Omit an Objective Statement. If you are too specific, you risk excluding yourself from attractive positions that may not fit your stated objectives. If you are too general, it is a meaningless waste of a paragraph. If you've had a long, varied, or particularly successful career, you may substitute a summary instead — but it should be concise and compelling.

- Emphasize Work History. Education should not precede your work experience or become the focal point of your resume, no matter how reverently your alma mater may be regarded. Your Ivy League MBA should not look like the pinnacle of your career.

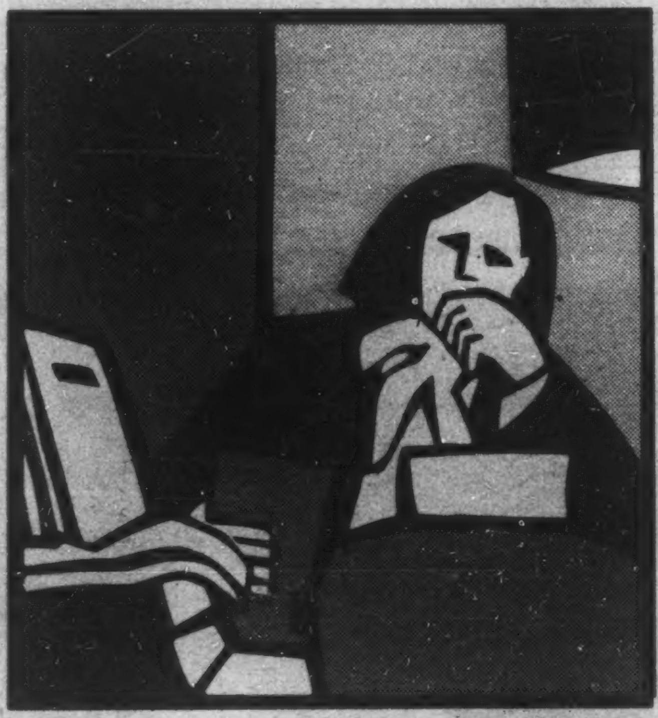
College Isn't Forever

If you're a midlevel or senior officer, the time for promising potential has passed. Now prospective employers will want to know what you've done lately. Even in the East, the traditional bastion of educational prejudice, demonstrated ability, bottom-line contributions, and hard-core accomplishments will make them want to talk with you more often than where you went to school. This is good news for the many top performers from lesser-known schools.

- Resumes should not be mass mailed. Resumes should be held in reserve and sent in response to a request for more information, or as precursor to an interview. A resume should be used once the door has been opened. It should be carefully drafted, carefully crafted, individually typed (or word processed), and directed.

- I'm from the Joe Friday school of resumes: "Just the facts, ma'am." Avoid glowing generalities, canned banalities, photos, third-party testimonials and contrivances.

Delete every trite adjective; give me the facts and let me decide just how "unique" or "exceptional" you are. Don't tell me the entire story of your life (save some mystery for the interview!), but give me enough to make a decision in your favor. I don't like one-page resumes and, as a rule, I won't read anything longer than two.



Nancy Doniger

- Quantify. Three important guidelines to remember when writing, rewriting, and re-rewriting a resume: quantify, quantify, quantify. Don't say you had responsibility for a loan portfolio. Tell me how big it was, what percentage was self-developed, the customer mix, how many new customers you added or relationships you expanded, what your lending authority was, how many officers you supervised or trained, and whether they contributed anything measurable.

You may wish to seek qualified, professional advice about the format of your resume, or to help you proofread and polish your phrasing. But never turn over the research and writing to someone else. If you do, you will lose the value of the self-knowledge and awareness gained during the drafting process, and you will risk looking (on paper) like everyone else.

- Expand Your Database. If you're like most people, you have concentrated so much on the pressing problems and projects of your job and former employer that you're out of touch with what everyone else is doing.

Make Publications Work for You

While being well-informed is always important, it is now vital for you to set aside time each day to read publications that tell you about trends, pending mergers and acquisitions, new technology, vendors, or other information relevant to your search. If you read both the *American Banker* and *The Wall Street Journal*, you will have access to volumes of valuable data.

A note of caution: Avoid using large blocks of your prime time to read. Those who fall into this trap often justify time spent as necessary for information gathering, but it is really an avoidance tactic for the contact work they find fearful or distasteful.

As you become better informed, you will begin to identify new and often broader prospects for employment or self-employment. Perhaps there is a bank with a progressive approach to retail banking that particularly interests you, or a consulting firm that specializes in sophisticated software development.

You may discover a vendor involved in marketing or developing a product where your background and skills could be particularly useful. Where is the growth going to be in the next 5 to 10 years, and how can you be a part of it?

All of this information should be factored into your decisions about your job search. Your new knowledge will allow you to target more effectively where and for whom you want to work, and how best to approach them. Being well-informed will also make you more interesting and knowledgeable in an interview.

- Target Your Market. There are many ways to target a market. For some, it will be by geographical selection (all of Connecticut or New England). Others will use a specialty (all commercial banks; all mortgage banking entities). Some use size (only thrifts of $2 billion and over).

Of course, most criteria are blended and overlapping. The point is, you must think about who will find your talents and abilities an asset, and where or how you want to use the productive years ahead.

Research Will Improve Your Odds

Do not panic and try to blanket the entire marketplace. On the other hand, do not constrict your search so tightly that you give yourself little chance of success. The rate of response is typically very low, but you can improve your odds by identifying and targeting your market; the key is research.

Make your first-round selections based on your reading, or use geography, a specialty, or a combination. Then use every tool available to do some research on your target banks or companies — their recent history, financials, market share, and organizational structure.

Get well acquainted with your library's business section. Use Polk's "Bank Directory," Standard & Poor's "Register of Corporations, Directors and Executives," and the many other directories available to you.

You will discover there is even a published guide to research that will help you plan a search for information and tell you where to look. Electronic data bases can provide vast reservoirs of up-to-the-minute information, but the cost mounts quickly. If you use them at all, try to confine their use to preinterview research.

After you have made your first-round selections and done your research (some of your selections may change after you've researched them), draft a succinct letter telling the company or bank why you are interested in working for them. Include a brief summary of your most important accomplishments, or better yet, the your skills or talents that may directly fit their needs.

Your finished product must be tightly constructed. It should be one page or, at most, a page and a half. It must be obvious to the person on the receiving end that your correspondence is more than a form letter or a preprinted resume, so it should contain enough individualization to show you've done your homework.

If your letter is both well-planned and well-presented, it will set you apart. It will demonstrate initiative and a genuine interest in the bank or company, often an irresistible combination.

The key ingredient is the person you address. You must be certain your letter reaches the person who is most like-

Chase Preparing Master Agreement

Continued from Page 2

its busiest days ever. The day's run-up in volume was primarily due to major trading desks attempting to profit on the unusually wide spread between prices of Brazilian and Mexican debt. As a result, agents were buying and selling heavily for their own accounts rather than for clients.

"I don't think agents could handle a whole week of that kind of volume," said Peter Geraghty, head of capital markets at Nederlandsche Middenstandsbank NV. "We've already seen the system get creaky in times of high volume." Likening the problem to the early days of the interest rate and currency swap markets, Mr. Geraghty said "we're hoping for standardized documentation" to help reduce the paperwork that must be repeated for each transaction.

Not all market participants believe the paperwork is overwhelming. "I'm not really sure why a standardized document is needed," said Kenneth Hoffman, a trader on the loan transactions desk at Shearson Lehman Hutton Inc. "Once I do a deal with someone, I have a standard agreement with them — in a sense the market has created its own standardized documenation." He said he believed standardization would help only with first-time business contacts.

But according to Chase's Ms. Galbraith, much of the red tape has resulted from the fact that "everyone is using their own [different] boilerplate." She added that, with a master document, only pricing and terms specific to the latest deal would have to be recorded on paper. ■

Bank Call Notice

Building Boom Fuels Growth at Converted Thrifts

Continued from Page 1

a year and has got the same capital contribution, I'm not too concerned about it," Mr. Ziomek said. Capital ratios at New England thrifts that converted in 1986 range from 7% to 22%.

"When you see a rapid rate of growth in one component of the portfolio, that's cause for concern," cautioned Bert Ely, a consultant in Alexandria, Va. "The red lights start flashing."

The two thrifts that have run into problems with their construction loans are both in the Boston vicinity.

First Service Bank for Savings in Leominster, Mass., said significant writeoffs are expected after regulators uncovered dubious real estate development loans from around New England in the thrift's portfolio. Construction loans at the $884 million-asset thrift jumped from 14% of total loans at yearend 1986 to 29% a year later.

First Service, which earned $5.9 million in 1987, said it may write off $10 million to $15 million worth of loans, which would cause a loss for the year.

At First American Bank, Boston, troubled loans to condominium developments in metropolitan Boston have pushed the bank's nonperforming loans to almost 5% of total loans. First American's construction loan portfolio grew from 15% of total loans at yearend 1986 to 26% at June 30, 1988.

The $723 million-asset First American reported a drop in second-quarter earnings in part because of the nonperforming loans. First American, which earned $15.7 million last year, said it may have to make a loan-loss provision as high as $15 million in the third quarter, causing a loss for the quarter.

Framingham Savings Bank in Framingham, Mass., has shown a big increase in its construction loan portfolio — from 15% of total loans at yearend 1986 to 26% of total loans at the end of June.

"We do recognize that the real estate market has leveled off, as we expected," said Walter H. Braillard, senior vice president and treasurer at Framingham Savings, with about $580 million in assets.

Framingham Savings has concentrated its lending within a 30-mile to 40-mile radius of Framingham, he added.

Industry consultants said a loan portfolio is usually safer if it is focused near the lender's home turf.

Excel Bancorp, a $650 million-asset thrift based in Quincy, Mass., has boosted its construction loan portfolio from 15% of loans at yearend 1986 to 27% at the end of June.

"We stay very, very close to home," said John A. Fanciullo, executive vice president. He said most of Excel's construction lending is on the South Shore, a suburban area that extends about 40 miles southeast of Boston.

Two commercial real estate loans account for about $3 million of Excel's $4 million or so in nonperforming loans, Mr. Fanciullo said. One credit is an

Proxmire to Congress: Act Now on Thrift Woes

Continued from Page 1

stricting the use of state powers, said one Republican staff aide.

"It's difficult but not impossible to do something this year," added Sen. Donald Riegle, D-Mich., a senior member of the committee.

During an unusually emotional hearing, thrift industry executives traded charges with committee members and and Treasury Department representatives over the origin and size of the financial problems confronting the FSLIC.

"We are in a big, black, bottomless pit that is getting bigger every day," said Herbert M. Sandler, chairman of World Savings and Loan Association, Oakland, Calif. Mr. Sandler estimated that the FSLIC is short as much as $80 billion of the funds it needs to handle troubled institutions. He said Congress should consider allocating up to $60 billion to the agency immediately or face needs of up to $110 billion in 1990.

Treasury Under Secretary George D. Gould said the only action Congress should take this year is to authorize a commission to study the FSLIC and make recommendations to the next President and Congress.

"Let's not build public policy on quick statements that we need $60 billion or $70 billion," he said. "We really don't know that." Mr. Gould said the Bank Board has calculated that the FSLIC will have $19 billion at its disposal over the next three years.

"They say, and I agree, that that is about as much as they can spend. They are on a path to resolving two cases a week, and that is quite a lot," he added.

Mr. Sandler and two other industry representatives told the Senate panel that much of the blame for the FSLIC's condition lies with regulators, who failed to manage problems, state legislatures that granted exotic new powers, and Congress, which deregulated deposit products without lifting ceilings on loan rates.

Mr. Garn, who was chairman of the banking committee during the years of deregulation, said those claims are outrageous. Without congressional action to deregulate interest rates at a time when money market mutual funds were draining deposits from banks and thrifts, he said, "the industry would have gone to hell in a handbasket."

Joining Mr. Sandler were Gerald M. Levy, chairman of Guaranty Savings and Loan Association, Milwaukee, and Donald B. Shackelford, chairman of State Savings Bank, Columbus, Ohio. Mr. Levy was chairman of the U.S. League of Savings Institutions when Congress was considering a rescue package for the FSLIC.

Mr. Garn and Mr. Gould both took note of the U.S. League's opposition to the $15 billion recapitalization proposed by the administration in 1986 and pursued throughout the following year.

"There is a big difference in your testimony today than when you were representing the U.S. League," Mr. Garn said to Mr. Levy, after quoting league testimony from 1986 in which the trade group argued that "media attention [to the FSLIC] was out of proportion to any realistic assessment of the problem."

"In 1986, we thought the problem was under control," Mr. Levy responded, adding that regulators had failed to detect or disclose the extent of the problems at some institutions.

"But how could we know, for example, that under the management consignment program, a thrift could be operated in Dallas with $1.2 billion in embedded losses that were never recognized." ■

Training Videos Help Staff Learn Check-Hold Law

Continued from Backpage

as a staff member, is also offering an Expedited Funds Availability Act training video. The 18-minute production focuses on the extent to which provisions of the act will affect a particular institution and its employees.

Narrated by institute chairman Joseph T. Wells and featuring Federal Reserve System official Gayle Thompson, the video comes with a recall exam and 50 handouts highlighting the program's main points. Deposit availability, endorsement standards, automated teller machine deposits, and hold notices are covered.

For those looking for an interactive computer-based training program for Reg CC, Bankers Training and Consulting Co., St. Louis, is selling the Compliance Instructor. Two hours of self-instruction, the Compliance Instructor covers the basics of check processing, details of new availability schedules, and advice on how to handle customer disclosures. The program runs on IBM personal computers and compatibles and, for larger banks, is available on mainframes.

With banks under pressure to make funds available for cashier's checks, teller's checks, and certified checks on the first business day after deposit, Rand McNally & Co., Skokie, Ill., is publishing a directory of telephone numbers that bankers can call for help in distinguishing authentic items from bogus ones.

The volume — an idea that arose from a proposal by the American Bankers Association's return-item task force — will contain telephone numbers, including direct extensions, of contacts at every domestic depository institution that issues official checks. Rand McNally plans to publish the directory in early September.

ChexSystems, a subsidiary of Deluxe Corp., St. Paul, wants to help banks protect themselves against risky customers before they open an account. More than 39,000 banks nationwide now subscribe to ChexSystems, a verification network that identifies consumers with a history of closed bank accounts due to repeated overdrafts.

When member institutions open an account for a new customer, they call ChexSystems to check the customer's bank account history. In less than a minute, ChexSystems can notify a bank if the applicant is one of 4.5 million consumers on file with a history of account closure for cause. The network will also alert the calling institution to customers who have attempted to open several accounts within a short period — a common setup for a check-kiting scheme.

According to ChexSystems, 7 out of 100 inquiries fielded by the company come up as a hit — a customer with a history on file. In urban areas, that number can reach 15 to 20 hits per 100 inquiries. ChexSystems also says that many professional con artists are aware that the network exists and will avoid institutions that display a ChexSystems sign on the new-account desk. ■

$800,000 local loan that was brought current July 1, and the other is a $2.2 million loan participation in California.

Traditional residential mortgage lending has generally produced high-quality portfolios, in which nonperforming loans amount to about 0.15% to 0.20% of total loans, according to industry consultants.

But as thrifts diversify into construction and business lending, nonperforming ratios are expected to increase, observed Fred Schluter, manager at Golembe Associates Inc., Boston. ■

Regulators Stall Comerica Purchase of Texas Firm

By ERIC STARKMAN

DETROIT — Michigan's banking commissioner ruled on Friday that Comerica Inc. cannot buy Grand Bancshares Inc. of Dallas until it improves its lending practices in Detroit.

Eugene W. Kuthy said Comerica has not done an "adequate job" of serving the credit needs of Detroit residents and businesses. Mr. Kuthy ordered the Detroit-based bank company to work with community groups and city officials to develop a two-year plan to make more mortgage, consumer, and commercial loans in the city.

He said the plan must contain defined targets that meet with his agency's approval. "While Comerica recently has announced its intentions to improve its community reinvestment record, I feel it is necessary to try to ensure that these efforts produce tangible results," Mr. Kuthy said.

"It is imperative that Comerica's plans be developed with community input and that my agency and the public monitor the bank's performance. Comerica's performance will weigh heavily in my decision to approve any future interstate acquisitions by the holding company." Mr. Kuthy said he conditionally approved Comerica's application to buy Grand Bancshares because he's not convinced that a lengthy delay in the approval process is necessary to force Comerica to improve its CRA performance. But, he added, "much remains for [Comerica] to do."

Comerica spokesman Randy Boileau said the bank company plans to be "fully responsive" to the conditions outlined in Mr. Kuthy's order. He said officials at the bank met with community leaders on Friday morning and hope to have a new community reinvestment plan drawn up as soon as possible.

"We're certainly moving ahead to get this thing done," Mr. Boileau said.

The Federal Reserve also must approve Comerica's application, he said. Community organizations in Detroit and across the country applauded Mr. Kuthy's decision. Debby Goldberg, an official with the Center for Community Change, a New York-based group that provides technical assistance to community groups in low-income and minority neighborhoods nationwide, said Mr. Kuthy's decision was "a great victory."

"I wish federal regulators would take this as a good example and follow [Michigan's] lead," she said.

50,000 Applications Filed

Ms. Goldberg said there have been more than 50,000 applications filed with federal banking agencies since the Community Reinvestment Act was passed more than 10 years ago. Only eight applications, however, have been denied on CRA grounds, she said.

The reinvestment act, enacted in 1977 as part of of the Housing and Community Development Act, requires that banks be rated periodically to determine whether they are doing all they can to meet their area's credit needs. Regulators are supposed to consider a bank's CRA rating when reviewing acquisitions or expansion applications.

Mr. Kuthy held a hearing last month in Detroit to review a protest from a local community group opposed to Comerica's March application to buy Grand Bancshares for $55 million.

In May, Mr. Kuthy's agency inadvertently made public that the Federal Reserve gave Comerica received a "less than satisfactory" CRA rating late last year.

A bank's CRA rating is confidential and made available only to regulatory agencies.

In his 18-page order, Mr. Kuthy said he is not convinced that Comerica "has been fully committed to the principles of CRA." He noted that Michigan's second largest bank company already operates a loan office in the Dallas area and cited a newspaper article reporting that Comerica planned to use its Michigan deposits to fund some of its Texas bank loans.

Comerica Chairman Donald Mandich said he would do this because the bank's cost of funds in Michigan is about two-thirds less than for Texas banks. "Before a bank embarks upon a program of out-of-area lending, it should ensure that the credit needs of its local community are met," Mr. Kuthy said.

Participation 'Less Than Aggressive'

Mr. Kuthy said that the participation of Comerica's lead bank, Comerica Bank Detroit, in its home city's commercial real estate projects "appears to be less than aggressive." He said he finds it disappointing that in the 10-year period ended in 1987, Comerica could list its involvement in only five commercial real estate projects.

He noted that the involvement was limited to the issuance of standby letters of credit backing tax-exempt bond issues. Mr. Kuthy said none of the letters of credit were ever exercised.

Also on Friday, a group of Detroit community, religious, and labor leaders agreed to form a coalition to force all Detroit-area banks to improve their lending practices in the city. The group, the Ad Hoc Community Coalition for Fair Banking Practices in Detroit, was organized by the Detroit branch of the National Association for the Advancement of Colored People in response to a series of newspaper articles documenting discriminatory lending practices by area banks.

Detroit banks denied that their lending practices are discriminatory. ■

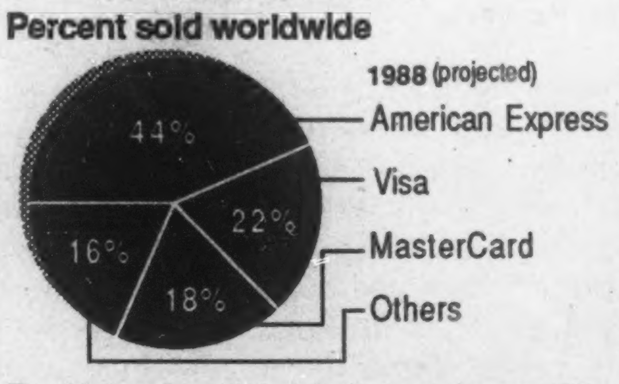
Market Shares Of Travelers Checks
Percent sold worldwide



The global travelers check market is expected to grow 10% this year, to $49 billion

Source: American Banker estimates based on issuers' disclosures

Travelers Checks Are Battleground For War of Words

By JEFFREY KUTLER

NEW YORK — American Express Co. has launched a campaign to refute assertions by Visa International that its member banks are cutting into American Express' dominant share of the travelers check business.

The claims and counterclaims portend a resurgence of the travelers check marketing war, which has gone through several phases since the early 1980s. Bankers have been sniping at American Express throughout, with moderate success.

Although the New York-based financial services conglomerate may have lost a few points off its market share, which was once above 50%, no one challenger has come close enough to give it a real scare. Visa wants to put itself in that position.

Visa said earlier this week that its global travelers check sales increased 22% during the first half of 1988, almost three times the 8% rate for the American Express product.

Visa also predicted that by next year it will be selling more travelers checks

Internal Memo Reveals How FDIC Chose NCNB

By BARBARA A. REHM
Washington Bureau

WASHINGTON — An internal Federal Deposit Insurance Corp. analysis of five takeover bids for First RepublicBank Corp. shows that Wells Fargo & Co. offered to pump $1 billion into the capital-starved banking firm — five times more than was pledged by the ultimate acquirer, NCNB Corp.

But the analysis concluded that the Wells offer probably would have ended up costing the agency significantly more than NCNB's proposal to recapitalize the insolvent Dallas-based bank holding company.

Under the Wells offer, the FDIC expected to pay $2.5 billion to $3.5 billion, while its cost under the NCNB plan was estimated at $1.4 billion to $2.6 billion.

The FDIC is required by law to select the least costly option when it props up an insured bank. The agency is often criticized for not explaining how it concludes which offer is the least costly.

The details of the bids were contained in an analysis prepared by Dillon, Read & Co., the FDIC's invest-

Riegle Asks FDIC 'Fix' on S&L Mess

By BARBARA A. REHM
Washington Bureau

WASHINGTON — Tired of the wildly divergent estimates on "the FSLIC problem," Sen. Donald Riegle said on Thursday that Federal Deposit Insurance Corp. liquidators should pinpoint how much it will cost to close or merge the hundreds of insolvent thrifts insured by the Federal Savings and Loan Insurance Corp.

Estimates of the cost of bailing out the FSLIC range from a low of $30 billion to as much as $100 billion. While there is general agreement that something has to be done to shore up the FSLIC, there is little agreement on how or when to do it.

Latest figures indicate that insolvent thrifts are losing close to $1 billion a month.

At a hearing of the Senate Banking Committee, which Mr. Riegle is expected to chair in the next session of Congress, the Michigan Democrat asked FDIC Chairman L. William Seidman how large he thought FSLIC losses might be.

"I don't know what the losses are in the S&L industry," Mr. Seidman said. "I don't know how anybody can, until you send people in to the 500 and some insolvent institutions and make an estimate."

Mr. Riegle agreed, saying the FDIC should deliver an "independent fix on the size of this problem."

"It seems to me that an arm's-length assessment done over a short period of time — so we know precisely where we are — is the thing to do," he said.

Riegle: Page 15 ➺

Crime Doesn't Pay – Except Where Certain Bankers Are Concerned

By IRVINE SPRAGUE

WASHINGTON

QUICK now. Name 20 bank chairmen or presidents who went to jail in the past 20 years. I'm talking about top managers who defrauded the stockholders and customers who had trusted them with their money — not tellers or bookkeepers or bank robbers.

The question is unfair. There aren't 20. At least I could not come up with that many after consulting my memories, augmented with library file searches by Len Samowitz of the Federal Deposit Insurance Corp. and Lou Leventhal of the *American Banker*.

Another question: How many convicted bankers served their full sentence? The answer, of course, is none. We all know that. Time off for good behavior and a change of heart by the sentencing judge almost always reduce the sentence.

Two flagrant examples. A prominent banker who stole millions was sentenced to five years in prison but stayed out on appeal for more than 10 years and finally served only eight months in a cushy outdoor job at a country club prison. A banker's son, given a 20-year sentence for securities fraud in 1982, already is out on the street.

The odds are that if you mismanage a megabank into the ground you won't go to jail and you won't pay for restitution. The stockholders take care of that for you. For it is the stockholders who pay for the directors' and officers' liability policies, which in turn pay for the mismanagement liabilities that often run into millions of dollars.

(Space is much too limited to go into the proliferation of savings and loan crooks who have had a wonderful time during these carefree deregulation years.)

Bad Management and Fraud

Comptroller Robert L. Clarke recently released a study showing that inept management has been the primary cause of bank failures, and that fraud often was a tool used by bad managers. FDIC Chairman L. William Seidman has testified that fraud was involved in at least one-third of all bank failures in 1986, 1987 and 1988.

With hundreds of bank failures in the past two decades and fraud a major cause, why the shortage of jail sentences? I guess the answer is threefold:

1. The Justice Department is asleep, or inept, or underfinanced. (The *American Banker* on July 28 reported an epidemic of bank fraud in the central district of California at the same time the major fraud division staffing there was cut more than 30%. Blame Ronald Reagan, Edwin Meese, James C. Miller.)

With hundreds of bank failures in the past two decades and fraud a major cause, why the shortage of jail sentences?

— Irvine Sprague
Former Chairman and Director
Federal Deposit Insurance Corp.

2. Bank fraud is one of the most difficult crimes to prove to the satisfaction of a jury.

3. White collar crime pays.

This treatise was prompted by the guilty pleas of William Patterson of Penn Square Bank and John Lytle of Continental Illinois National Bank and Trust Company of Chicago, representatives of the two most flamboyant bank failures in history. Mr. Patterson and Mr. Lytle are to be sentenced Aug. 30. (I count Continental Illinois as a bank failure because it was. The FDIC annual report for 1987 continues the myth that it was not a failure by omitting it from the list of the 10 largest failures in history.)

The Patterson and Lytle cases are classic examples of how not to provide quick retribution and prompt justice. The guilty pleas came six years to the day after Penn Square failed.

The surfacing of the story after six years brought back memories of that Fourth of July weekend as we spent three long days in Paul A. Volcker's cramped office deciding what to do about Penn Square.

Recent accounts attempt to rewrite the history of that weekend. I guess I should set the record straight. Comptroller Todd Conover was concerned, correctly, that if he closed Penn Square and we paid it off there would be multiple, unknown fallout, probably including fatal damage to Seattle-First National Bank, Continental Illinois, and

THRIFT OBSERVER

Banks, Thrifts Gain Ground in Mortgage Business

By STUART A. FELDSTEIN

THE roster of top players in U.S. mortgage origination is changing very quickly. And many of the changes favor banks and thrifts versus their mortgage banking competitors.

It's now clear that 1987 was the year that the depository institutions gained ground in the mortgage business. And 1988 will be the year that some of the bigger banks and thrifts try to solidify or expand their market share gains in first mortgage origination.

Stuart A. Feldstein

In "Giants of the Mortgage Industry: 1988," just published by SMR Research, we found that the top 25 U.S. mortgage loan originators in 1987 included 12 depository institutions, 10 mortgage bankers, and 4 companies that split their originations fairly evenly between bank and thrift or mortgage banking distribution methods.

Of the 12 big depository institution mortgage lenders, all but three showed significant gains in their 1987 originations over 1986. Of the 10 biggest mortgage banking originators in 1987, only three showed gains: Countrywide Credit, Weyerhaeuser Mortgage, and Primerica (parent of Margaretten & Co.).

In 1986, the top 25 originators were configured in exactly the opposite way. They included 12 mortgage bankers, 10 depository institutions, and, again, 4 of the multiform kinds of companies.

Three companies that do business mainly as mortgage bankers and that had made the top 25 list in 1986 fell off that list in 1987. They were First Union Corp. (which owns First Union Mortgage), Lomas & Nettleton, and Fireman's Fund. At the same time, Shawmut Corp., the Boston-based bank, and Home Federal Savings & Loan of California made the list for the first time.

Acquisitions Add to Mortgage Lending Growth

One reason for the new mortgage lending power of the banks and thrifts is that they continue to make acquisitions. Shawmut, for example, made the list because of its recent acquisition of Hartford National. Big California thrifts such as H.F. Ahmanson and Great Western continue to make acquisitions, too.

In addition, the banks and thrifts are taking advantage of their ability to sell adjustable rate mortgages, or ARMs, in a rising interest rate environment. Mortgage bankers have a harder time doing so.

Mortgage bankers sell all their loans, and secondary markets for ARMs are not as well developed as for fixed-rate mortgages. Also, since most ARMs currently have "teaser" period rate discounts, mortgage bankers find they have to hold these loans for uncomfortably long periods before they can be sold at a good price.

In 1988, many of the largest banks and thrifts have their sights set on continued penetration of the mortgage market.

We think that Ahmanson, the San Francisco-based parent of Home Savings of America, may rise to challenge Citicorp as the largest retail originator of mortgages. Not far behind will be two other thrifts: Great Western and First Nationwide, the Ford Motor Co. subsidiary.

If anything, commercial banks are showing even greater interest in growth. In New York, almost all of Citicorp's main rivals are working on their own versions of Mortgage Power, the system in which Citicorp obtains loan referrals from realty and mortgage brokers. Mortgage originations by some of these rivals, such as Chase Manhattan, already are rising quickly.

Money Centers Move Aggressively

On the West Coast, Security Pacific has formed a new mortgage company and has been aggressively pricing ARMs. Wells Fargo's 1987 originations were up an astonishing 64% from 1986. BankAmerica has revamped and revitalized its mortgage lending efforts and has introduced a commissioned mortgage sales force. And in the Midwest, First Chicago has made an acquisition that doubles its origination capability, even though it still will be only a medium-size player.

How long the money center banks will pursue growth strategies in mortgage lending is an open question. They also are under pressure to build capital, and that may require divestitures of nonbank subsidiaries. Commercial banks in this decade have sometimes shown a tendency to build up a mortgage operation, sell it, and build another.

Nevertheless, at least for the time being, the banks and thrifts are making major inroads among the top tier of mortgage players. If the bigger depository institutions continue to make acquisitions — which certainly seems likely — they may permanently take more of the top spots among the mortgage industry's origination leaders. ■

Mr. Feldstein is president of SMR Research, Budd Lake, N.J.

THRIFTS & MORTGAGES

AN AMERICAN BANKER WEEKLY FEATURE

This Week's Quote

When times are terrific, people step up to the plate to pay more money.

— Erwin I. Katz, president and chief executive of Williams Securities Group, on thrift mergers and acquisitions.

Newswatch

2 Mortgage Firms Cut Staff

Two more mortgage companies are cutting back their staffs and branches as consumer demand continues to sag.

Chase Home Mortgage Corp., Tampa, Fla., is planning to lay off up to 70 employees, or 7% of its staff, by Oct. 15, said president Fred Koons. He added that an additional 70 people will be shifted to other units of parent Chase Manhattan Corp.

Meanwhile, Shearson Lehman Hutton Mortgage Corp., Irvine, Calif., has closed five branches in the past two weeks and laid off 40 people, or 6% of the staff, said senior executive vice president Graham Williams.

Mr. Williams also acknowledged that the firm's executive vice president in charge of loan production, Michael Fernandez, had resigned. He said, however, that the resignation was unrelated to the branch closings.

Shearson and Chase are but the latest in a series of mortgage companies to retrench in the face of dwindling consumer demand. Market analysts say originations by all lenders this year will fall at least $100 billion from the near-record $450 billion posted in 1987.

Borrower demand has been hurt by rising interest rates — and the July 9 half-point hike in the discount rate is likely to make matters worse.

"It portends at least a one-quarter-point rise in mortgage rates over the next 30 days," said Thomas LaMalfa, mortgage market analyst at North American Mortgage Co., Houston. "Branch closings are to be expected through the balance of the year," Mr. LaMalfa added.

Shearson's Mr. Williams said the five branches his company closed recently were in California, South Carolina, and Oregon.

At Chase Home Mortgage, formerly based in Montvale, N.J., a total of 13 branches in Florida and the Midwest will be closed or merged with other Chase operations, Mr. Koons said.

He added, however, that the company is markedly boosting its wholesale origination of mortgages. And a spokesman for Chase Manhattan said the corporation's total originations this year should still exceed the $3.5 billion of last year.

Pacific First Targets Air Force

Pacific First Mortgage Company, Walnut Creek, Calif., has teamed up with RE/MAX International, the Denver-based realty concern, in a bid to win relocation business from members of the U.S. Air Force. The push apparently marks the first time a mortgage lender has targeted the armed services, and it underscores industrywide efforts to identify new sources of originations.

Developed with Air Force officials, the unusual program will extend reduced mortgage and realty fees to Air Force members on the move. Pacific First, a unit of Tacoma, Wash.-based Pacific First Federal Savings Bank, sees the plan as a focused way to enter the relocation market, said vice president Michael Rosser.

Wye Tries New Twist on ARM

Wye Mortgage Co., Lutherville, Md., has begun originating a new type of adjustable-rate mortgage that adjusts annually for the first five years, then at only five-year intervals.

The so-called 1/5 ARM is meant to offer borrowers the stability of an intermediate-term ARM with the low initial interest rate of a one-year instrument. A Wye official said the firm already has lined up one buyer in the secondary market and is looking for more.

— Phil Roosevelt

Thrift Mergers Increase in Number

But Average Price Has Fallen, Survey Finds

By LINDA ELLIS

NEW YORK

THE volume of thrift acquisition deals is growing, but the size of the deals is not, according to a study of thrift mergers and acquisitions between January 1983 and June 1988.

SNL Securities, Hoboken, N.J., a bank and thrift consulting and research firm, studied 52 acquisitions of publicly traded thrifts by looking at regulatory and company data. Among their findings:

- Only three of the 41 deals completed in the last three years have been in excess of $150 million in total value.
- Merrill Lynch & Co. leads the pack of investment advisers on the thrift deals.
- There are limited sources of new capital, with little evidence of increased entry of nonfinancial firms into the thrift industry.
- Consolidation is occurring primarily intrastate. Less than 25% of all acquisitions in the past three years have been interstate.
- The median time between the announcement of a pending merger and the closing of the deal has grown from 171 days in 1985 to 255 days in July 1988. The major delay is the regulatory process.
- The merger and acquisition focus has shifted from Florida to New England.
- Cash has become the most common form of deal currency.

One reason the average deal price has fallen, said the SNL researchers, is that many small institutions have converted over the past few years, shrinking the average size of publicly traded thrifts. In addition, there is a dearth of buyers large enough to digest institutions with more than $1 billion in assets. The largest deal done in 1986 had a market capitalization of $422 million; the largest in 1988 to date was $137 million.

Another finding, SNL researchers said, could be called "Waiting for Godot: Closing a Thrift Acquisition." While the 255-day median waiting period includes the time it takes the thrifts to prepare regulatory applications, most of the time is taken up with regulatory processing.

In the past, potential acquirers of troubled thrifts have complained about the length of time it takes for regulators to evaluate and act on their proposals.

"There are a number of tax and accounting aspects to these transactions that take time and make them particularly complicated," said John Adams, a First Boston Co. vice president in charge of thrift mergers and acquisitions. "Eight to nine months sounds about right, but other regulated businesses face the same thing."

The Federal Home Loan Bank of San Francisco said it is trying to speed up the mergers and acquisitions process under powers delegated by the Federal Home Loan Bank Board. Michael Patriarca, director of the agency group at the Home Loan bank, said one thrift, Stanford Savings and Loan Association, Palo Alto,

Cashing In on Home Buyers' Special Needs

By A. JOSEPH NEWMAN JR.

PHILADELPHIA

IF you are in real estate brokerage today, you are being squeezed by the rising cost of doing business and the erosion of commission income that stems from flat fees and the need to give a bigger share of commissions to salespeople.

So you may be looking for new and different ways to make money, such as offering your home buyer customers the more traditional title and property insurance and mortgage-banking services through third-party providers.

Quaker Financial Corp., headed by Harold H. Kline, a former Philadelphia banker, has come up with another way of adding revenues in residential real estate — packaging short-term and home equity loans.

Quaker Financial, Paoli, Pa., is an affiliate of Hoopes Inc., also of Paoli, a member of the Better Homes & Gardens network. It has 15 offices and more than 500 salespeople in upscale Philadelphia suburbs. Mr. Kline was president and chief operating officer of Liberty Savings Bank here before it was acquired last year by Equimark Corp., Pittsburgh.

Quaker Financial is marketing Homebuyers' Helper loans for Hoopes customers who might have trouble raising quick cash — for mortgage application and rate lock-up fees or for the down payment on the purchase price of a house within 10 days after an offer is accepted. Hoopes prospects may also need immediate cash to paint, paper, and otherwise spruce up houses before putting them on the market.

Homebuyers' Helper loans, according to Mr. Kline of Quaker Financial, are averaging around $45,000, with a range of $25,000 to $150,000.

Buyers may also need swing, or bridge, loans until their own home is sold. Quaker's financial service people can help on that too, and home equity credit can also be arranged via Quaker.

Quaker's financial service people are "in residence" at all Hoopes offices. Mr. Kline likes to have prospective home buyers visit with them "early on" so Quaker, working with real estate agents, can spell out how much cash they might need and how soon.

Since so many of them are two-worker families, would-be home

Quaker: Page 10 ➸

Thrift Mergers Rise in Number but Not Price

➸ Continued from Page 6

Calif., was sold to America First Financial Corp. in about two months.

The difficulties gripping the Federal Savings and Loan Insurance Corp. probably have some overall dampening effect on companies that are at the margin about acquiring a thrift, said Erwin I. Katz, president and chief executive of William Securities Group, Tampa, Fla., a regional investment banking firm that does a lot of thrift mergers and acquisitions work.

"Potential acquirers of thrifts, because of their concern over what the industry may have to do to help solve the FSLIC's problems, may in fact look a lot closer at what they are considering acquiring," Mr. Katz said. "They will look at asset quality, at management, and be tougher on the negotiating price. Sure, FSLIC has an effect, because when times are terrific, people step up to the plate to pay more money."

Cash, said SNL, is king in merger and acquisition deals. Except in 1987, when cash was a currency in 54% of the transactions, cash has been used in two-thirds or more of all transactions occurring annually since 1983.

While Florida and other southeastern states used to be the center of merger activity, lofty prices and tough competition in the overbanked regions have discouraged potential buyers, SNL found. The focus has shifted to New England and, to a lesser extent, the Pacific Northwest. The activity in New England is due to the excess capital levels of many thrifts in the region. The average capital ratio among all publicly traded thrifts is 8.05%; in New England, it is 9.85%, attributable to their generally healthy condition and the high levels of capital raised during conversions.

The trend toward intrastate mergers and acquisitions may change over time, SNL researchers said, as more states adopt less stringent interstate banking legislation.

Most of the acquisitions in the study were moves to consolidate operations, improve efficiency, and gain market share.

Declining deal prices are partly a function of the stock market crash last October, the researchers state, but they are also a reflection of the declining perception of the value of a thrift institution's franchise.

While the survey found that outside capital has not poured into the thrift industry since January 1983, Paul Haklisch, a managing director of Merrill Lynch Capital Markets, said he expects the mergers and acquisitions market for thrifts to broaden in the future.

"There will continue to be significant activity in the thrift sector," the head of Merrill's financial institutions M&A group said. "Industrial companies and commercial banks in particular would be expected to be active acquirers of thrifts.

"For certain commercial banks, thrifts provide a cost-effective means of expanding," Mr. Haklisch said. "A bank can capture the customer base and branch network of a thrift and incorporate its own product lines, ending up with an expanded franchise at a price below that which it would otherwise have to pay for a commercial bank branch network."

Chris Foskett of Goldman, Sachs & Co., said thrift mergers will grow "especially as outsiders come into the thrift industry and view it as undervalued."

"And as regulatory barriers fall," said Mr. Foskett, who handles mortgage banking and thrift-related mergers, "commercial banks and thrifts will consolidate on an increasing basis." ■

Quaker Financial Taps Home Buying Market

➸ Continued from Page 6

buyers are often as short of time as they are of liquidity, he said. At Hoopes' real estate offices, they can apply for credit — if they need it — right on the premises.

People "want the convenience of one-stop shopping for houses and for financial services," Mr. Kline said. "They don't need more hassle at what can be a stressful time anyhow."

The third-party provider of Quaker's packaged short-term and home equity loans is the $1.1 billion-asset Home Unity Savings Bank in Lafayette Hill, Pa., a Philadelphia suburb.

For Home Unity, the year-old deal with Quaker means additional assets and deposits — loans are accessed via Home Unity checks dispensed by Quaker Financial — without costly marketing and other acquisition expenses. The thrift may also wind up with new first mortgages, although Hoopes brokers continue to do business with other lenders.

Quaker Financial shares Home Unity's loan origination fees.

CLS Corp., Blue Bell, Pa., also has a piece of the action. CLS — for consumer loan service — provides banks and thrifts with a full-service back office to handle consumer lending from application to collection, and the accounting paperwork in between.

In this case, CLS earns fees from Home Unity for processing, evaluating, and tracking the loan applications collected at Hoopes offices by Quaker Financial. Home Unity has the final say on loans.

CLS is headed by Norman R. Bitterman, a former senior vice president of the PSFS unit of Meritor Financial Group. He and other principals own a third of CLS. Advanta Corp., Horsham, Pa., parent of Colonial National Bank, Wilmington, Del., owns a third, and private investors own a third. ■

Union Planters to Acquire Bank

MEMPHIS — Officials of Union Planters National Bank, Memphis, announced that a definitive agreement had been reached to acquire the Pickett County Bank and Trust, Byrdstown, Tenn. Founded in 1904, Pickett County has approximately $28 million in assets and shareholders' equity of $2.5 million. Union Planters will purchase 100% of Pickett County's privately held stock. ■

Irving Trust Named ADR Agent

NEW YORK — Irving Trust Co. said it has been appointed depositary bank for Paragon Resources' American depositary receipts, or ADRs, which are traded in the over-the-counter market.

Paragon Resources NL, based in Perth, Australia, develops and operates gold mines and conducts exploration ventures in Australia and abroad.

American depositary receipts represent shares of a foreign company's stock held by a depositary bank. ■

FDIC Tactics In Big Failure Face Scrutiny

By STEVE KLINKERMAN
Southwest Bureau

DALLAS — Debtholders of bankrupt First RepublicBank Corp. are gearing up for a court fight challenging the means by which the Federal Deposit Insurance Corp. seized First Republic's 40 Texas member banks.

The upcoming battle centers on the March 17 transaction in which the FDIC lent $1 billion to First RepublicBank Dallas to halt a run on deposits. As surety on the loan to the lead bank, each of First Republic's member banks issued guarantees equal to its primary capital.

When the FDIC called the $1 billion note on July 29, all of the First Republic member banks in Texas failed and were taken from the parent company and placed in a federally chartered bridge bank.

Debtholders contend that the transaction was fraudulent. They say many of First Republic's member banks were solvent, valuable institutions that should have remained as property of the holding company.

"The FDIC took for itself all the assets of First Republic's good banks to defray the costs of insuring deposits at First Republic's bad banks," said Martin Bienenstock, a partner in the New York-based law firm of Weil, Gotshal & Manges.

Mr. Bienenstock represents the unsecured creditors' committee of IFRB Corp., the First Republic unit managing the claims and liabilities of InterFirst Corp., one of the two banks that merged in early 1987 to form First RepublicBank Corp.

IFRB's unsecured creditors asked First Republic's bankruptcy judge on Tuesday for authority to begin litiga-

AN AMERICAN BANKER SURVEY

33% of Execs Less Confident In Banks Than 2 Years Ago

By PHILIP T. SUDO
First in a Series

Business executives say they are confident in the nation's banking system — but less so than in recent years, according to an *American Banker* survey of corporate financial decision makers.

Nearly 46% of those surveyed expressed a great deal of confidence in the nation's banking and financial system. Another 46% said they have some confidence. Only 7% said they had very little or no confidence in the system.

But when asked how their level of confidence had changed over the past two years, 33% of the respondents said they felt less confident in the system.

"Anyone who can hear thunder and see lightning has to be a little shaken," said John Lyons, analyst for Lyons, Zomback & Ostrowski, New York. "When you have headline after headline about the foibles of banks, confidence becomes a very important issue."

The first *American Banker* Corporate America Survey was based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms. The interviews were conducted in March and April with the executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more.

Of those whose confidence in the banking system had eroded, 68.1% attributed the change to the recent wave of bank failures. Twenty-two percent cited current economic conditions, 16% pointed to the Third World loan problem, and 5% mentioned the poor quality of bank management.

"It's not surprising in light of the events that have marked the decade," said James McDermott, analyst for Keefe, Bruyette & Woods Inc., New York. He noted that Keefe's index of

THE OBSERVER/COMMENTARY

Having it Both Ways: Pros and Cons of Mutual Holding Company

By ROBERT CHAUT

THE mutual holding company or MHC structure is a little known and less understood concept. It allows well-capitalized mutual thrifts to convert to stock form, sell shares to the public, but continue to maintain mutual control.

Properly construed, an MHC format can offer thrifts a vehicle for achieving their strategic goals while providing a reasonable return for investors. Legislation authorizing MHCs has been enacted in several states, principally in the Northeast.

Similar legislation is part of the Competitive Equality Banking Act, passed by Congress last year. It is applicable to federally chartered thrifts anywhere in the country and to state-chartered institutions domiciled in states having no MHC legislation.

Notwithstanding these moves by lawmakers to permit this new type of corporate structure, there has been no great rush by mutuals to take advantage of the legislation. In fact, the Federal Home Loan Bank Board has not yet drafted the various regulations that will have to be in place before conversion to this corporate form can occur via federal law.

The People's Conversion

A Connecticut-chartered savings institution has become the first MHC conversion, under state law. People's Bank, Bridgeport — the largest savings bank headquartered in New England, with total assets approaching $6 billion — completed its conversion in early July.

The MHC process permits a thrift to transfer virtually all of its assets and liabilities to a newly chartered stock savings bank, receiving in return shares of the "new" bank. The "old" bank then becomes a nonoperating mutual holding company, whose sole business is to own a majority interest in the shares of the new stock institution.

People's, for example, provided that its MHC receive approximately 78% of the outstanding shares of the subsidiary bank. The other 22% was sold — as in an ordinary conversion plan — first to depositors, then employees, the community and, finally, to the public.

Here, of course, is one major difference between the MHC type of conversion and the ordinary mutual-to-stock conversion that has occurred with great frequency in recent years. In a mutual-to-stock conversion, regulations require 100% of the shares to be sold for cash. In an MHC conversion under Connecticut law, the institution may limit the sale of shares to avoid creating an excessively high capital position.

Federal law is vague on this important point. Some attorneys suggest that no minority shares at all can be sold. Others believe that the Federal Home Loan Bank Board's regulations — still to be issued — will permit sale of minority shares. It is to be hoped that the latter will be the case.

Connecticut law grants priority subscription rights to depositors in the original offering of shares, as is the case in all conversions. It is, of course, possible that all the shares offered might be acquired by the depositors if a large number chose to subscribe. In the People's case, eligible depositors and Connecticut residents subscribed for about 71% of the shares offered.

> 'The mutual holding company process permits a thrift to transfer its assets and liabilities to a newly chartered stock savings bank. The 'old' bank then becomes a nonoperating mutual holding company, whose sole business is to own a majority interest in the shares of the new stock institution.'

Connecticut law provides both an absolute ceiling and a meaningful floor concerning the sale of shares. The ceiling is fixed: No more than 49% of the shares can be sold to investors, so that a majority must be held by the MHC.

The floor is voluntary. But the state law provides that if, at the time of conversion, at least 20% of the shares are sold for cash, no further subscription rights need be offered to depositors if additional shares are issued in the future.

Obviously, if newly issued shares always had to be offered to depositors before being used for such purposes as acquisitions or stock options, the technical complications of issuing additional stock would probably undermine important reasons for converting in the first place. Under such rules, it must be assumed that thrifts converting to MHC format will immediately sell at least 20% of their shares.

Management's ability to limit the sale of shares in the conversion process to between 20% and 49% is surely a positive factor for the well-capitalized thrift, which could not efficiently use all the capital a regular conversion plan would generate.

As already noted, the 1987 federal legislation is not clear on the question of selling minority shares. It does not address a 20%-to-49% sliding scale that would permit management to judge its need for new capital, or whether subscription rights would accrue to depositors after the first sale.

It is to be hoped that the Bank Board regulations will permit shares to be issued after the original conversion, with no major impediments attached. If not, the mutual holding company trend — at least via federal legislation — may stop before it gets started.

The stockholderless mutual holding company will have directors who are elected, under Connecticut law, by incorporators who are themselves directors. This will permit self-perpetuation of the directors of the MHC; they will hold a majority interest in the subsidiary savings institution, with public shareholders in the minority.

In Connecticut, the MHC cannot reduce its ownership of the subsidiary bank below 51%. While this legal requirement is rare, perhaps unique, in corporate law, the concentration of

LETTERS TO THE EDITOR

FDIC Says It Considered Managing 1st Republic

To the Editor:

In criticizing the Federal Deposit Insurance Corp.'s resolution of the First RepublicBank Corp. crisis [Aug. 16, page 1], Sanford Rose relies on an assumption that isn't supported by the facts. His assumption is set forth in the following passage:

"The evidence suggests that the FDIC ruled out the option of running First Republic on its own. In other words, the agency solicited bids from private parties after having decided that it either could not or would not operate the institution as a fully nationalized entity.

"By circumscribing the range of choices, the agency handicapped itself. It is conceivable that if private bidders knew that the FDIC was still weighing the option of running the institution by itself, they might have been disposed to raise their bids."

Mr. Rose does not describe the "evidence" he cites. So far as we can determine, he did not contact anyone at the FDIC to ask if the agency at the outset had, in fact, ruled out operating First Republic's banks.

As it happens, Mr. Rose's assumption is incorrect. In discussions with bidders, FDIC Chairman L. William Seidman made it clear that the agency was considering as a serious alternative installing management and operating First Republic for an indeterminate period. Indeed, the "stand-alone" option was among the proposals considered, first by the FDIC staff and finally by the FDIC Board of Directors, right up until July 29, the day the final decision was made and announced.

While Mr. Rose may think the FDIC acted with "unseemly haste" in resolving the First Republic situation, the Texas public and its banking industry probably wouldn't agree. First Republic was the largest banking operation in the state, and the months-long uncertainty about its future contributed to a general perception of instability in the state's banks and in its economy.

Mr. Rose is correct in stating that the FDIC prefers not to operate banks. As a bank regulator, we think that is a sound position, especially when it involves the largest bank in a market.

A final point of clarification relates to Mr. Rose's reference to "the $210 million or so bid by NCNB." That's somewhat misleading. NCNB did not bid $210 million for First Republic; it bid that amount for 20% of the entity, plus the right to purchase the FDIC's 80% share at a future price which is estimated to be in excess of $1 billion.

Alan J. Whitney
Director
Corporate Communications
Federal Deposit Insurance Corp.

Sanford Rose's reply:

Mr. Whitney asserts that as far as he can determine, I did not contact anyone at the FDIC to ask if the agency had ruled out operating First Republic's banks. But of course I did, and a well-informed source with an understandable craving for anonymity described the events in some detail.

He pointed out that the FDIC performed an analysis of the relative economics of government operation vs. sale. I am grateful to Mr. Whitney for calling attention to the imprecision of my statement about the $210 million. But that does not change the point — to wit, the FDIC's analysis revealed that the discounted value of the net revenues to be earned if the institution remained in government hands exceeded what could be realized by selling it to NCNB. On paper at least, it was more profitable to hold than to sell.

Despite this analysis, the FDIC had no intention of holding, and this must have been clear to the private bidders, whatever Mr. Seidman may have told them. FDIC personnel made no secret of their lack of enthusiasm for running failed banks. Many suggested that government ownership of Continental Illinois was a key factor delaying the recovery of that institution.

And others apparently felt quite sincerely that Texans would boycott a fully nationalized bank, making it impossible to realize the projected revenues. Is it conceivable that these attitudes were not known to the bidders?

Indeed, another bit of evidence suggests that the bidders should have divined the FDIC's intentions. Agency insiders were avowedly concerned that had the FDIC not accepted what was offered, the local marketplace would have said in effect: "This bank is so bad that no one in the private sector wants it."

This, in the opinion of some at the FDIC, would have led to further deposit outflows and further damage to the business potential of the institution. Is it possible that canny private negotiators could not detect the smell of fear? A key representative of one of the negotiating groups insists that he, for one, could catch the scent.

AN AMERICAN BANKER SURVEY

Executives Still Have Faith in Banking, but It's Shaky

▸ Continued from Page 1

money center and regional bank stocks — a measure of investor expectations — declined 20% from March 1986 to March 1988. Similarly, the *American Banker* index of money center stocks declined 36% during the period. In contrast, the Standard & Poor's 500 Composite index rose 8.6% in the period.

Only the NASDAQ index of small bank stocks improved over the two years, by 11%.

A Measure of Faith

Beyond its effect on stock prices, confidence is important because it measures the corporate world's faith in banking relationships, Mr. Lyons said. Borrowers, for example, invest as much time as lenders do in trying to build a solid, enduring relationship, and they do not like to see that effort undermined by problems in the system.

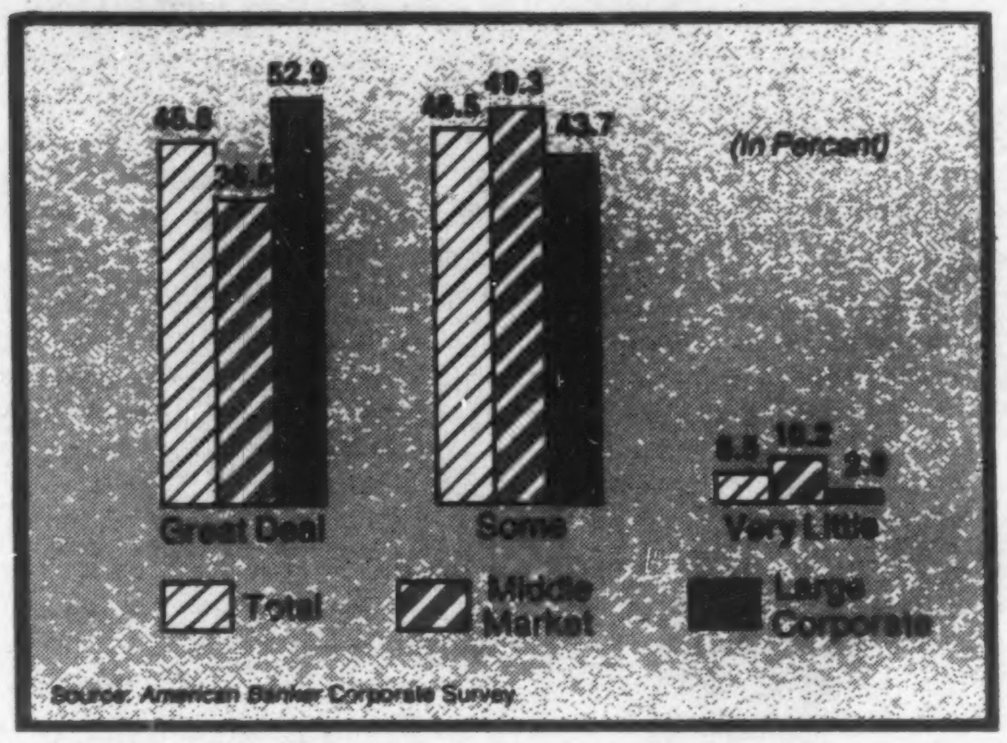
And from a depositor's standpoint, "confidence is everything, because corporate deposits are the uninsured deposits," Mr. Lyons said. Most large and middle-market companies have balances that exceed $100,000, which puts them outside the Federal Deposit Insurance Corp.'s protection. "In that sense, the corporate depositor becomes like an investor in the bank."

Fifty-four percent of the respondents said they were as confident in the banking system as two years ago. An additional 12% were more confident in system.

Significantly, though, the level of confidence varied by the size of the company. Large corporations expressed more confidence in the banking system than did middle-market companies.

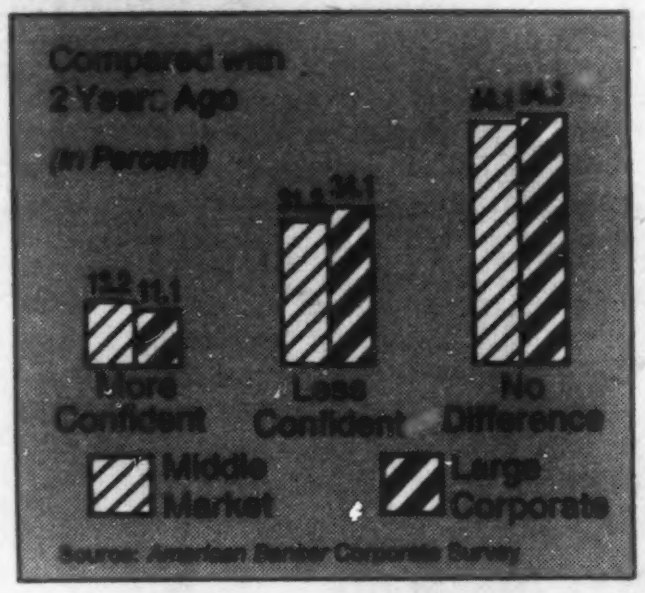
Nearly 53% of the large firms said they had a great deal of confidence in the banking system, with only 2.9% indicating very little confidence. Among middle-market respondents, 38.5% reported a great deal of confidence and 10.2% said they felt very little confidence.

Confidence Remains in the Banking System...



Source: American Banker Corporate Survey

...But Confidence Is Falling



Source: American Banker Corporate Survey

"The middle market is of greater concern to me than the large corporation," Mr. Lyons said. "The large corporations don't borrow from banks anymore, so they don't care as much. But the middle-market borrower has a life and death relationship with banks — they're hand in glove with the bank, and they're saying, 'I'm scared.' "

As one Atlanta-based executive put it, "I still have confidence in the system — but not as much confidence in the banks."

The slip in confidence has led many respondents to change the way they conduct their banking business.

'One Key Bank'

"We've consolidated our banking with one key bank," said the chief financial officer for a Michigan-based health service who expressed only some confidence in the system. Conversely, the controller of a Texas-based chemical company who felt very little confidence in the industry said, "We're separating our accounts and putting them in different banks to handle."

Another executive in Texas, whose banks have suffered through a spate of bad energy loans, said, "We don't keep accounts in excess of $100,000 because [the banks] are going down right and left. They're not doing their homework, and it's going to hurt our business."

Some indicated they are willing to look for financial services at institutions outside of banking.

"Because of the high failure rate in the banking system, we've put less and less reliance on banks and more on other financial institutions," said a California firm president who felt less confident in the industry.

Despite these problems, the banking system is still better equipped to handle problems today than it was 15 years ago, Mr. McDermott said.

"I remember when Herstatt created a crisis of confidence," he said, referring to the German firm Bankhaus I.D. Herstatt KGaA, whose failure in 1974 sent shock waves through the world financial system. "It used to be that a single event like that would set off all kinds of alarms.

"Here in the last year, we've gone through the stock market crash and a whole series of crises, and they've been managed through," he said. "So if you look at it, it suggests a fungibility of the banking system. For the industry to have gone through as many crises as it has and still be in good shape is a sign of inherent strength."

Next: Consolidation in the banking industry has created benefits and problems for corporate America.

How the Survey Was Conducted

The first *American Banker* Corporate America Survey is based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms.

Trans Data Corp., a research affiliate of the *American Banker*, developed the survey questionnaire in collaboration with the newspaper's editors and reporters. Trans Data, Salisbury, Md., conducted the interviews, tabulated the responses, and assisted in the preliminary analysis for the survey.

The interviews were conducted in March and April with executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more. Within those two groups, companies were randomly selected from a universe of 80,531 middle-market companies and 3,010 large corporations.

The sample has a margin of error of plus or minus five percentage points with a 90% confidence level. That means if 60% of the companies give a response, there is a 90% probability that the actual percentage is between 55% and 65%. This margin of error applies to the total sample. Subgroups with smaller sample sizes have greater margins of error. ■

Bank Board Unfazed by ARM Rate Risk

By PHIL ROOSEVELT

NEW YORK — An official at the Federal Home Loan Bank Board downplayed concerns that thrifts are offering adjustable-rate mortgages at rates so low as to invite losses.

"We don't have any concrete evidence that there's widespread mispricing," said James R. Barth, chief economist for the thrift regulator. "There may be some individual cases."

That view contradicts findings by the Federal Home Loan Mortgage Corp., or Freddie Mac. The secondary market agency maintains that up to half of all new adjustable-rate mortgages will result in economic losses for the lenders.

And earlier this week, Robert D. Horner, chairman of Citicorp Mortgage Inc., called the underpricing of adjustable loans "the No. 1 issue facing mortgage lenders."

Last week, lenders were offering the most popular type of adjustable loan at an average rate of 8.07%, or 20 basis points below the weekly average for one-year Treasury securities. In February, the average initial rate for that type of loan was nearly 100 basis points above the Treasuries, and two years ago it was nearly 250 basis points above the Treasuries. ■

AN AMERICAN BANKER SURVEY

Clients Say Relationships Unhurt by Bank Mergers

By GORDON MATTHEWS
Second in a Series

Mergers and acquisitions generally have not hurt the relationship between banks and business, but the banking industry's consolidation does not automatically mean better banking for corporate clients.

Companies responding to the *American Banker's* Corporate America Survey cited both benefits and problems associated with bank mergers. Respondents said the biggest pluses were improved and flexible services and the availability of additional capital. Significant problems ranged from personnel changes to excessive paperwork in dealing with newly merged banks.

More than 70% of the 413 firms surveyed said they had dealt with a merged bank. And an impressive three-fifths of the respondents — 61% — said their relationship with the merged banks remained the same as before consolidation.

On the other hand, a sizable minority, 37% of responding companies, said their bank relationship had changed. And, more important, the firms in this group were almost equally divided on the effects of the mergers. Of the total sample, 18.8% said their banking relationship was stronger, while 18.2% sensed a weaker bond.

There was a striking disparity between smaller and larger firms on this key issue.

Among middle-market companies, with annual sales of $10 million to $250 million, 40% said they believe their banking connection was differ-

Dingell Wants Foreign Loss Data To Aid His New Powers Decision

By ROBERT M. GARSSON
Washington Bureau

WASHINGTON — Rep. John D. Dingell, chairman of the House Energy and Commerce Committee, has demanded information about the London-based securities units of five U.S. banks, a move that signals his intention to play a major role in writing new banking legislation.

In a letter released last week, the Michigan Democrat cited Citicorp in particular, saying the big New York banking company's Dublin office lost $50 million during the October stock market crash "through violations of internal trading procedures."

A Citicorp spokeswoman declined comment, saying she has been unable to determine whether the bank received the Aug. 11 letter.

The letter was also sent to Bank of America, Bankers Trust Co., Chemical Bank, and Manufacturers Hanover Trust Co.

Mr. Dingell, a longtime opponent of new bank powers, linked the issue firmly to the debate over revision of the Glass-Steagall Act. He charged that the experience of the London units re-

AN AMERICAN BANKER SURVEY

Customers Say Relationships Survive Mergers

▸ Continued from Page 1

ent, and well over half of the smaller companies termed it weaker.

Among large corporate customers, with annual sales over $250 million, a slightly smaller 35% said their basic banking tie was now different. Three-fifths of these firms, or 20.9% of the total, said it was stronger than before the merger.

The first *American Banker* Corporate America Survey was conducted by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper. It is based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms. The interviews were conducted in March and April with the executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two samples: 205 middle-market companies with revenues between $10 million and $250 million, and 208 large corporations with annual revenues of $250 million or more.

The data suggest that after a merger, banks focus on large customers they presumably deem more important to retain. And the data indicates that many smaller firms, sensing change at their traditional banks, need reassurance or they might be inclined to change banks.

America
Speaks

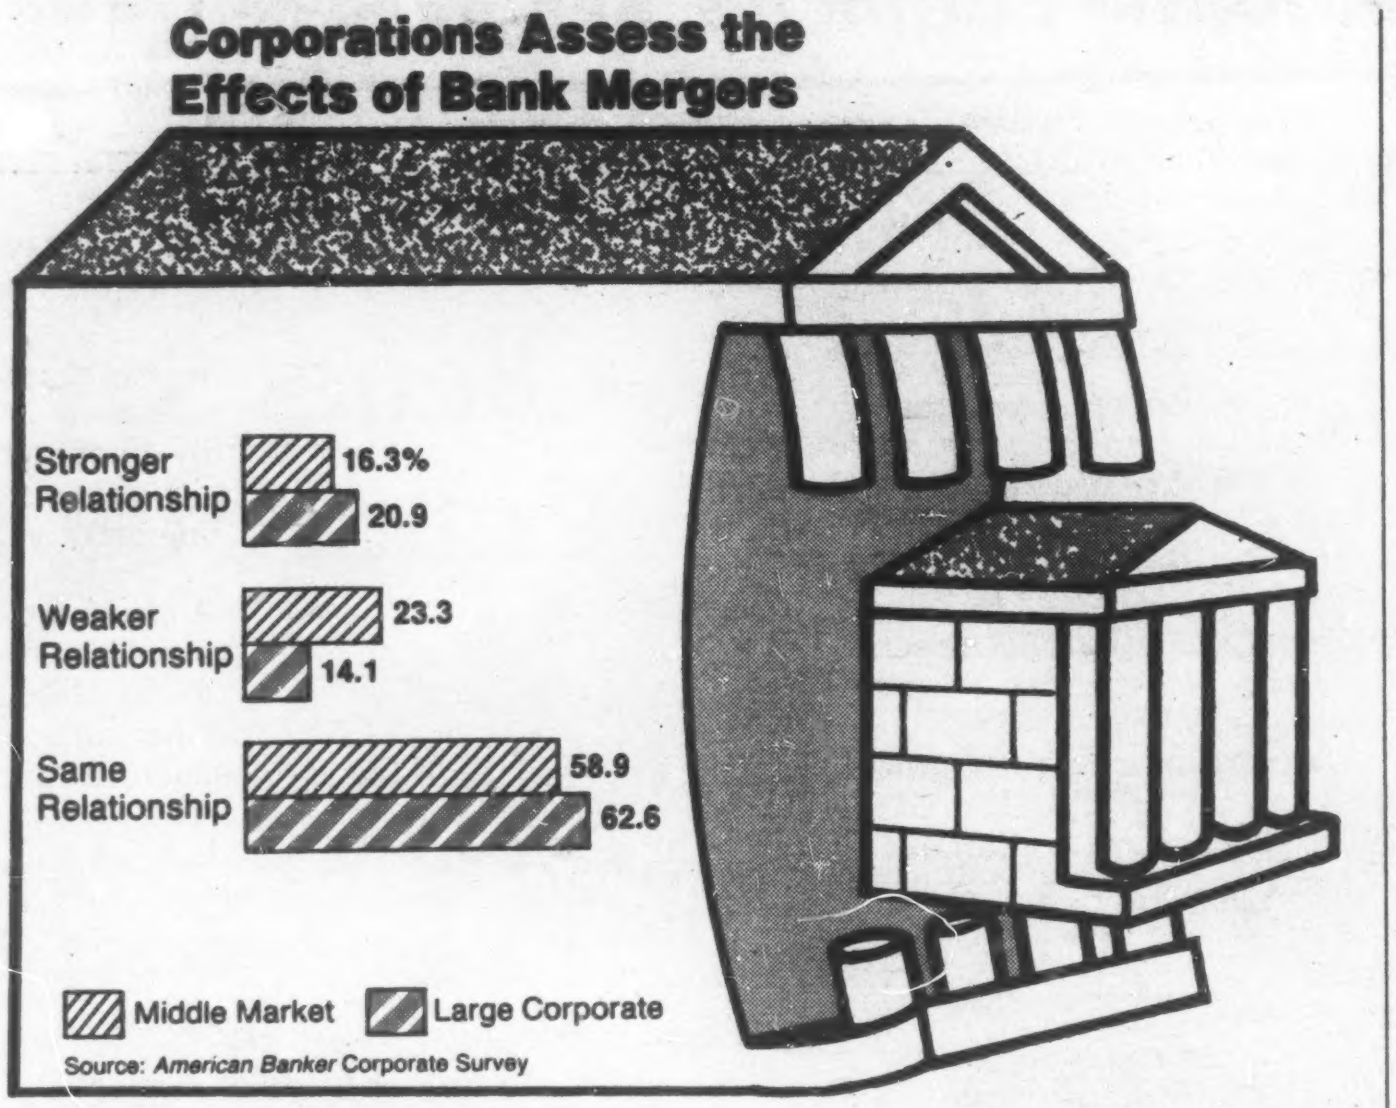
"Everybody has a routine, and business borrowers are very sensitive to the routine of borrowing money. With some, it's their lifeblood, and any possible complication in their relationship with their lender is very uncomfortable," noted John J. Lyons, a New York consultant who advises financial institutions on mergers.

"Mergers represent change, which is unsettling," said Virginia A. Adair, vice president of Merrill Lynch Capital Markets and a banking industry analyst. "Important efforts have to be made to avoid disruption and minimize the loss of corporate clients that are always possible in such a situation."

New or Better Services

The most frequently cited reason for an improved relationship with banks was new or better financial services — reported by nearly 40% of those companies reporting a change after a merger. "Our bank was able to add additional services with the merged institution," said an executive of a manufacturing firm in Washington State with nearly $500 million in sales yearly.

"Our bank merged with a large money center bank, so now we have a wide range of services available to us," a New York firm said. "It [a merger] gave us a much wider variety of services," echoed an Illinois firm with $1.3 billion in sales.



Corporations Assess the Effects of Bank Mergers

Source: *American Banker* Corporate Survey

The next most frequently mentioned reason for a stronger relationship in this situation, cited by about a third of the companies, was the broadened financial base of the bank that creates opportunities for obtaining more credit. "They used to have a lending cap; now they can lend us what we need," said a Virginia company with yearly sales of $34 million.

"The merger provided them with more money," said an official of a smaller Pennsylvania firm. "Now they're highly capitalized and able to lend more money."

An official from a Kansas firm with $2.9 billion in annual sales said, "The merged institution has more credit business with this company."

The increased size of a merged bank and the perception of greater stability were also noted, particularly by two Texas companies. "The bank is more solidly established now," said a company with $12 million in sales.

"It increased the ratings of the bank; it was a positive merger," said a larger firm, with sales of $273 million.

Turnover Is One Problem Cited

But corporate customers also noted some problems stemming from banking combinations — particularly personnel-related quality concerns — that bank managers may want to examine.

Turnover among account officers, especially, and other bank personnel was the biggest headache that firms said they encountered after their banks underwent a merger. Personnel problems were cited by 20% of the firms surveyed, and nearly as many companies complained about lack of personalized attention by banks.

These feelings parallel answers to other survey questions and emphasize the importance that corporate customers attach to their links with their banks.

"[The merger] made the smaller bank operate under the bigger bank's guidelines. We became a number instead of a client," said a Mississippi firm with $18 million in sales.

Personal attention is a key concern. "It seems that they don't pay as much attention to the wants and needs of the customer" after a merger, said one Texas business services company with sales of $263 million.

The lack of local decision-making was another problem arising from bank mergers that respondents mentioned. "They have no interest in a small community," was the plaintive remark of a Washington State firm posting sales of $17 million.

Red tape and confusion were other merger-related maladies. "We're getting statements from both banks. Delay in getting accessible money went from four days to 10," said a Colorado firm.

"Our accounts were shuffled, and the result was a great deal of confusion with bank personnel," said a California company.

"There's a lot more red tape. It's hard to get a question answered," lamented a North Carolina firm.

And an Oregon firm, which lists sales of $500 million, hit on a problem that frequently surfaces in the wake of mergers: "The calling officers are too preoccupied with internal developments."

Problems of the Little Guys

Part of the reason for greater concern among smaller companies is that "their relationship with banks is much stronger to begin with," said Mr. Lyons, a managing principal in the firm of Lyons, Zomback & Ostrowski.

"They need the banks more. The larger companies have financial options that smaller companies don't have — the capacity for shutting off valves and opening up others when they need to, so to speak."

The middle-market customers' concerns about mergers deserve attention from banks, "because it's a situation where the guys most upset are basically the guys who are paying the freight," Mr. Lyons said. "Rather than the big companies, it's the smaller firms that are paying the prime, and prime-plus credits."

The experience of most companies with bank mergers, as identified in the survey, coincides with the spread of interstate banking since mid-1985. At that time, the U.S. Supreme Court upheld the establishment of regional banking zones.

Since then, southeastern states and the northeastern region — in particular the New England states — have experienced the largest number of interstate mergers. The West and Southwest have experienced relatively fewer consolidations. The Midwest has lagged behind, although it is now beginning to catch up.

Following that pattern exactly, the study found that businesses in the South had encountered the most mergers, and firms in the Midwest had the least exposure to banking combinations.

Of the southern companies surveyed, 75.7% said they had encountered mergers, followed by 73.5% of northeastern companies and 71.4% of companies in the West. By comparison, only slightly under two-thirds of midwestern companies had dealt with merged banks.

There was also a variation in the types of companies that have been and are clients of merged banks. Nearly three-quarters of firms in the manufacturing sector had dealt with merged banks, while just under two-thirds of companies in the business services category had done so.

The manufacturers' businesses included food, textiles, furniture and fixtures, fabricated metal products, transportation equipment, printing and publishing, and similar industries. The business-services category includes hotels, amusement and recreation services, auto repair, heath care, and legal and social services companies.

It was business-service companies that most often felt a merger had strengthened their banking relationship. Twenty percent of business services companies offered this as-

Benefits of Bank Mergers

As cited by corporations *(In Percent)*

Source: *American Banker* Corporate Survey

How the Survey Was Conducted

The first *American Banker* Corporate America Survey is based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms.

Trans Data Corp., a research affiliate of the *American Banker*, developed the survey questionnaire in collaboration with the newspaper's editors and reporters. Trans Data, Salisbury, Md., conducted the interviews, tabulated the responses, and assisted in the preliminary analysis for the survey.

The interviews were conducted in March and April with executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more. Within those two groups, companies were randomly selected from a universe of 80,531 middle-market companies and 3,010 large corporations.

The sample has a margin of error of plus or minus five percentage points with a 90% confidence level. That means if 60% of the companies give a response, there is a 90% probability that the actual percentage is between 55% and 65%. This margin of error applies to the total sample. Subgroups with smaller sample sizes have greater margins of error. ■

BANKING TRENDS /COMMENTARY

The Toothpaste Tube, Canadian Customs, and Other Stories

By PAUL S. NADLER

WHEN you write a weekly column on banking, you are always looking for ways to relate what happens in the course of your days to banking and to your readers.

It is like the garment district operator who has a chance to go to Rome and meet the pope.

"What was he like, this fellow the pope?" his partner asks on his return.

"He's a 46 Regular."

Here are a couple of short ideas, none of which is worth an entire column, but all may have some value to a reader in the lingering days of summer.

The Toothpaste Tube

I visited my son, Saul, at camp — a ritual for American parents who send their kids away in the summer to have fun and learn how to play cards, tell dirty jokes, and otherwise get along in the real world.

I learned that this was a special camp. The owner really cared about what the parents thought and what

Nadler Says

'Why not have an annex for employee parking? It costs money, but it costs more to lose a customer because there is nowhere to park.'

their children learned. Naturally, this is important, for each camper has been carefully and painfully recruited. So if he does not come back next year, the camp director either has to do the recruiting job over or have empty space that is as costly as an empty airline seat once the plane has departed.

This explains why the counselors have been instructed, at the end of the summer, to squeeze half of each child's toothpaste down the toilet and rub the kid's toothbrush in the dirt. This is to make the parents think that the kids brushed their teeth all summer.

What a beautiful analogy to many banks' annual statements! They also are all shadow and no substance. The loan-loss reserve, the decision on whether to take losses on bonds, the decision to sell permanent assets to gain revenue for the year, even the decision to overfill the postage meters at the end of December to hide revenue give one the feeling that many bank statements are like my son's half empty toothpaste tube. They don't tell the real story.

The Supermarket

I visited a highly successful supermarket owner. In an effort to show my gratitude for his time, I mentioned that some supermarkets have minted money by owning their pay telephones. That way, they collect the quarters on local calls and pay the phone company far less than a quarter per call. Far more important, when long distance calls are made at the phone the customer is charged regular operator-assisted rates, while the bank or supermarket pays the phone company much lower direct-dialing rates to use the lines. Owning your pay phones is an idea many bankers should consider.

Then I mentioned another idea — that the supermarket should consider having automated teller machines in the store. The supermarket would handle the transactions for a fee and make good money providing an end terminal to the bank transaction network.

"No way!" replied this young, heads-up supermarket owner.

"We had a couple of cash machines in the store," he said, "serviced and owned by our local bank. If they broke during normal business hours, we would call the bank and they would send out an agent. He would place his jacket on some table or box, and in his white shirt he would fix the machine. But if it were evening or weekends, forget it. You couldn't get the banker out for anything.

"Until the banker is willing to work as hard and as long as we do," the owner said, "we don't want it. The customer blames us, not the bank, when the machine doesn't work, and we don't want any tie to an institution that works so selectively.

The Parking Lot

The same supermarket owner indicated that his basic problems were space, space, and space. There isn't enough room for the groceries, and there isn't enough room for some of the customers' cars.

As a result, he limits what he stocks because he wants to offer only the products that have high turnover and justify using his space.

How does that compare to banking, where all transactions get equal space and the person making a major deposit has to wait in a long line behind the people cashing welfare or payroll checks on a busy Friday afternoon?

What can be done about the space problem at a supermarket or a bank?

For the supermarket, how about an annex for bulk items like paper towels and soda? A shopper can get a price break by getting a receipt for soda instead of the actual cans, which he then has to lug to his car. He can take the receipt to the annex, where a clerk will place the cans or towels in the shopper's car on his way home. The func-

OVERVIEW /COMMENTARY

Budget Process, Not Quayle, Is the Real Albatross

By H. ERICH HEINEMANN

DEMOCRATS are having a fine old time trying to recast Dan Quayle as an albatross, and then hang him around George Bush's neck. The quality of the Vice President's judgment in selecting his own running mate is surely a legitimate topic for debate.

However, in aiming at the hapless junior Republican senator from Indiana (whatever his transgressions), Democrats — not to mention their surrogates from the fourth estate — are shooting at the wrong target.

The great dilemma in American political life today is clearly the breakdown of the federal budget process during the Reagan administration. The governing consensus that once ruled national politics is gone.

The major parties no longer have a zone of priorities within which they can agree to disagree. Washington has lost its ability to use the federal budget to guide the allocation of resources. The rudder the nation needs to steer itself into the future is broken.

The story has been told around Potomac campfires many times, but it is worth repeating: Ronald Reagan came to town determined to reverse the process of unilateral disarmament that started in the Nixon administration. Congressional Democrats were equally determined to preserve as much as possible of Lyndon Johnson's Great Society.

Since neither side was willing to support the taxes needed to pay for the other's programs, stalemate was the inevitable consequence. Naturally, this

Heinemann Says:

Wonder of wonders, Congress is likely to complete work on virtually all the major spending bills for 1989 before the new fiscal year begins on Oct. 1.

led to the biggest deficit-spending spree in U.S. history.

Neither Mr. Bush nor Mr. Dukakis has shown any real inclination to cut the Gordian knot. So chances are that the budget problem will get a lot worse (to find out how bad, just wait for the next recession) before it gets better.

Indeed, last fall the White House and Capitol Hill cut a backroom deal to postpone serious debate on the budget until after the election. A National Economic Commission was appointed to find a solution. Fat chance.

In the meantime, the cease-fire has held. Wonder of wonders, Congress is likely to complete work on virtually all the major spending bills for 1989 before the new fiscal year begins on Oct. 1.

Ironies abound. The Republicans rolled into Washington seven and one-half years ago largely on the basis of one simple pledge: to control federal spending and thus get government "off the backs" of the American people.

That was the promise. The result was that Ronald Reagan presided over the largest single increase in government outlays, bar none, in the entire postwar period. This is true both in absolute dollars, and, much more meaningful to economic performance, as a percentage of the gross national product.

President Reagan said he would cut taxes to give wage earners and entrepreneurs alike new incentives to "work, save, and invest." A broad-based, bipartisan effort has indeed turned the Internal Revenue Code upside down. Nonetheless, despite a bewildering reshuffle of tax liabilities, average tax rates have continued to rise.

Since 1981, individual payments of federal taxes have averaged more than 15% of personal income, up from 14.8% under President Carter, which was itself a postwar high. Last year, nonfinancial corporations paid more than 50% of their income in taxes, up from 35.1% in 1981.

Just as critical to the performance of the economy, the flood of red ink running out of Mr. Reagan's Treasury — which will total almost $1.4 trillion by the time the administration leaves office in January — has washed away much of the savings the nation needs to invest for posterity. Senior advisers to both Mr. Bush and Mr. Dukakis have predicted that as one result, U.S. living standards are likely to grow far less rapidly in the 1990s than earlier in the postwar period.

The figures are striking. According to the nonpartisan Congressional Budget Office (CBO), net domestic saving has averaged just 3.1% of GNP since 1980, less than half of the average of 7.5% from 1950 though 1979.

The shortfall in savings has been off-

EXECUTIVE CHANGES

Top Spot for Decker At Westamerica

Richard W. Decker Jr. has been appointed president, chief executive officer, and a director of **Westamerica Bancorp.** and Westamerica Bank, San Rafael, Calif., effective in mid-September.

Mr. Decker is executive vice president and chief administrative officer of First Interstate Bank of California, where he has been employed since 1973. He was responsible for marketing, strategic planning, acquisitions, human resources, internal communications, public affairs, audit, legal, security, personal financial management, and auto lending. He was also a member and director of the managing committee and a director of First Interstate Bancard Co.

AMITY BANCORP, New Haven, Conn., has elected **James Stokes Hatch** president and chief executive officer of the holding company and of Amity Bank, succeeding **Jasper J. Jaser.** Mr. Hatch is chairman of Connecticut Electric & Switch Manufacturing Corp., which he acquired in 1986. He was president and chief executive officer of the Canaan National Bank, Canaan, Conn., from 1977 to 1985. In 1976 and 1977, he served as a senior staff member of the National Commission on Electronic Fund Transfers in Washington.

Fred Nives, chairman of Amity Bancorp and Amity Bank, said Mr. Jaser resigned "to pursue his long-term objectives and opportunities." Mr. Jaser joined Amity Bank as president and chief executive officer in 1985. He will continue to serve Amity Bank as a consultant, Mr. Nives said.

BARCLAYS AMERICAN/BUSINESS CREDIT, Chicago, has named **Philip F. Strauss Jr.** group senior vice president and manager of the central group in the business finance division. Mr. Strauss oversees business development activities and administration of loans in the 13 states that make up the division's central group. He is responsible for marketing centers in Chicago and Detroit and for a loan administration auditing and operations office in Wauwatosa, Wis.

NORWEST BANK MINNESOTA, Minneapolis, has named **Ronald Whitcomb** president of its Bloomington office. Mr. Whitcomb, who joined Norwest in 1982, had been president of one of the bank's Minneapolis offices. He succeeds **William Wilkening,** who has left the company.

Fred Mann was named to succeed Mr. Whitcomb. Mr. Mann was vice president and manager of loan support for Minnesota community banking.

UNITED MISSOURI BANK OF KANSAS CITY, Kansas City, Mo., has elected **J. Lyle Wells** chairman of the board. Mr. Wells succeeds **R. Crosby Kemper,** who has been named senior chairman of the board. **Malcolm M. Aslin** continues as president and chief executive officer of the bank.

William H. Shackelford 3d, a 19-year veteran of First National Bank of Kansas City, has been elected a vice chairman and advisory director of the United Missouri board.

Since 1987, Mr. Wells has managed the commercial banking division, which includes metropolitan and national business development departments, commercial lending, international banking, and correspondent banking. Mr. Shackelford has been an executive vice president in the commercial banking division since 1986, when he joined United Missouri.

— **Franklin Smith**

FDIC Makes Minor Change in Bidding Process

▸ Continued from Page 1

the bidding.

Originally, the FDIC said there would be no restrictions on NCNB pursuing those customers. That stand was harshly criticized by some bidding banks, which maintained it would drive down the value of the portfolio.

After a review of the issue, the FDIC now has decided to make NCNB wait 30 days before soliciting customers, according to an agency letter obtained by the *American Banker.*

But some potential bidders maintained the delay alone does not make a difference. One banker, who did not want to be named, called the delay "a smidgen away from useless."

This banker, whose institution is interested in bidding on the portfolio, said his legal department believes the FDIC's formal review may have eliminated any chance of taking the regulator to court over the issue.

"NCNB has been granted outright title and privilege to the customer list," he said. "As owner of the bank, the FDIC has set terms for the sale."

Because prospective bidders won't be able to take legal action, the value of the bids probably will be reduced further, the banker asserted.

NCNB, based in Charlotte, N.C., has been acting as manager of the credit card bank, now called the Delaware Bridge Bank, since the FDIC assumed ownership Aug. 2. As manager, NCNB has had complete access to information about its credit card customers.

The FDIC letter to NCNB states that 30 days after a winning bid for the Delaware bank is named, NCNB would be able to solicit customers "using information maintained in the Texas Bank or otherwise available."

The letter was signed by John W. Stone, the FDIC's assistant director, division of bank supervision, and addressed to Timothy Hartman, a lawyer for NCNB.

NCNB agreed on July 29 to take over 40 of First RepublicBank's other subsidiaries with an initial $4 billion in federal assistance. The new unit is called NCNB Texas National Bank or the Texas Bank.

The FDIC said Friday that it has delayed the deadline for submitting bids for two weeks. "Interested bidders have indicated that they would need until Sept. 9 to examine tax and other issues related to an acquisition and also formulate bids for submission to the FDIC," the agency said.

Bidding for the bank has been delayed repeatedly since the original date, Aug. 12.

Some bankers said additional information on the tax treatment of such a transaction was made available to prospective bidders earlier last week.

They said it might take two or three days to review the information, but not two weeks. The delay, they said, gives NCNB a chance to glean more information from the credit card portfolio.

The FDIC declined to comment on any aspect of the NCNB letter or charges made by bankers.

Two weeks ago, FDIC officials said they were granting some special treatment to the North Carolina bank because of NCNB's purchase of First RepublicBank.

In initial negotiations between NCNB and the FDIC for First Republic, the credit card bank was to be included in the NCNB acquisition. But the FDIC did not close the credit card bank in time for it to be part of the transaction.

NCNB agreed to go ahead with the First Republic deal as long as the FDIC did not require it to sign a noncompete clause for the credit card customers. ■

AN AMERICAN BANKER SURVEY

Businesses in Poll Say Relationships Have Been Unharmed by Bank Mergers

▸ Continued from Page 2

sessment.

On the other hand, firms specializing in wholesale trade offered the most pessimistic view, with 27.1% citing weakened ties with their banks.

For banks involved in or considering mergers, the message seems to be that the vital relationships between banks and their corporate customers must be preserved and protected and special reassurance provided for smaller firms.

According to Mr. Lyons, the best model for accomplishing this may be First Chicago Corp.'s 1984 acquisition of American National Corp., Chicago, and its subsidiary, American National Bank & Trust Company of Chicago. American National is considered the premier middle-market lending bank in the Chicago area.

First Chicago "has allowed American National to keep doing what it does best," he said. "They haven't moved in at all, although the banks are literally right down the street from each other, and the commercial client relationships at American National haven't been disturbed.

"First Chicago basically decided they were buying the corporate client relationships of American National, and they let them do their own lending," Mr. Lyons said. "Commercial relationships are the big element you're buying when you acquire a commercial bank. That's what you pay the premium for.

"For an acquiring bank to pay a premium for another bank and then proceed to foul up the commercial relationships it bought really adds up to shooting yourself in the foot."

Next: Corporate customers say quality of banking service carries more weight than any other determinant. The first part of this series ran Aug. 26.

Hogan, Bank of Tokyo Sign $4 Million Deal

DALLAS — Hogan Systems Inc., a bank applications software vendor, has signed $4 million worth of agreements to provide software and services for the New York operations of Bank of Tokyo Trust Co.

The Dallas-based firm initially will install all modules of its International Money Management System, or IMMS, at the New York agency of Bank of Tokyo Trust Co. and affiliated BOT Securities Inc. The bank plans to support other affiliates in North America on the system.

IMMS is an integrated real-time system that runs on IBM mainframes. Bank of Tokyo said it selected IMMS because it provides multicurrency accounting and multibank functions and runs on DB2, IBM's strategic relational data base management system. ■

Idaho Group Acquires Washington Company

BOISE, Idaho — Moore Financial Group agreed to acquire the Community Bank of Renton, Wash., for $7.8 million in Moore common stock.

Community Bank has two offices in Renton and $42 million in assets. Moore expects to complete the transaction early next year, pending approval of regulators and Community Bank's shareholders.

Separately, the Federal Reserve Board said it has approved an application by Moore Financial to expand into Washington State by acquiring Western Bank Holding Co., Bellevue.

Moore, with $3.5 billion in assets, already operates banks in Idaho, Oregon, and Utah. Western owns the $30 million-asset First Western Bank in Bellevue.

Idaho and Washington State have reciprocal interstate banking laws. ■

Mobil Net Grows To 45 Million Cards

▸ Continued from Back Page

curity, cardholders enter a personal identification number on a hooded keypad in the service station office.

The Mac network consists of 4,900 automated teller machines in its five-state area, and more than 3,000 retail terminals that accept the card for payment.

The Mobil deal is the latest in a series of expansion moves by Mac this year. It is currently absorbing the competing Treasurer ATM network in New Jersey. And by mid-1989 it plans to convert the 68-bank Pocketbank system in New Hampshire. ■

Dear Reader, How Are We Doing?

The *American Banker* wants to make sure our Corporate America Survey meets your information needs. So would you spend a moment to give us some feedback? Worth Repeating

I can't believe Irving has any defense from Bank of New York now.

Lawrence Cohn, bank analyst at Drexel Burnham Lambert Inc., after BCI's withdrawal of its friendly bid. [Page 1]

White Knight Drops Its Bid for Irving

Italian Bank Balks at Requirements Set by Federal Reserve

By GORDON MATTHEWS and BART FRAUST

NEW YORK — Banca Commerciale Italiana, Milan, said Monday it is dropping its friendly bid for Irving Bank Corp. because of requirements imposed by the Federal Reserve Board. Since April, the Italian bank had been Irving's white knight in its bitter fight against a hostile takeover by the Bank of New York Co.

BCI, which had offered to buy 51% of Irving, said it regretted not being able to complete a "mutually beneficial transaction," but said it would not be appropriate for its parent, an Italian government agency, to meet the Fed's conditions.

Irving chairman Joseph A. Rice expressed sharp disappointment at the turn of events and said his bank would immediately begin an "intensive effort" to find another friendly bidder.

Meanwhile, a spokesman for the Bank of New York said, "We are pleased with this development and we intend to vigorously pursue the offer we have on the table."

Banking industry analysts agreed that the development is undoubtedly a severe blow to Irving's defenses against its persistent suitor. But they were cautious about predicting what might happen next in the nearly year-old contest between two of New York's most venerable banking institutions.

"This is a terrible disaster for Irving," said John Lyons, a principal of Lyons, Zomback & Ostrowski Inc. "If BCI is supposed to be Irving's friend, the least it could have done was hang around awhile and signal to Irving that it was backing out so Irving could make nice with Bank of New York. Now Irving's thrown completely at the mercy of Bank of New York."

The dramatic move came 10 days after the Fed told BCI's parent, Istituto per la Riconstruzione Industriale, or IRI, that it must apply under the Bank Holding Company Act in connection with the Irving deal. IRI is a huge Italian state holding company.

The withdrawal decision reversed a BCI statement last week that its parent would comply with the Fed edict. A source close to BCI said the turnaround occurred because

AN AMERICAN BANKER SURVEY

Service Counts Most with Corporate Customers

By PHILIP T. SUDO
Third in a Series

Corporate
America
Speaks

The overriding determinant in a good banking relationship is the quality of service received by corporate customers — so say the customers themselves.

In a survey of financial decision makers by the *American Banker*, 29.3% said quality of service is the most important factor in a banking relationship. Ranking next in importance were three other service-related factors: timeliness, 16.5%; a personal relationship, 13.8%; and variety of service, 9.9%.

Credit availability, 10.9%, was the only nonservice factor to receive greater than a 10% response.

Pricing Ranks Second: Page 6

The first *American Banker* Corporate America Survey was conducted by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper. It was based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms. The interviews were conducted in March and April with the executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more.

When asked to name the second most important factor in a banking relationship, respondents again named service. Quality of service received a 13.2% response, and variety of service tallied 13%.

Cost apparently had little to do with the perceived success of a relationship. Interest rates, service fees, and rates of return ranked at or near the bottom in importance to corporate customers.

The results seem to indicate a prefer-

IN THE NEWS

July Home Sales Drop

WASHINGTON — Sales of new single-family homes dropped about 5% in July, to a seasonally adjusted annual rate of 686,000, the government reported on Monday.

Thomas M. Holloway, senior economist for the Mortgage Bankers Association of America, attributed the "discouraging" sales drop to rising mortgage interest rates, adding that August's round of rate hikes is likely to depress sales further.

The report, by the Department of Commerce and the Department of Housing and Urban Development, said the current supply of new houses will take 6.6 months to sell, compared with the six-month inventory that Mr. Holloway said builders prefer.

Belgian Subsidiary Sold

BRUSSELS — Continental Illinois National Bank and Trust Company of Chicago has announced the sale of its Belgian subsidiary to Banco Hispano Americano of Spain and Bacob Savings Bank of Belgium.

In a joint statement, the two purchasers announced that Banco Hispano will acquire 75% of the unit, and Bacob Savings the remaining 25%. Terms of the transactions were not disclosed. The bank will be renamed Banco Hispano Americano NV-SA. As of yearend 1987, Continental Bank NV-SA had assets totaling 30 billion Belgian francs, with a net profit of 64 million francs.

Coast Federal Deal May End

SARASOTA, Fla. — Tampa investor Hugh F. Culverhouse may end his agreement to acquire Coast Federal Savings & Loan Association, Sarasota, due to concern over the thrift's financial condition. Coast Federal said it will fight this move.

Mr. Culverhouse, who made the offer through his wholly owned Palmer Financial Corp., said he might have a statement by the end of the week on his offer to acquire Coast for $20 per share cash, about $71.9 million. The price increases at 8% annually from July 15.

Mr. Culverhouse owns 9.9% of Coast Federal. Shareholders of Coast Federal approved the acquisition last week.

Holding Company to Barnett

JACKSONVILLE, Fla. — Barnett Banks Inc., with assets of nearly $1.6 billion, has agreed to acquire ANB Bankshares Inc. of Brunswick, Ga., in a stock swap valued at $47.7 million. ANB, a two-bank holding company, has assets of over $211 million.

Argentina To Sign Loans

BUENOS AIRES — Argentine officials said Monday that the country will sign an agreement this week for $750 million in new World Bank loans.

Shamad Husein, World Bank vice president for Latin America, reportedly has been in Buenos Aires for the past two weeks negotiating the agreement.

PNC Launches Liquor Deal

PITTSBURGH — PNC Financial Corp. said it will process credit card transactions and provide related cash management services for the 700-store system operated by the Pennsylvania Liquor Control Board.

Seven of the liquor stores have been accepting MasterCard and Visa payments in a test that began July 20. PNC Financial said Monday it is extending the service immediately to 59 of the remaining locations.

AN AMERICAN BANKER SPECIAL REPORT

Deposit Growth Slows at Nation's Top 300 Banks

By JOHN P. FORDE

NEW YORK — The rate of deposit growth at the nation's 300 largest banking companies slowed to only 1.5% in the first half of this year, an *American Banker* survey shows.

The 300 largest banks in the country at midyear 1988 reported $1.47 trillion in total deposits, compared with $1.45 trillion last Dec. 31 and $1.39 trillion on June 30, 1987.

These are some of the findings of the *American Banker*'s semiannual survey of the nation's largest banks. Information for the survey was gathered largely from questionnaires sent to the top banks.

Citibank, with $105 billion in deposits, remained the nation's largest bank at midyear 1988. Bank of America NT&SA, San Francisco, was second largest with $67.7 billion in deposits, down from $70.2 billion at yearend 1987.

As banks prepare to meet the new capital-to-assets ratios that will soon be imposed by federal regulators, they are reducing the amount of loans and other assets that they keep on their balance sheets.

List of Top 300 Banks: Page 26

With assets shrinking, the big banks' volume of deposits has also decreased. The ten largest banks in the nation at midyear had a 1% decline in total deposits since the end of 1987. Of the top ten, six showed increases in deposits and four showed declines.

The fastest-growing bank among the 300 largest was one of the smaller ones, Citibank Arizona in Phoenix, and many banks reported that mergers and consolidations had more to do with their increases than any other factor.

Citibank Arizona, Phoenix, grew from $524 million in deposits at yearend 1987 to more than $2.2 billion six months later. A Citicorp spokesperson attributed the growth to the acquisition of $2.5 billion-asset United Bank of Arizona, which was completed on June 13.

There were some shifts in the size of other specialty banks in the Citicorp organization during the first half of this year. At Citibank South Dakota, one of

COMMENTARY

Fundamentals of Collateralized Lending Deserve Another Look

By ROBERT J. FIGURSKI

ROBERT Miller, president of Congress Financial Corp. and an acknowledged expert in leveraged buyout financing, once commented he has never seen an LBO projection where the borrower might go under. But many do. There's a strong lesson there: Make sure you stick to basics in collateralized lending.

Banks generally make secured loans for one prime reason: The borrower lacks the strength and liquidity necessary to give the bank the confidence it needs to extend the loan on an unsecured basis.

This being the case, what is the purpose of collateral? Collateral is not window dressing to help the loan officer get loan committee approval. Collateral exists to repay the loan should adversity hit the borrower's business.

Never make a loan simply because of an abundance of collateral. Extend the loan only if it makes sense and the borrower appears to be viable. If for any reason the borrower does suffer heavy losses, the collateral can then be liquidated to pay off the bank's loans — plus interest — as well as legal and liquidations cost without loss (After a filing and with the blessing of a bankruptcy court, of course).

> 'Loan officers are often reticent about asking themselves tough questions because they are afraid of losing an account. But it is better to lose an account than cause the bank to suffer a loss.'
>
> — Robert J. Figurski

Is it possible to make business loans ad infinitum and never lose money? Of course not. But lenders have a big responsibility to do whatever they can to minimize losses.

First, assess the collateral from a liquidation point of view. Only then can you determine what kinds of collateral are needed, and how much. If there is more than one type of collateral, determine the loan value of each type. Before making a loan, set up a worst case scenario. Determine how much you might expect to realize on the collateral if the borrower were to liquidate.

This does not suggest that a loan should be denied if the liquidation value of the collateral — in a worst case situation — is insufficient to cover the loan, plus default interest and legal expenses. Rather, it provides a clue to the upper limit of the loss exposure.

Having determined that, ascertain if the upper loss limit is tenable for the bank. Decide if the loan is properly structured and priced.

Loan officers are often reticent about asking themselves tough questions because they are afraid of losing an account. But it is better to lose an account than cause the bank to suffer a loss.

A sizeable loss makes it more difficult for the bank's senior loan people to be positive about other borrowers brought to the loan committee by that loan officer. Finally, a bad loss surely doesn't help a bank loan officer's career.

While there are several kinds of collateral that a bank can take as security for loans, the two basic types are accounts receivable and inventory.

Those who take a lien on receivables and inventory for "added precaution" are destined to lose money on loans. You either need collateral, or you don't. And it doesn't stop with the filing. To protect his bank, a loan officer should receive current information on collateral that must be properly analyzed and controlled.

Aging of Receivables

Many lenders file for the collateral and then forget the loan. Some follow aging of receivables and monthly inventory reports once a month. That's simply not enough.

Aging of receivables and reports often arrive late, if at all. In either case, they are history. A lender must analyze the aging, look for concentrations, check for contra accounts, sales to affiliates, or even determine what goes into the aging. Verify if the invoice has been billed, but not yet shipped. Has the merchandise even been made? Does the aging reflect the invoices as based upon original invoice date?

Ask any borrower if the aging of receivables is correct, and he will reply either that it is or that it will be shortly. My 20 years' experience in accounts receivable and inventory lending tells me that the accuracy of a borrower's accounts receivable agings and inventory reports often leaves a lot to be desired.

The only safeguard: Periodically send an unannounced auditor to verify the borrower's collateral reports.

Even if a monthly collateral report is accurate, it represents a snapshot of the accounts receivable and inventory collateral on the date of the report.

Consider what happens just before a company goes under. Trade creditors, who are already owed a lot of "seriously past due" money, limit — or cut off — sales to the borrower. The borrower naturally tries to maintain sales. So whatever he has in the inventory that can be sold, does in fact get sold.

What happens to the inventory collateral? First, its total dollar value drops and then, as the quick-moving merchandise is sold, the amount of slow-moving inventory collateral, relative to the total amount of inventory, increases.

On accounts receivable collateral, as the quick or saleable inventory lessens, the borrower's sales drop off. Receivable collections from the stronger customers quickly start to exceed the amount of new sales invoiced.

What happens to the inventory collateral also happens to the accounts receivable collateral. Quantity and quality deteriorate rapidly.

To avoid, or at least lessen, losses on loans secured by accounts receivable and inventory, the collateral must be monitored on a day-to-day basis by a well-trained and observant collateral staff.

It's not easy and it's expensive. But remember that one sizeable loss will more than exceed the cost over several years of a few competent collateral control personnel.

One other caveat: A borrower sometimes will not provide requested information for one of two reasons: He can't or he won't. If he can't, expect a lot of difficulty realizing on the collateral at collection time. If he won't, and refuses to cooperate at the outset, he certainly won't cooperate at liquidation time. Given these two possibilities, perhaps the loan should not be made. ■

BRIEF COMMENTARY

Fed Governor Accentuates the Positives

The following is excerpted from a statement delivered this spring by H. Robert Heller, member of the Federal Reserve Board, before the Senate Banking Committee.

□

IN reviewing the year's events and the aggregate data on bank performance, one could easily conclude that banking is not a very good business to be in these days. However, that conclusion would be incorrect.

To be sure, banking is no longer a highly protected and sheltered industry. Competition and deregulation have altered the dynamics of the industry and have created an environment in which there are now clear winners and losers.

This new reality is evident behind the aggregate statistics, in the results for individual companies. We find that although many banking organizations reported very poor results in recent years, many others have turned in exceptionally strong performances. The large interstate banking organizations operating in the Southeast, New England, and the Middle Atlantic states are cases in point.

In recent years the problems in the banking sector have received a good deal of attention, as indeed they should. But all too little attention has been given to positive developments within the industry.

First of all, the ability of the overwhelming majority of institutions to absorb the severe shocks and stresses of recent years reflects their underlying strength and that of the banking system as a whole.

Second, bank managements have focused on the need to improve operations. They are rethinking their strategies and moving to restructure and streamline operations in order to meet the competitive challenges and enhance their profitability.

They are focusing on improving credit analysis and on strengthening lending standards and risk-control systems. The capital positions of many of the larger money center institutions are also being strengthened in order to meet the demands of the market and to comply with the proposed risk-based capital standards.

We are beginning to see some improvement in the asset quality of the domestic loan portfolios of banking institutions outside of the Southwest. While long overdue, this improvement should translate into better earnings performances.

Earnings in the first quarter of this year appear to support this view. Yet, despite the positive signs, much work remains to be done by bank managers and supervisors alike before we can fairly say that the problems that beset many of our banking organizations are behind us. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number. Letters may be edited for reasons of space and clarity.

Remember, we need your views to be a true community newspaper.

AN AMERICAN BANKER SURVEY

Firms Don't Switch Banks Because of Pricing

By **LISABETH WEINER**
Midwest Bureau

Everybody loves to save money, but the prospect of hanging on to a few dollars isn't incentive enough for most executives to change their primary banking relationship.

Executives responsible for dealing with banks and other financial institutions say they look at the service they are getting before studying the bottom line. Even when fees are high or interest rates low, the bond between company executives and bankers appears to be thicker than dollar signs.

The first *American Banker* Corporate America Survey found that only 9.7% of the executives of large corporations and 5.9% of those from the middle market rank pricing as the most important factor in their banking relationship.

Corporate America Speaks

The survey was conducted by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper. It was based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms. The interviews were conducted in March and April with the executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more.

Twenty-four percent of the executives from corporations with more than $250 million in annual sales and 12.5% of those from firms with sales of $10 million to $250 million cited pricing as the second most important factor in a banking relationship.

The survey also found that a large company is slightly more inclined than a middle-market firm to change its primary financial institution because of pricing. Among those surveyed, 14.7% of the large companies and 7.6% of the middle-market firms said high fees would prompt them to look for another banker.

But only 5.6% of the smaller companies and 5.9% of the large ones have actually changed banks because of high fees.

John Guequierre is in that minority. On March 3, 1987, Mr. Guequierre, senior vice president of administration of Schult Homes Corp., Middlebury, Ind., changed his lead bank when the company's $11 million revolving credit agreement was rebid at a lower price.

"Service and support had a role to play in this, but pricing was the key thing," he said.

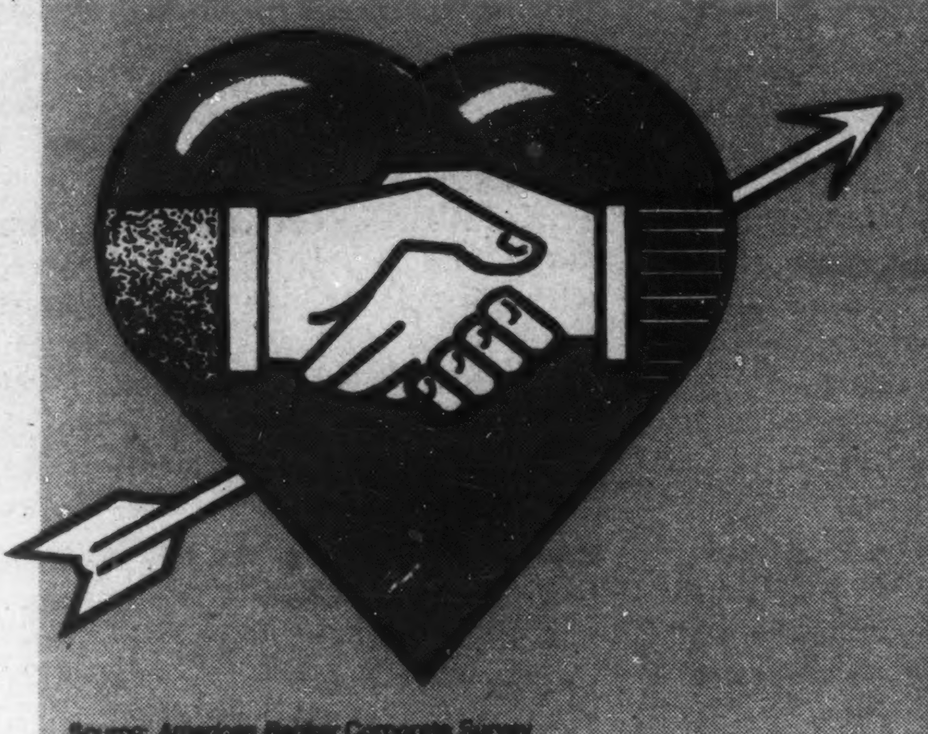
Schult Homes, a home builder with 1987 sales of $115.5 million, had significantly reduced the amount of its outstanding debt, so the pricing on its credit pact was sure to decrease.

"That created the opening," he said. "There were several bidders, and we switched to the one that came in the lowest." The spread on the revolver was cut from as much as 1.5 percentage points over prime to prime plus 0.25 percentage point.

Mr. Guequierre was able to win other improvements in the loan package as well. In addition to pricing based on the prime rate and the London interbank offered rate, he now has access to a banker's certificate-of-deposit rate and has the flexibility to take portions of the revolver and put it into longer-term investments.

Mr. Guequierre acknowledges, however, that if his company had been using only noncredit services, he might have stressed quality and reliability over pricing.

Corporate Clients Say Service Is Key



What is most important in a relationship?

	Middle Market	Large Corporate
Quality of Service	27.3%	31.2%
Timeliness	15.1	17.8
Personal Relationship	14.6	13.0
Credit Availability	12.7	9.1
Service Variety	10.2	9.6
Knowledge of Company's Business	6.8	3.8
Interest Rates Charged	3.4	6.3
Location or Convenience	2.4	1.0
Rate of Return	1.5	0
Service Fees	1.0	3.4

Service Can Make a Difference

Poor service was reason to change banks for Lester Bern, assistant treasurer of Material Sciences Corp., an aluminum and steel specialty products company with annual sales of $152 million.

When Mr. Bern joined the suburban Chicago company more than three years ago, he contacted the company's local bank to introduce himself.

"Nothing happened. They didn't respond," he said of the bank, which handled payroll and other services for Material Sciences. "There was nothing warm and fuzzy about the relationship."

Mr. Bern quickly found another suburban bank, and the experience made him a true believer in the value of service.

"I am not going to change a bank relationship that works smoothly for a couple of basis points," he said.

That attitude has a cost-effective side. Bank pricing in general is tight and competitive, and the differences that do exist are usually small. An executive who decides to look around for a cheaper deal may end up "expending a lot of effort for not much change in savings," Mr. Bern said.

"Bankers realize that in an ongoing relationship, where everything works smoothly and the bank is comfortable with the company, [banking service] becomes more of an inelastic demand," he said.

In fact, the cost of ending a relationship can be considerable in both money and time.

Eugene Baker, chief financial officer for Phoenix-based Emerald Homes, said it has taken him more than a year to extricate the company from a relationship that deteriorated along with the health of the bank. New senior management was brought in, but service declined. "Upper management changed, and the attitude of the bank changed," he said.

"Ending a relationship with a bank is a long, drawn-out process," he said. "Here we are a year later and it's still going on. That's one reason not to change for a few basis points."

If the pricing discrepancies were to widen, however, executives might become more sensitive to the issue.

> A large company is slightly more inclined than a middle-market firm to change its primary bank because of pricing.

"I would be concerned," said Dan Mullen, treasurer at Talley Industries Inc., Phoenix. "And then I would try to determine the shift in the marketplace that allows one bank to be so much lower in its pricing than another."

Sometimes, however, a higher fee buys security. Donald Gullquist, vice president of finance at Enron Corp., Houston, said he is willing to pay a little more for quick responses and dependability if the energy company, which has annual sales of $10 billion, should suddenly need a large sum of money.

"I can see agreeing to a commercial-paper backup line of credit from a European or Japanese bank priced at one-sixteenth if you know you aren't going to use it," Mr. Gullquist said. "But you can't get in at one-sixteenth and raise $2 billion. A U.S. bank would charge one-eighth for a backup line. But when it comes to a transaction you'll want the U.S. bank because the Japanese can't respond fast enough."

Pricing may be more of a factor for companies that consider excellent service part of the package — not an option — when they sign on with a bank.

"I can't remember an instance where service was really poor," said William Gardner, treasurer of Apogee Enterprises Inc., Minneapolis. "Oh, maybe there was some little thing 15 years ago. But my general perception is that there will be a high level of service, and I make that clear when I evaluate a bank's proposal."

Because he considers good service to be a given in a banking relationship, price is probably the most important factor to him, he said. "On a $25 million revolving credit agreement," he said, "the difference of 30 basis points is $75,000 a year. I'd be tempted."

Some banking observers say market conditions have allowed corporate executives to put bank pricing at the bottom of their list of priorities. Christopher Snyder, president of Loan Pricing Corp., New York, said weak loan demand and low interest rates may have created a buyers' market, making pricing less of an issue in recent years.

"If a treasurer says pricing is not an issue, then he's also saying 'my bank is not very important to me,' " Mr. Snyder said.

Market conditions that allow that type of attitude could change, however. Since the start of the year, loan demand has rebounded in many parts of the country, a situation Mr. Snyder said gives banks the perfect opportunity to raise prices.

"Borrowers are busy," he said. "As one company executive told me, 'I don't make money by switching banks, I make money by selling my product.' "

Data Source: American Banker questionnaire. The data requested are consolidated—for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank — under whose charter the merger took place — is considered the surviving bank.

Data Source: American Banker questionnaire. The data requested are consolidated—for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank — under whose charter the merger took place — is considered the surviving bank.

Data Source: American Banker questionnaire. The data requested are consolidated—for the bank and its domestic and foreign subsidiaries. American Banker requests deposit data as reported on the Federal Regulatory Report of Condition (RC-Balance Sheet, items 13a plus 13b), whenever possible. Data may not be comparable with other periods because of mergers, changes in accounting practices, etc. In the case of mergers, the bank — under whose charter the merger took place — is considered the surviving bank.

West	37	261.6	17.8
Midwest	59	210.0	14.3
Southeast	58	201.6	13.7
New England	21	91.3	6.2
Southwest	27	65.4	4.4
Total	**300**	**$1,471.2**	**100.0%**

▸ Continued from Page 3

the company's three banks dedicated to the credit card business, deposits receded 15% to $1.6 billion as of June 30. Deposits also slipped at Citibank's Las Vegas bank, which focuses on the credit card business.

Citicorp recently added a Maryland bank to its credit card operations, and a spokesperson said there might have been some deposits shifted among the three banks.

New state laws allowing bank holding companies to consolidate their small subsidiaries into larger institutions helped many banks move up in the listing.

First of America Bank-Southeast Michigan, Detroit, for example, grew 146% to $2.3 billion in deposits at midyear 1988 from the end of the previous year. The bank is a subsidiary of First of America Corp., Kalamazoo, Mich.

A First of America spokesperson said the increase was caused by the combination of banks in four Michigan cities: Detroit, Royal Oak, Pontiac, and Rochester. This consolidation was made possible by a recent law allowing statewide branch banking.

Deposits Grow After Merger

Deposits at First RepublicBank, Fort Worth, increased 107% to $1.6 billion as of June 30 from $755 million at the end of 1987. The growth was caused by merging nine separate neighborhood banks in Fort Worth County into the institution, according to James R. Perry, president and chief executive officer.

As of July 29, however, First RepublicBank Fort Worth was merged into a Dallas subsidiary of NCNB Corp., Charlotte, N.C., called NCNB Texas National Bank. That is the new one-bank holding company NCNB established after it took over First RepublicBank Corp. in a government-assisted bailout.

The top 300 ranking, based on total deposits as of June 30, included banks from 44 states and the District of Columbia. The six states that had no banks among the 300 largest in the nation were Arkansas, Montana, New Hampshire, North Dakota, Vermont, and West Virginia.

Not surprisingly, the state with the most institutions on the list, as well as the highest dollar figure of deposits, was New York. The Empire State was home to 31 of the 300 largest institutions, which together accounted for $455.9 billion in deposits.

The next most popular home for a top 300 institution was New Jersey, which had 22 of the 300 largest banks in the nation. California, Florida, and Pennsylvania each had 18 banks on the list.

California came second in the ranking in terms of deposits, with $189.3 billion. It was followed by Pennsylvania ($74 billion), Illinois ($63.8 billion), and Florida ($59.3 billion).

Breakdown by Regions

In a regional breakdown of the list, the Mid-Atlantic states, home to most of the nation's largest banks, easily had the most deposits.

Ninety-eight banks in the Mid-Atlantic region, comprising Delaware, the District of Columbia, Maryland, New Jersey, New York, Pennsylvania, and Puerto Rico, reported total deposits of $641.3 billion. This amounted to 44% of the total for the top 300.

The other regions are composed as follows: The Midwest, which had $210 billion in deposits, consists of Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The Southeast, with $201.6 billion in deposits, comprises Alabama, Arkansas, Florida, Georgia, Mississippi, North Carolina, South Carolina, Tennessee, and Virginia.

The West, including Alaska, Arizona, California, Hawaii, Idaho, Montana, Nevada, Oregon, Washington, and Wyoming, reported $261.6 billion in deposits. The southwestern region, with $65.4 billion in deposits, consists of Colorado, Louisiana, Oklahoma, Utah, New Mexico, and Texas.

The New England region, with $91.3 billion in deposits, encompasses Connecticut, Massachusetts, Vermont, Maine, Rhode Island, and New Hampshire. ■

John Steuri of IBM Will Head Systematics Inc.

By DAVID O. TYSON

NEW YORK — Systematics Inc., a major bank facilities management and software firm, announced on Monday it has reached into the upper ranks of International Business Machines Corp. to select a new president and chief executive officer.

He is John E. Steuri, 49, an assistant group executive of the U.S. marketing and services group at IBM. A number of strategic business units making up IBM information services have reported to him in that position. Among them is applications software, which includes banking systems.

Mr. Steuri, who has been with IBM for 24 years, will assume his new duties Oct. 1, succeeding Walter V. Smiley as chief executive officer and Raymond R. Maturi as president. Mr. Smiley, a founder of the company, will remain in his additional post of chairman. Mr. Maturi will continue in charge of marketing and sales activities as an executive vice presdient.

"Systematics provides a logical, exciting, and complementary extension to my career at IBM," Mr. Steuri said in the announcement.

"I am confident we can and will build successfully on the solid customer base Systematics has established in its 20 years of operation."

Systematics is based in Little Rock, Ark. At its annual meeting there Sept. 22, shareholders will be asked to increase the board of directors to seven members and to name Mr. Steuri as the new member.

In a supplement to the proxy statement, Systematics said that it expects to sign an employment agreement giving Mr. Steuri an annual salary of $300,000, a cash bonus up to 20% depending on revenue and profit growth, options on 400,000 common shares, a $5 million, 10-year decreasing term life insurance policy, disability insurance, and severance pay of a year's salary if he is terminated involuntarily in the next two years.

> 'Systematics provides a logical, exciting, and complementary extension to my career at IBM.'
> — John E. Steuri
> Incoming CEO,
> Systematics Inc.

A native of Kansas, Mr. Steuri was graduated from the University of Kansas in 1961 with a BS degree in business administration. He worked for Southwestern Bell Telephone Co. for three years before joining IBM in 1964 as a sales representative in Topeka.

He moved up through a number of marketing management and executive positions, including vice president of marketing operations, where he directed a field marketing force of 9,000 people responsible for more than $6 billion in annual sales.

In his last post, as head of IBM information services, Mr. Steuri has had management responsibility for units with more than $750 million annual revenues and about 5,800 employees. These activities included a worldwide value-added data network, packaged application software and tools, systems integration and professional services, custom workstations, and complementary products.

Systematics had revenues of $179 million in its fiscal year ended May 31. Of that, $139 million came from data processing services, most of it from its 63 facilities management contracts with financial institutions.

The company writes its own software used on the IBM mainframes in those data centers and licenses the software to banks and thrifts that want to do their processing in-house. Such software sales brought in nearly $20 million in the latest fiscal year. Commissions and royalties on the sale of IBM equipment accounted for more than $20 million. ■

White Knight Drops Its Bid for Irving

Italian Bank Balks at Requirements Set by Federal Reserve

▸ Continued from Page 1

European officials did not at first comprehend the conditions being imposed by the Fed or the restrictions on bank holding companies in this country.

The Fed, which had not previously applied the law to a bank controlled by a foreign government, set a series of requirements for temporarily exempting IRI from the holding company act's ban against ownership of both banks and commercial and industrial companies by the same parent firm.

The most serious condition the Fed outlined was about capital adequacy. The central bank said it would require Irving to raise and maintain its capital position "to a level that is at least as strong as the average for domestic banking organizations of comparable size."

Because Irving and most other money center banks on average have lower capital levels than other banks, the provision was likely to be a costly one for IRI and Banca Commerciale. Banking analysts and other observers guessed that this would add $400 million to $450 million in addition to the estimated $750 million cost of the deal.

The next developments in the long-running Bank of New York-Irving saga had not been scheduled until next week. On Sept. 9, a state appeals court is set to hear arguments about parts of Irving's "poison pill" shareholder rights purchase plan that a lower court has invalidated.

Approval to Expire Sept. 7

Meanwhile, Bank of New York's own approval from the Fed, which has been extended twice during the protracted struggle, is scheduled to expire Sept. 7. It has applied for a 90-day extension, and chances for obtaining it were probably enhanced by BCI's departure on Monday.

"I can't believe Irving has any defense from Bank of New York now," said Lawrence Cohn, a bank analyst at Drexel Burnham Lambert Inc.

But Mr. Cohn, like other analysts, said he is hesitant to predict that the 11-month-old takeover battle is over. "I think it's over, but it comes down to whether Irving management is willing to come to terms with Bank of New York."

James J. McDermott, chief analyst for Keefe, Bruyette & Woods Inc., the New York firm specializing in bank stocks, said, "One would hope that Irving has the sense to try to work out a deal with Bank of New York."

Bank of New York is currently offering 1.575 shares of its stock and $15 cash for Irving, or the equivalent of $71.70 per Irving share at Friday's closing prices. Bank of New York's stock closed Friday at $36, and Irving's ended at $67.25 on the New York Stock Exchange.

In a statement Monday, from its headquarters in Milan, BCI said that "as a matter of Italian law, IRI is a government instrumentality and not a company, and therefore it would be inappropriate for it to file with the Federal Reserve."

"BCI regrets that Irving and its shareholders will not be able to participate in what both banks considered to be a mutually beneficial transaction to create a strong and soundly financed competitor within the international banking environment of the 1990s and beyond."

In its letter on Aug. 19, the Fed said it would be willing to grant IRI an exemption for three years from the Bank Holding Company Act restrictions against mixing banking and commerce. In the meanwhile, it said, Congress would have the opportunity to review the case.

Considerations for Exemption

Besides the capital requirements, the Fed set several other conditions on granting an exemption to IRI. They were:

- No extension of credit by Irving or its subsidiaries to any subsidiary of IRI, except in the normal course of correspondent relationships.
- No interlocking relationships of officers, directors, or employees of any IRI subsidiary, except BCI.
- No cross-marketing by Irving of any products or services offered by IRI subsidiaries that would violate the holding company act. No marketing of Irving services by nonbanking subsidiaries of IRI.
- Continued Fed membership of Irving and continued compliance with the restrictions on securities activities under the Glass-Steagall Act. ■

FDIC May Revoke California Bank's Insurance

By ROBERT LUKE
West Coast Bureau

LOS ANGELES — The Federal Deposit Insurance Corp. will conduct a hearing in early October to determine whether it should revoke the troubled Merchant Bank of California's deposit insurance.

The disclosure was made by the bank last Friday.

The Beverly Hills-based Merchant Bank, with assets of about $70 million, said it plans to defend itself vigorously.

Last September, the FDIC ordered the bank to raise at least $3 million in new capital by January 1988.

So far, it has been unable to do so. It has also had no success in finding an acquirer that has "sufficient strength so that the capital structure of the combined entity would be satisfactory to the FDIC," the bank said.

The Bank of Beverly Hills last September agreed in principle to acquire Merchant Bank in an exchange of stock. But in February of this year, the Bank of Beverly Hills terminated the discussions.

> Last September, Merchant Bank was ordered to raise at least $3 million in new capital.

No reasons were given at the time.

Merchant Bank currently has $1.8 million in equity capital and $2.4 million in primary capital, said Lawrence A. Cox Jr., chairman.

The bank on Friday reported profits of $203,601 during the six months ended June 30. The results included a nonrecurring gain of $158,871 from the sale of its partly owned Media Funding Corp. subsidiary, which makes loans to borrowers in the entertainment industry. The bank earned $11,751 during the comparable period a year earlier.

The bank's principal stockholder is the FKW Trust, which was established by several partners in the law firm of Finley, Kumble, Wagner, Heine, Underberg, Manley, Myerson & Casey. The law firm, which at one time was one of the nation's largest, is currently in Chapter 11 bankruptcy proceedings. ■

ive of the corporate restructuring trend; it's been an important new business for them," he said. "But LBO loans have not been tested by a recession — that's when we'll find out how good those loans are, and how far the notion of 'service' extends. Are bankers going to refinance, or will they throw those LBOs into bankruptcy? The answer is going to define service in a new way."

Next: Corporations have helped their banks market direct payroll deposit to employees, while other electronic funds transfer services offered by banks continue to struggle.

AN AMERICAN BANKER SURVEY

Service Counts Most with Corporate Clients

▶ Continued from Page 1

ence for banks that emphasize service rather than price. "Experience shows that if we shopped for cheaper prices we might not get the whole package," said the treasurer of an Ohio-based public utility.

Another borrower, John Slater, executive vice president for Buschman Co., Cincinnati, said that price savings generally do not amount to much.

"The rates aren't that much different [from bank to bank]," he said. "A quarter point is not that big if it means a quality relationship. It's more important for you to feel at ease, to feel comfortable."

Bankers Say Price Is an Issue

But bankers and analysts believe that price remains a persuasive issue to borrowers.

"There's a lot of mixed signals the borrower is giving to bankers," said Christopher L. Snyder, president of Loan Pricing Corp., New York. "When times are good, they push for the lowest possible prices. But when credit gets tight, they want the bank to stand by them. They're like the atheist in a foxhole — suddenly, they find religion."

The desire for that kind of reliance and responsiveness emerged as a major theme of the study. "If we need something, they have to be right there," said one New Jersey-based manufacturer.

"I hear that all the time," said Robert D. Spencer, executive vice president in charge of middle-market lending at Philadelphia National Bank. "The tempo of business today is such that they don't want to wait. In the '50s and '60s, you said, 'Our committee meets next week and you'll hear from us a couple days after that.' Now I'm amazed at how fast things have to go; it's reached a fever pitch."

A problem can arise for bankers, said William Edison, president of Union Bank & Trust Co., Manhattan, Kan., if the borrower's definition of service is unreasonable.

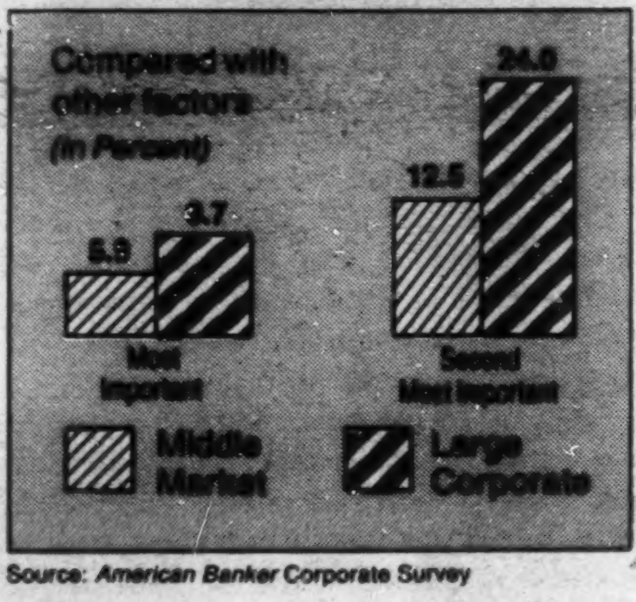
"They want to pick up the phone and hear, 'Yes,'" he said. "To me, that's not good service."

Mr. Edison will head a commercial lending panel this fall for Robert Morris Associates, Philadelphia, the national association of bank loan and credit officers. He told the story of a Japanese bank that was making a $10 million loan to a company in his region.

"They sent in two loan analysts for 90 days," Mr. Edison said. "The joke in the company got to be, 'If you want to know our business, call the bank.' Now that's the definition of good service. If a company says, 'How come I don't have a free pen here?' I guess they don't want the $10 million that bad. Because great service means knowing the company's business."

Survey respondents, however, placed little importance on a bank knowing their business (5.3%). Many firms, Mr. Snyder said, take the attitude that a bank need only know its own business well, not that of its borrowers.

Pricing's Lack of Importance in a Banking Relationship



Source: *American Banker* Corporate Survey

"They want a bank that's good at basic banking," Mr. Snyder said. "They want good accounting, good bookkeeping, and accurate correction of mistakes when they occur."

Beyond that, he said, "they want good communication, a justification for pricing, and — especially in the middle market — they expect the bank to stick with them through thick times and thin."

Banks Must Know Clients

In Mr. Edison's view, a bank can provide that kind of service only if it knows the company well.

"The customer is always going to think they're doing great, that everything's fine," he said. "They expect the banker to see this mystically.

"So when they talk about poor service, they usually mean that you're unreasonably cautious, that you couldn't respond to something they personally requested. But if you can't give them an answer, it's because you don't know them well enough."

Among the few respondents who agreed with that premise, the controller for a Chicago-based export firm said: "We deal with big banks and big dollars; we have large transactions. But we feel safe because the banks know our business."

Mr. Spencer agreed. "I always hear treasurers say, 'That bank never bothered to learn our business.' But I suspect that sometimes the story is you know their business until you turn them down. Then you don't know their business."

If bankers do not know a customer well, Mr. Snyder said, it may be because they spend less time on analysis than on selling.

"The problem banks have had is that their basic business is pretty boring," he said. "So with deregulation, you've got all these corporate lenders looking to investment banking as something more exciting. Meanwhile they're losing track of the nuts and bolts while they learn these new skills."

Mr. Slater said he finds that bank service has slipped a bit. At Buschman, a heavy manufacturer, he finds "they're charging more for the service, but I don't see any improvement. If anything, they're becoming more impersonal."

But as a former banker himself, Mr. Slater said he could sympathize with the lender's plight. "Their customers are a lot less loyal. You've got situations where the bank has stuck with a company through a lot of problems and then the company takes a walk. It's totally uncalled for."

The salience of service showed itself in other areas of the survey as well:

- Service was important to companies regardless of their size; 31% of large companies cited quality of service as most important, compared with 27.3% of middle-market firms.
- An overwhelming majority of respondents said the best way for bankers to attract their business was through some form of service: personal contact, 43.1%; better service or rates, 21.1%; and more innovative ideas, products, or services, 13.1%.

Large companies were particularly interested in innovations, as 19.7% said it would be a good business lure, compared with only 6.3% for middle-market companies.

Easy Credit Not an Attraction

Few companies found easy credit to be a strong attraction. In fact, companies were more likely to say they had no interest in another bank, 6.3%, than to be lured by easy credit, 1.9%.

- Of the companies that changed lead banks in the past two years, most cited poor service as their rationale. Middle-market companies were particularly sensitive in this area — a third cited poor service in general as their reason for changing, and another 33% said the bank was not responsive to the company's needs. The most frequent reason cited by large companies was that credit was limited or refused (29.4%).
- When asked what would threaten an existing relationship, companies again cited poor service. Nearly 29% of those surveyed said poor service would prompt them to change lead banks, while another 15.5% said they would switch if the bank were not responsive to their needs.

Large companies showed a greater sensitivity to fees, with 14.7% saying high fees would cause friction as opposed to 7.6% of the middle-market companies. Middle-market companies felt more strongly about low interest rates on their deposits; 17.3% said low rates would threaten their relationship, while only 7.4% of the large firms considered rates to be a factor.

To the banking industry's credit, more than 14% of the respondents said nothing would threaten their lead relationship.

One eventuality that could threaten a relationship, however, is a recession. Mr. Snyder predicted that an economic downturn will test a bank's commitment to its customers — particularly those for which it financed leveraged buyouts.

"Bankers have been pretty support-

Please see SURVEY: Page 47 ▶

How the Survey Was Conducted

The first *American Banker* Corporate America Survey is based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms.

Trans Data Corp., a research affiliate of the *American Banker*, developed the survey questionnaire in collaboration with the newspaper's editors and reporters. Trans Data, Salisbury, Md., conducted the interviews, tabulated the responses, and assisted in the preliminary analysis for the survey.

The interviews were conducted in March and April with executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more. Within those two groups, companies were randomly selected from a universe of 80,531 middle-market companies and 3,010 large corporations.

The sample has a margin of error of plus or minus five percentage points with a 90% confidence level. That means if 60% of the companies give a response, there is a 90% probability that the actual percentage is between 55% and 65%. This margin of error applies to the total sample. Subgroups with smaller sample sizes have greater margins of error.

California Banker Charged in Check Kiting Plan

By **ROBERT LUKE**
West Coast Bureau

LOS ANGELES — Banker Richard T. Quigley apparently went to great lengths to keep a customer at First Valley Bank in Lompoc, Calif.

So much so that federal prosecutors say that in 1983 he helped engineer a check kiting scheme that nearly cost the bank about $3.25 million. Mr. Quigley was president of the bank.

Last week a federal grand jury here indicted him on one count of conspiracy to misapply bank funds, seven counts of misapplication of bank funds, and eight counts of making false entries in bank books and records.

Federal prosecutors claim Mr. Quigley advanced money to Pea Soup Anderson's Inc., a restaurant-motel chain, knowing that checks deposited into the firm's accounts at the bank were backed by insufficient funds.

Prosecutors also allege that the 57-year-old Mr. Quigley falsified bank records to conceal the kiting.

Also indicted as accomplices on all 16 counts are: Timothy J. O'Healy, 41, of Moraga, Calif., former president of Anderson's; and Glen P. Grant, 35, of Solvang, Calif., former treasurer of the company. Both were alleged to have deposited the checks in the company's accounts to conceal that they were overdrawn.

"Quigley was trying to keep what he perceived to be a good customer," said David C. Scheper, assistant U.S. attorney in Los Angeles. "He didn't pocket any of the money [personally]."

Neither did Mr. O'Healy nor Mr. Grant, Mr. Scheper said.

"They were keeping the [company] going and keeping their salaries and what not," he said.

The indictments were handed up days before the statute of limitations expired. "It took five years to accumulate the evidence," said Mr. Scheper. "Thousands of documents had to be reviewed and analyzed; and hundreds of witnesses had to be interviewed."

None of the defendants could be reached for comment. If convicted on all counts, each faces a maximum of 80 years in prison and an $80,000 fine.

First Valley, with assets of more than $60 million and capital of about $6.4 million, remains profitable. It operates in an area north of Santa Barbara.

Dean Minor, president and chief executive officer, said First Valley has charged off some of the money involved in the alleged scheme. But he declined to specify the amount.

Pea Soup Anderson's Inc., under new management, operates three restaurant-motels in California.

Mr. Minor said Anderson's no longer is a First Valley customer. ■

Did Fed Misread How Milan Bank Would React?

By BART FRAUST

NEWS ANALYSIS

NEW YORK — In deciding to treat Banca Commerciale Italiana's parent as a bank holding company under U.S. law, the Federal Reserve Board was not trying to kill the friendly bidder's deal to buy Irving Bank Corp., according to sources familiar with the Fed's deliberations on Irving.

Rather, the Fed was attempting to chart a middle course in the takeover battle.

But the Fed may have underestimated the importance of the sovereignty issue to Irving's Italian bidder.

"The Fed did not understand that they were dealing with a government entity, not a company," said one lawyer close to the takeover.

Banca Commerciale Italiana this week dropped its friendly bid to acquire 51% of Irving. The Milan bank said the Fed killed the deal by imposing requirements on Istituto per la Ricostruzione Industriale, or IRI, the Italian-government-owned conglomerate that controls Banca Commerciale.

In an interview Tuesday, Fed general counsel Michael Bradfield said he thought the Fed had dealt with the sovereignty issue. "We weren't limiting their overseas activities or even their activities in the U.S.," he said.

Mr. Bradfield said the Fed had offered to meet with representatives of the conglomerate last Thursday, but the Fed received no response from the Italians.

According to one source close to the Italian bank, Banca Commerciale representatives in the U.S. had offered to

Industry Struggles to Meet Deadline for Check Rules

By YVETTE D. KANTROW

TECHNOLOGY TODAY
Section Begins: Page 10

NEW YORK — Thursday is "CC Day" for banks and other financial institutions across the country. The Federal Reserve Board's Regulation CC takes effect, limiting the time that banks can hold checks before making the funds available to depositors.

Reg CC — the legal instrument for enforcing the Expedited Funds Availability Act of 1987 — is the most difficult and confusing piece of regulation to hit banking in years, most people in the industry agree.

But how well and to what extent financial institutions will be able to comply with the enormously detailed, 700-page regulation is a matter of contention. This seems only appropriate for a body of rules that has been hotly debated in recent months.

Bankers have been complaining about its costs and warning that consumers — the purported beneficiaries of the law — will end up paying for it in higher fees.

"I think the word is out now," Stephen Ledford, director of technical research for the Bank Administration Institute in Rolling Meadows, Ill., said of the massive effort by the Fed and trade associations to educate bankers in the fine points of Reg CC.

AN AMERICAN BANKER SURVEY

52% of Firms Use Direct Deposit

By JEFFREY KUTLER
Fifth in a Series

A majority of the nation's largest companies offer to deposit employees' pay automatically into individual workers' bank accounts. And almost half of the employees who have the direct deposit service available take advantage of it.

Corporate America Speaks

These findings, from the *American Banker*'s first Corporate America Survey, suggest that direct deposit has overcome obstacles against which other electronic funds transfer services continue to struggle.

The payroll deposit service has entered the mainstream of bank-corporate relationships, though it is not as central to those relationships as more traditional aspects of commercial banking. In many companies, direct deposit has been accepted by the majority of workers. Such companies may go to great lengths to convince those who resist direct deposit to join the fold.

The survey was conducted in March and April by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper. It is based on interviews of executives at 413 randomly selected companies nationwide, none in the financial services industry. These executives are responsible for choosing the fi-

Rural Bankers Expect Lag in Farm Income

By RICHARD RINGER
Midwest Bureau

CHICAGO — Rural bankers expect the financial condition of their farm borrowers to decline in the third quarter, but an economist at the Federal Reserve Bank of Minneapolis believes the bankers are overly pessimistic.

The bankers' gloomy forecast is based on the effects of this summer's drought, the worst in decades. Responding to a regularly conducted survey, the bankers said the strong financial gains made by farm borrowers in the second quarter will not continue in the current quarter.

The midyear survey of rural bankers in the Minneapolis Fed's district, which includes all or part of six upper midwestern states, shows that about half the bankers expect net farm income and farm spending to lag behind year-ago levels in the third quarter.

Bankers expect the drought to restrain farm profits because of a sharp decline in crop yields, higher expenses, and lower government deficiency payments. In the past, government deficiency payments provided farmers with additional funds for crops when their market price was below a set target.

A report on the survey states: "The expected decline in farm income, surveyed bankers say, will likely weaken farmers' financial conditions generally in the third quarter. In this survey, much larger percentages of bankers than last quarter expect farm spending to decline, the pace of farm debt repayment to slow, and the demand for farm debt refinancing to increase in the next three months."

The Minneapolis Fed conducted the survey, to which 183 rural bankers responded, at the end of the second

Delaware Bank Finds Way to 'Export' Card Fees

By A. JOSEPH NEWMAN JR.

PHILADELPHIA — A modest-size player in the bank card business may have found a way around the legal barriers to "exporting" noninterest fees on cards beyond its home state.

Credit Cards

The right of national banks to charge home-state interest rates on credit cards held by users in other states was upheld by the Supreme Court in 1978. The decision, however, does not address noninterest charges for late payment, bad checks, or exceeding credit limits.

Bankers contend that such charges are an integral part of a card's interest rate. Several states have filed suits claiming that these charges violate consumer protection laws.

To settle a suit brought by the State of Iowa, First National Bank of Wilmington, Del., agreed in April to drop the fees that were in dispute — without admitting wrongdoing or making refunds. The bank is owned by Commercial Credit Co., New York.

Since the settlement, the Delaware bank has instituted two rates, one for creditworthy customers, another much higher rate for poor credit risks. The bank's Tier 1 credit card customers, in good standing, are charged prime plus 7.4 percentage points, with no annual fee.

Tier 2 interest rate is an additional 7.2 percentage points above the Tier 1 rate. Customers are subject to this higher rate if one of three interest rate adjustment events tarnishes their account history: an account past due more than 40 days, an account over the limit by more than 3% that is not paid within 15 days of request, or an account over the limit by any amount that is past due more than 30 days.

Such accounts are also closed. The bank retains sole discretion about reopening an account at the customer's request.

Plate charges and over-limit charges have been abolished. The bad-check charge of $25 has been reduced to $15, but it is waived or lowered to conform with various state laws.

Mary McDermott, commercial credit spokeswoman at the First National Bank of Wilmington, said the bank continues to believe that less creditworthy customers should pay higher rates because they are more costly to the bank.

She described the two-tier interest rate as "a new procedure, but not a new policy."

Richard Cleland, head of Iowa's Consumer Protection Division in Des Moines, said he is "not crazy about the two-tier

Wells to Lead Bank Financing Of Insilco Deal

By JED HOROWITZ

NEW YORK — Wells Fargo & Co. will lead the bank portion of the $963 million takeover financing of Insilco Corp. by Texas oilmen Cyril Wagner Jr. and Jack E. Brown, sources said.

The deal includes an $812.8 million tender offer and a refinancing of about $150 million of Insilco's $245 million of outstanding debt. It replaces an earlier takeover agreement that was to have been financed in part by a $530 million loan commitment from Chemical Bank.

"We will be using bank debt, but it will be less than Chemical's [commitment]," said Douglas Squires, a managing director at Merrill Lynch & Co., which is advising the Texas oilmen and investing in the deal.

Mr. Squires did not provide details, noting that INR Holdings Inc., the shell company set up to make the acquisition, is filing its offer today for the Meriden, Conn., company. But he said the buyout group does not want to accumulate and amortize much senior bank debt.

"We want to buy this collection of businesses and grow them rather than be forced to sell them to pay back bank debt," he said.

Mr. Wagner and Mr. Brown are apparently taking pains to reverse their reputation as canny raiders who profit but rarely complete a deal — thereby drawing the enmity of target companies forced to restructure in the process of defending themselves.

Insilco, whose widespread businesses include Red Devil paints, Rolodex desktop filers, and Taylor Publishing Co., last week accepted their offer of $31.75 a share. It supersedes a leveraged buyout bid led by First Boston Corp. and Insilco management at $29 a share, or $724 million.

Chemical received about $5.4 million in breakup fees when the earlier deal fizzled, said James Lee, who runs the bank's loan syndication department. The bank was brought into the deal by First Boston, according to an Insilco executive, who asked for anonymity.

Early Allies of Boone Pickens

Wells has historically been principal banker for Mr. Wagner and Mr. Brown, according to a Wall Street source. The Texans, who have large oil and gas holdings and real estate investments, were early investors in several of T. Boone Pickens' deals.

A Wells Fargo spokeswoman would not comment on the bank's role. A bank source confirmed, however, that Wells expects to lead the loan package, which will include a revolving credit and a term loan.

Wells Fargo does not sell its loans on the secondary market, but does syndicate them among other lenders. Market sources said they expect to be offered a piece of the Insilco deal.

Merill Lynch and Wagner Brown have committed to provide the $812.8 million necessary to complete the merger, but expect to have the bank financing in place before they begin buying the shares, Mr. Squires said.

The package will include a $780 million bridge loan that will be refinanced in part with junk bonds, according to *Investment Dealers' Digest*, a weekly trade publication. It said the takeover group hopes to lower Insilco's debt service and attract investors by including $150 million of equity warrants in the junk offering. ■

FINANCIAL TECHNOLOGY UPDATE

First Interstate Bank, of Denver, Colorado, recently installed NCR's 5088 Slimline ATMs. According to Patrick Ruckh, of First Interstate, the security of the NCR Slimline was a major factor in their decision to go with NCR. Since financial and service personnel work *inside* the Slimline's unique housing, they're physically safe, secure and dry. So are the media, electronics, and equipment.

Gem Savings, the fourth largest S & L in Ohio, just installed new NCR 5068 Financial Workstations. More than just PC's, these terminals communicate, process transactions, and fully automate the teller and platform. The move is made as part of Gem's on-going commitment to customer service.

Louis F. Bein, president of The Berthoud National Bank of Berthoud, Colorado, explains how NCR's Banker 80-II account processing system has affected the bank's business. "Detailed customer information is promptly available, making our contact with customers expeditious and efficient." In addition, Banker 80-II has made it possible to provide more customer services. The Customer Profitability and Loan Pricing module will now enable us to analyze profit segments of our business.

Farmers State Bank, of Circleville, Kansas, chose the NCR 7720-3000 On-line Counter-Top Item Processing System as a unique, cost-effective solution to reduce check-processing expenses. The 7720 Intelligent Workstation has enabled Farmers State to reduce correspondent bank charges, and cut labor expenses by minimizing the number of times an item need be handled. The PC based System proves, encodes, endorses, lists, sorts, and captures check data, and communicates to and from a host computer via industry standard protocols.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

COMMENTARY

Treasury 'Accounting' Could Resolve FSLIC Problem

By STAN SILVERBERG

MOST analysts who are familiar with saving and loan associations are convinced that the cost of closing or merging insolvent S&Ls is way beyond the resources that will be available to the Federal Savings and Loan Insurance Corp., assuming no new revenue sources.

Cost estimates keep rising as reported S&L losses and the net worth deficiency of insolvent S&Ls increase. The latter have reported losses of about $18 billion during the five quarters that ended March 31, 1988.

If insolvent S&Ls could be closed or merged in the next year or two, the cost, under the most favorable circumstances would be at least $50 billion and informed analysts recently placed estimates in the $60 billion to $75 billion range. The passage of time will increase the cost of disposing of insolvent S&Ls.

The FSLIC has attempted to conserve its available cash by offering its IOUs (FSLIC notes) to institutions acquiring insolvent S&Ls and by entering into long-term assistance agreements with little cash up front. Those who have accepted FSLIC notes presumably assume that the FSLIC will be bailed out or that the Treasury or the FSLIC's successor will honor the notes.

The FSLIC has also tried to reduce costs by entering into "thin deals" whereby other S&Ls or investors acquire insolvent institutions. Some of these transactions are with marginal S&Ls that might not otherwise survive.

They are willing to take a limited amount of assistance as long as it counts for regulatory capital and assures their survival for several years. In some transactions, forebearances on capital requirements and growth restraints allow institutions or investors to operate with enormous leverage so that the potential for large gains outweigh the risk of loss on a small capital base (most of the risk is assumed by the FSLIC).

Possibility of Future Problems

These arrangements increase the probability that the deal will come back as a future problem with future costs. They also impose a burden on competing institutions that have to meet regulatory standards and promise to make life more difficult for whomever supervises S&Ls in the future.

The FSLIC can also delay dealing with insolvent S&Ls. However, delay is very expensive.

The real (as opposed to reported) net worth deficiency in insolvent S&Ls has to be financed, and the cost of funds and operating expenses in these institutions is very high. Together, they probably amount to at least 11% of liabilities so that financing a $60 billion "hole" costs more than $6 billion annually.

In addition, there is apt to be further asset deterioration resulting from inappropriate incentives for managers of insolvent institutions, problems related to attracting or maintaining quality management, and a deteriorating franchise. While these factors cannot be easily quantified, there is good reason to believe that they will raise future costs considerably.

Keeping insolvent institutions alive keeps the cost of funds high for solvent S&Ls and exposes them to other competition that further reduces margins.

In addition, it makes it difficult for the Federal Home Loan Bank System to pursue the tough, even-handed supervisory policy that is needed and to implement necessary changes in the insurance-supervisory system. Thus, there is a very strong case for closing or merging insolvent S&Ls as quickly as possible.

Money Appears to be the Problem

The problem appears to be money. The FSLIC is substantially insolvent. S&Ls are already paying an extremely high assessment premium on their deposits.

Getting additional funds from solvent S&Ls will be extremely difficult and probably self-defeating since it would risk pushing more institutions into insolvency. If Congress chooses to tap some or even all of the Federal Deposit Insurance Corp.'s net worth, that would not provide sufficient resources since most of the FSLIC's "hole" would remain.

> 'Getting additional funds from solvent S&Ls will be extremely difficult and probably self-defeating since it would risk pushing more institutions into insolvency.'
>
> — Stan Silverberg

A large share of the cost of resolving the S&L problem will necessarily have to come from general Treasury funds, and if the problem is to be resolved quickly, most of the funding will have to come from the Treasury (Congress could elect to recapture some of this outlay through future insurance assessments).

A case can be made that government policy — which contributed to wide swings in interest rates, opposed variable rate mortgages, and permitted lax supervision of S&Ls — is far more responsible for today's savings and loan problems than the solvent component of the S&L industry.

A Treasury "outlay" of, say, $50 billion over the next few years might be hard for Congress to swallow. However, as suggested, delay will raise the present value cost in addition to imposing indirect costs on the system.

While we would not want to minimize the importance of what would appear to be so large a budget outlay, it is easy to exaggerate its financial and economic significance. The FSLIC is substantially insolvent. The Competitive Equality in Banking Act of 1987 specifically placed the Treasury behind the FSLIC as a guarantor of FSLIC-insured deposits.

Thus, the Treasury is already on the line to pay the cost, even though, technically, the obligation is not currently acknowledged as Treasury debt. The expectation that the Treasury will eventually have to pay is very likely already built into prevailing Treasury yields. When the funds are obligated and "spent," Treasury debt will increase.

If the Treasury were a private corporation, accountants probably would have required the Treasury to book the indebtedness. At a minimum, analysts would have paid considerable attention to the footnote.

Were it not for existing accounting convention that does not count Financial Corp. borrowing and FSLIC notes as part of the federal debt, about $10 billion of the Treasury cost would have already been "incurred."

It is important to appreciate that, from an economic standpoint, the cost of the S&L and the FSLIC problem (up to today's exposure) has already been incurred.

Projects that were not economically viable have already been built or partially built. Interest payments in excess of income have already been made, private planes have already been bought and flown, etc.

When the Treasury pays the bill there will be no significant purchase or bidding for economic resources. The money will facilitate closing and merging insolvent S&Ls. While some jobs will be lost and some new ones created, the magnitude of these economic effects will be in the millions of dollars — not in billions.

Current depositors or other creditors will be no richer or no more liquid through the process. Depositors know their claims are good whether the Treasury chooses to back them now or in the future.

Some churning will occur in financial markets. Some high cost deposits will disappear and some portfolios will be adjusted to take additional Treasury obligations. However, it is not even obvious whether the net financial market impact of all this ought to be higher or lower interest rates (clearly it will result in lower deposit costs vis-a-vis Treasury yields).

Unless taxes or expenditures are otherwise affected, there would be no basic change in the demand for real resources (apart from a net reduction in jobs and excess facilities associated with closing or merging failing S&Ls). If Congress sought to raise tax receipts or lower expenditures to "offset" the cost, the impact of this clearly would be deflationary. Congress is not likely to do this.

The only unambiguous result of the Treasury outlay will be a rise in the government's debt. But the interest payments on this additional Treasury debt will be substantially less than the growth rate of the Treasury's obligation in connection with the FSLIC. Thus, paying the bill sooner will ultimately result in less cost and less government debt.

To reiterate, most of the costs of current S&L insolvencies have already been incurred. The process by which the Treasury pays largely involves accounting.

No real resources will be purchased by the Treasury and no significant transfer payments will be made. This is not to say that there won't be substantial financial and real benefits from resolving the S&L problem.

It is important that Congress appreciate that the "budgetary outlay" to pay the cost would not be like other outlays. Resources won't be drawn away from defense or education. Transfers won't be made to dishonest or incompetent S&L executives. We are basically talking about some accounting adjustments, and they should be treated as such. ■

Mr. Silverberg, formerly director of research and strategic planning at the FDIC, is now special consultant to Golembe Associates.

BRIEF COMMENTARY

Good News from the Competition?

The following item appeared in the June 1988 edition of Massachusetts Banker, a publication of the Massachusetts Bankers Association.

□

IT'S great news," said the bank chief executive officer. What news? That the American Association of Retired People has just launched its new credit union.

Drawing on an AARP membership of 28 million, it could easily — and quickly — become the largest in the country, out-ranking even the 825,000-member Navy Federal Credit Union.

Why such an enthusiastic response from a banker? Because in his view the AARP credit union promises to be such a formidable competitor that many banks which have ignored the credit union challenge will be prodded into action. Credit unions can expect a lot more attention going to their tax-exempt status and capital requirements, thanks to AARP.

"It had to get worse before it could get better," the CEO said of the competitive inequality that has so favored credit unions and troubled community bankers. "And this is definitely worse!" ■

AN AMERICAN BANKER SURVEY

Employees Encouraged to Bank at Workplace

By JEFFREY KUTLER
Part of a Series

Whether the intention is to boost employees' morale or keep them close to the office on paydays, about one corporation in three would encourage its workers to bank on the premises, according to the first *American Banker* Corporate America Survey.

Corporate
America
Speaks

That finding points to a cross-selling opportunity for banks. Consumer banking conveniences such as check cashing, automated teller machines, and even full-service branches at the workplace are potential additions to the traditional commercial banking relationship.

The survey was conducted in March and April by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper. It is based on interviews of executives at 413 randomly selected companies nationwide, none in the financial services industry. These executives are responsible for choosing the financial services and institutions their companies use.

The survey shows that 29% of companies with at least $10 million in annual sales would allow a mobile bank on their grounds or in their office space.

A slightly larger group, 32%, say they either have ATMs accessible to employees or would be willing to provide such access.

These findings show that a sizable minority of companies would play a role in helping banks serve employees. If banks can exploit such opportunities — as a few are trying to do — they might make inroads in an employee-benefits market that insurance companies have long dominated.

Automatic payroll deposit is available at 52% of all companies in the survey and 73% of those with more than $250 million in annual sales. Providing this service may give banks an opening for a variety of retail services delivered through the workplace.

Favorable Views of Mobile Branch

One question in the survey presupposed a mobile facility such as the "Banking a la Carte" staffed kiosk that Chemical Bank provides at business offices in the New York area. Trans Data Corp. obtained consistent reactions to mobile facilities from companies of all sizes.

Of middle-market companies, those with $10 million to $250 million in annual sales, 27% would allow mobile branches. Firms with over $250 million in sales had a 30% favorable response rate. These percentages are equivalent given the statistical margin of error (plus or minus 5% for this part of the sample, and higher for smaller segments of the sample).

The consistency is apparent across industries, with percentages of companies that would admit a mobile bank ranging from 25% in business services to 33% in wholesale and retail trade.

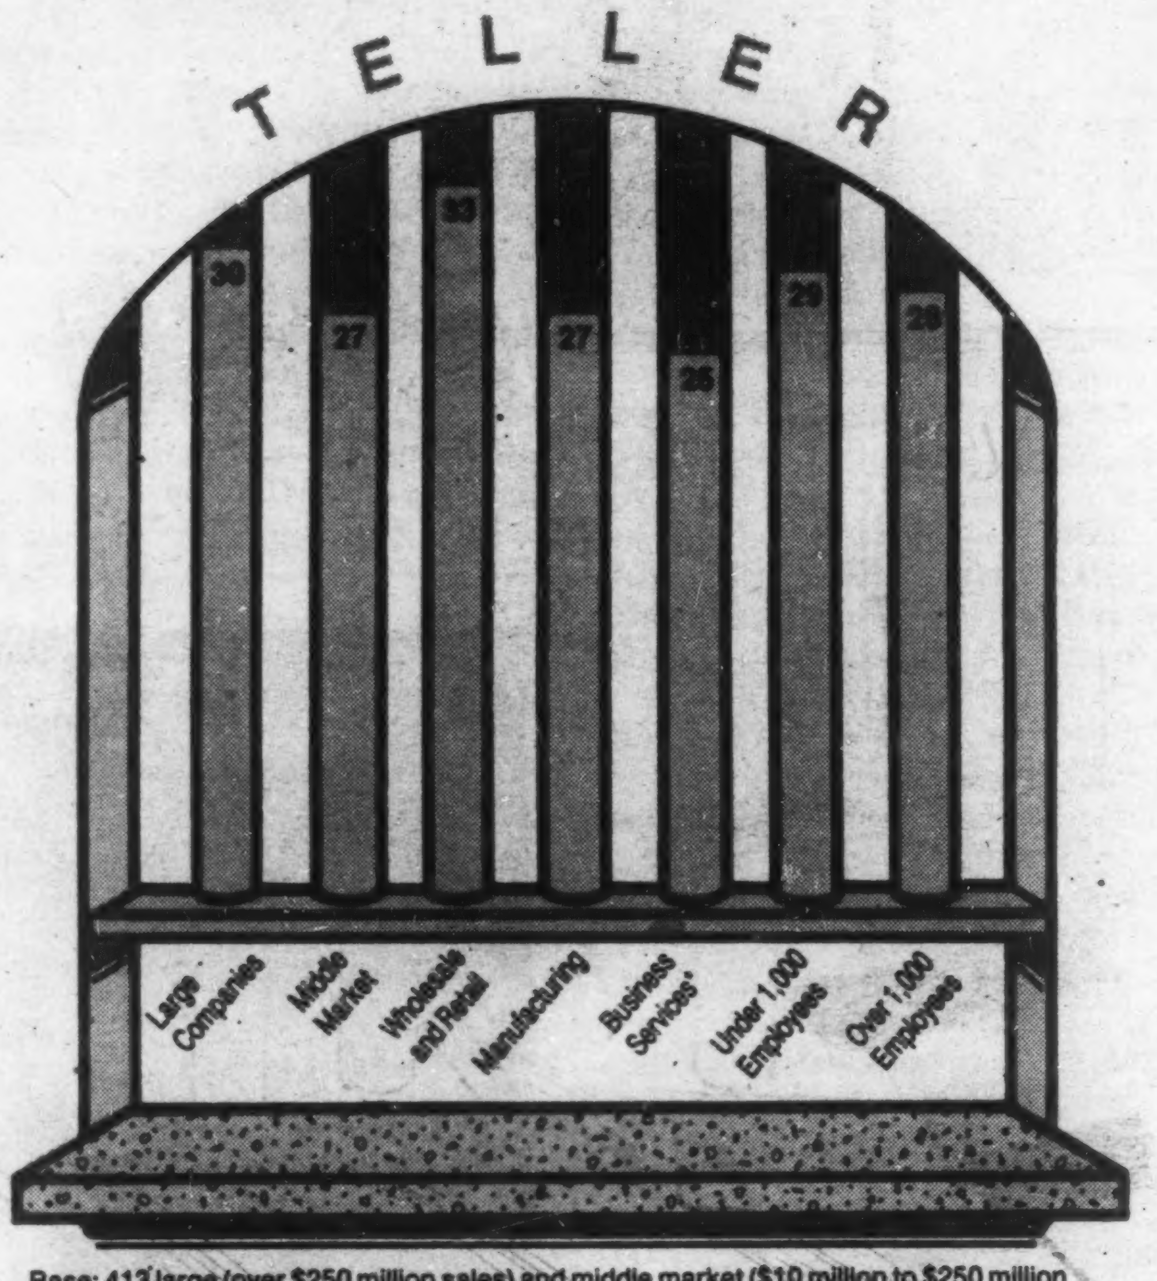
There is no discernible difference between companies employing fewer than 1,000 workers (29%) and more than 1,000 (28%), or between the Snow Belt (Northeast and North Central regions, 30%) and the Sun Belt (South and West, 27%).

There is a slight aberration in the nine northeastern states, from Pennsylvania and New Jersey north to Maine. There, an above-average 35% of 83 respondents said they would allow a mobile bank on their premises. This might be explained by the companies' concern over the time employees need to cash checks at crowded bank branches in the region's cities.

Company executives seem to realize that automated tellers, particularly in tandem with a direct payroll-deposit service, would solve such problems. Employees could get cash from an ATM on payday or any other day.

Banking on Company Premises

Companies that would allow mobile bank branches on their premises to serve employees (percentages of selected market segments)



Base: 413 large (over $250 million sales) and middle market ($10 million to $250 million sales) companies.
*With only 56 respondents in this group, percentage is less statistically reliable than in other segments.
Source: *American Banker* Corporate Survey

17% Have ATMs Available

Seventeen percent of all companies surveyed have ATMs on their premises for employee use. The percentage presumably includes firms in office buildings or office parks with one or more centrally located ATMs.

About 15% of companies say they don't have ATMs on the premises but would be interested in providing them, bringing the total positive response to 32%.

The largest companies are the most in favor of the idea: 26% of those with more than $250 million in sales have ATMs available, and 19% are interested in providing the service.

Only 7% of middle-market companies have ATMs available, with 11% expressing interest. A similar response came from firms with fewer than 1,000 employees: 9% report ATMs are nearby and 11% would like to have them.

Automated tellers are available at 20% of companies with more than 1,000 employees, while an additional 17% express interest. For companies with more than 10,000 employees, 29% say they have ATMs and 19% say they might add them.

Bankers are indeed placing ATMs at business locations, as part of a continuing effort to install the machines at sites other than bank branches. But ATMs on corporate sites have been less prominent than those at airports, supermarkets, and shopping malls.

Some ATMs — placed in what bankers consider untraditional locations, such as airports and hospitals — serve those facilities' employees as much as they do the general public.

"I don't have exact numbers, but I know more and more ATMs are showing up at the workplace," said Linda Fenner Zimmer, an ATM industry trend-watcher based in Marlborough, Conn.

"It's happening," she said, "but quietly. In some cases, a company will ask for an ATM as part of its banking relationship. A bank might work out an arrangement in which the corporation owns or subsidizes the machine."

Several major institutions marketing bank-at-work services have had to resolve such tactical questions as what sites have enough people to justify an ATM or minibranch, how much to charge for it, and which bank department is responsible for the service.

Banks got into the bank-at-work business as an extension of their commercial relationships. For some, the desire to have a presence at corporate sites predated the advent of self-service banking machines.

ATMs are not an important element in Bank-at-Work, First National Bank of Chicago's program, primarily because the Chicago bank has been in that business since 1969, when ATMs were not widespread. Built around the payroll function, Bank-at-Work is offered to Chicago-area companies of virtually any size, from 5 to 5,000 employees, a bank spokesman said.

Although it markets the direct-deposit service to companies, the bank hopes the employees will sign up for a package of banking services at a discount price. Only within the past year and a half has First Chicago installed its first two ATMs in the workplace.

At Chemical Bank the marketing slogan explains the strategy: "Better banking for your employees. Better benefits for your organization."

The New York bank developed its workplace service in the early 1980s and created a separate division for it in 1983. ATMs are one aspect of a range of services from basic check cashing to a consumer account package offered to employees at "group rates." The latter might include free checking and a no-fee credit card.

"The Chemical Bank at Work program is meeting a good deal of success, but interest in ATMs tends to fall off when you get into a discussion of the economics," said David Mooney, senior vice president in Chemical's consumer banking group. More interest has been generated by the fully equipped "Banking a la Carte," which Chemical moves into corporate locations on paydays.

"Originally, we viewed this as a way to solve check-cashing problems, but now our focus is on serving the customer, be it the consumer or corporation," Mr. Mooney said. "A lot of companies feel strongly about providing no-cost or low-cost banking services to employees, and they feel an obligation about making sure employees can cash checks. They are also very concerned about employee productivity.

"We offer ways to meet those needs at very low cost to the companies and their employees," Mr. Mooney said.

Wells Fargo Bank, San Francisco, regards its eight-year-old workplace banking program, called Expresservice, as an important adjunct to its branch and ATM networks, which are

Direct Deposit Enters Corporate Mainstream

➤ Continued from Page 1

nancial services and institutions their companies use.

Fifty-two percent of the companies surveyed currently offer direct deposit. An additional 15% of these middle-market and larger organizations say they are interested in providing direct deposit, bringing the potential acceptance rate to 67%.

At the average company now offering the service, 46% of employees receive their paychecks electronically. But one in five corporations has an acceptance rate of 75% or greater.

Big Companies Embrace Concept

A firm's propensity to offer direct deposit and to win employee acceptance grows as company size increases, whether measured by annual sales or by number of workers.

Among the beneficiaries of this trend is the automated clearing house network, which, after years of disappointing its promoters, is now increasing its transaction volume by about 30% a year. This year the network is expected to handle 1.2 billion transactions, or about 2% of checks written annually in the United States.

More than half of clearing house payments will be some form of direct credit into recipients' accounts — primarily Social Security and other government benefits, and government and private-sector payrolls.

Of 2.16 billion salary payments nationwide in 1986, 163 million, or 8%, were direct deposited, according to market research cited by the National Automated Clearing House Association.

The association, an umbrella group for 42 regional associations that promote such paperless payments, has set a goal of generating one billion new electronic credits in the private sector by 1993.

The *American Banker*'s Corporate America Survey shows that the clearing houses are on their way to meeting that target.

"Direct deposit seems to be part of an across-the-board trend that reflects a true corporate acceptance of what we have to offer," said William R. Moroney, president of the Washington-based clearing house group.

Direct Payroll Deposit

How Marion Labs Sold Direct Deposit

When direct deposit is marketed well, the bank's corporate customers play an active role in selling the service. This was the case at Marion Laboratories Inc., Kansas City, Mo., one of the most successful companies at persuading employees to take their pay electronically.

After four years of campaigning, Marion Laboratories is directly depositing paychecks for 85% of its 3,800 employees across the country.

"We marketed it as an employee benefit, a time-saving convenience," said Denise Lynch, disbursements accounting manager for the pharmaceutical firm, which has yearly sales of $750 million. "We never positioned it as something that was a benefit only to the corporation."

Marion got some support from its bank, Boatmen's First National Bank of Kansas City, in the form of brochures, forms, and related materials. But the marketing of direct deposit was very much a company effort.

"We looked at other direct deposit programs and decided that it was best to make it voluntary," Ms. Lynch said. "There is some question about the legality of forcing people to take direct deposit, but I disagree in principle with the idea of making it mandatory. I do support a strong selling job, and that's what we did.

"If you have a good program, it will sell itself," shesaid.

"Often these programs are rolled out with one-way communication, with the company sending letters and expecting employees to react," Ms. Lynch said. "We recognized that people would have a lot of questions about the service, so we set up lines of communication to address their concerns one on one," she said.

The program has won the greatest acceptance — more than 90% — among field sales representatives and salaried home-office workers. Use of the service among hourly and part-time personnel, including many production-line workers, is in the 66% range, but Ms. Lynch hopes to raise that to 75% within a year. She said her ultimate goal is 100% participation.

— Jeffrey Kutler

He said the survey findings confirm his own conclusion that the direct-payment facility is maturing after 15 years of "gestation" that tried the patience of the electronic banking industry.

"A product is usually considered mature when it reaches 50% of its market and then begins to grow very rapidly toward 100%," Mr. Moroney said.

"The period between introduction and 50% penetration is the gestation time. Total automated clearing house volume is still only 2% of checks, but in at least some market segments direct deposit has clearly reached a mature stage.

"It is just time for this to happen," he said. "It makes sense. Corporations are getting over their fetish of playing the float and are concentrating on efficiency in cash management and other aspects of their banking and employee relationships. The ACH has begun to really take off as a result."

Varying Degrees of Success

Mr. Moroney said it was his impression — based on conversations with bankers around the country — that the 46% average acceptance rate by employees obscures the fact that some firms do much better, and others have not done much direct depositing at all.

The Corporate America Survey data bear this out. While 20% of the sample reports acceptance rates above 75%, 24% of the companies are below 25%. Fifteen percent of the firms have failed to make more than one-tenth of their paychecks electronic.

Disparities in direct-deposit performance are especially pronounced when middle-market firms — those with $10 million up to $250 million in annual sales — are compared with larger companies.

Above the $250 million threshold, 73% of corporations already offer direct deposit and report an average 49% employee acceptance rate.

Another 14% of these larger firms express an interest in offering the service. That adds up to a potential large-corporate penetration of 87%, 20 percentage points higher than for the entire group surveyed.

The aggregate figures are depressed by the middle-market segment, in which only 30% of companies currently offer direct deposit and another 16% express interest. Fully 29% of middle-market firms offering the service report acceptance by 10% or fewer employees. This compares to only 9% of the large companies reporting low acceptance rates.

Availability of direct deposit also correlates with the number of employees at a company. In the middle-market group, the service is offered by 23% of companies with fewer than 1,000 employees and by 37% of those with more than 1,000 employees.

At the larger organizations, $250 million-and-over, direct deposit is available from 57% of the relatively few companies in the survey with under 10,000 employees, and from 78% of the rest.

There are no major statistical variations among industries in their response to direct deposit offerings, but there is a geographical difference. Companies in the Northeast and Midwest are almost 50% more likely than those in the South and West to offer direct deposit. Where 60% of Northeast and Midwest firms provide the service, only 44% offer it in the rest of the country.

The proportion of firms in the South and West not interested in direct deposit — 38% — is significantly higher than the 24% of companies rejecting the idea in the northern regions.

How the Survey Was Conducted

The first *American Banker* Corporate America Survey is based on telephone interviews with executives of 413 randomly selected companies, none of which are financial services firms.

Trans Data Corp., a research affiliate of the *American Banker*, developed the survey questionnaire in collaboration with the newspaper's editors and reporters. Trans Data, Salisbury, Md., conducted the interviews, tabulated the responses, and assisted in the preliminary analysis for the survey.

The interviews were conducted in March and April with executives responsible for choosing the financial services and institutions their companies use.

The survey was divided into two groups: a middle-market sample of 205 companies with revenues between $10 million and $250 million, and a large-corporation sample of 208 companies with annual revenues of $250 million or more. Within those two groups, companies were randomly selected from a universe of 80,531 middle-market companies and 3,010 large corporations.

The sample has a margin of error of plus or minus five percentage points with a 90% confidence level. That means if 60% of the companies give a response, there is a 90% probability that the actual percentage is between 55% and 65%. This margin of error applies to the total sample. Subgroups with smaller sample sizes have greater margins of error.

These variations say more about where large companies and their banks are based than about any inherent differences in geography. While a decision to offer direct deposit may be made at corporate headquarters, the payments can be received anywhere via the automated clearing house.

Strong Growth in Midwest

Some of the most aggressive direct deposit promotions have taken place in the Midwest, coordinated by regional automated clearing house associations.

In the six states served by Mid-America Payment Exchange, an Omaha-based clearing house, the number of companies participating in the direct deposit program doubled to 1,857 in 1987. Two-thirds of the companies using automated clearing house services in that region were using direct deposits, and they accounted for 12% of private-sector transactions.

Much of the region's direct deposit growth was the result of banks signing smaller companies, according to an analysis published by Mid-America. This is happening nationwide as bank marketers focus more on middle-market and smaller companies.

"There really is no business too small to pay its employees electronically," said William Nelson, a member of the national association's staff who formerly sold automated clearing house services for Mellon Bank, Pittsburgh.

"Some companies have literally one person on direct deposit. The payments can be entered into the ACH easily by many of the payroll-service companies on a turnkey basis, or directly by the companies using

personal computers," Mr. Nelson said.

"Large companies with big numbers of payments gain efficiencies and save money by paying their employees directly," Mr. Moroney said. "The smaller firms may not be able to identify benefits in terms of cost savings, but they would certainly be attracted by the convenience of direct deposit."

Although the opportunities to sell direct deposit are greatest at companies doing less than $250 million in annual sales, the large-corporation market should not be neglected, said John F. Good, executive director of Mid-America. The clearing house, based in Cleveland, serves northern Ohio.

Mr. Good, a tireless promoter of direct deposit both in and out of his region, said many bankers have targeted smaller companies without realizing that some very large direct deposit accounts have yet to be won at big companies. As examples he cited two *Fortune* 1000 companies — Marriott Corp. and United Air Lines Inc. — which have 250,000 employees between them and make little if any use of direct deposit.

Banks Need to Knock on Doors

"There is a tremendous market left for this service, and it's not just in the middle market," he said. "I don't think the banks are doing as good a job as they can in marketing it."

Mr. Good suggests to banks in his area that they complement their corporate calling efforts, with what he calls "receive side" marketing. Conventional calling focuses on signing companies to originate direct deposits and other electronic payments. He said he would like to see banks market direct deposit to potential recipients of the payments.

"Every week, financial institutions can look at ACH reports that list all originating companies," Mr. Good said. "Banks can identify customers who are not receiving salary deposits from those companies, and market the service to them directly. There is a whole marketing opportunity on the receive side."

The National Automated Clearing House Association is also exploring the receive side.

"We are looking to create a mechanism that would allow consumers who work for certain employers to sign up for direct deposit at their banks, perhaps even when they open an account," Mr. Moroney said. "The answer may be a directory that lists the companies that offer direct deposit."

The national association, meanwhile, is preparing to spend $3 million to $5 million on what would be the first coordinated, nationwide campaign to promote direct deposit. Some of the money might be spent on media advertising, the rest on brochures and materials that financial institutions could use locally.

"Maybe we will be lighting the afterburners on something that has already begun to take off," Mr. Moroney said when apprised of the *American Banker* survey results. ■

Next: Commercial bankers seem to be shortchanging their middle-market clients on personal service. Another article in this corporate survey series appears today on page 14.

Employees Encouraged to Do Their Banking Where They Work

➤ Continued from Page 14

among the most extensive in the nation.

The bank has put minibranches at 31 corporate sites in California, said Lisa Worthington, a bank spokeswoman. A customer service representative who opens accounts, sells services, answers questions — but does not handle cash — is present during normal business hours. Cash dispensing and other teller functions are handled by a nearby ATM, which operates at all hours.

Wells Fargo will install Expresservice facilities only at work sites with more than 1,100 people, Ms. Worthington said. Participants in the program include the computer maker Hewlett-Packard Co., several hospitals and medical centers, and the *San Jose Mercury News*.

At Norwest Corp., Minneapolis, assistant vice president Bill Brewer never bought the assumption that corporations might welcome minibranches as an employee convenience, but would not pay for ATMs.

Convinced that ATMs are the most efficient alternative for corporate locations with at least 1,500 workers or passersby, Mr. Brewer offers deals that many large companies in his area have found difficult to pass up. He is actually selling them ATMs.

Like many bank-at-work marketers, Mr. Brewer is reluctant to give the names of companies that have bought ATMs and related support services from Norwest Bank. He did say, however, that they include a large insurance company, a car rental firm, and several manufacturing plants with work forces numbering in the thousands.

The machines are connected to Instant Cash, Norwest's multistate ATM network. The corporations that own the machines receive transaction fees, as would any member bank.

"We put a business case in front of the corporation," Mr. Brewer said, explaining his approach. "We present to them the idea of ownership. We point out that they can generate income from the transactions, and this helps them justify the cost."

Mr. Brewer said Norwest has been marketing workplace ATMs since 1977, when Minnesota law was changed to allow ATM installations away from bank premises. Marketing has intensified in the past few years as ATM prices have fallen. A number of used ATMs, which cost less than new ones and are adequate to the traffic volumes at many corporate locations, have also come on the market.

"I don't think we've had one failure over the years," Mr. Brewer said. "The biggest lesson is that you do not have to give the service away. A corporation can own the machine and profit from it, and it is a service that solidifies the banking relationship."

The willingness of Mr. Brewer's customers to pay is an exception to the rule, said Robert Barone, president of Diebold Inc., Canton, Ohio. Diebold is the nation's leading ATM manufacturer. For cost reasons, corporations rarely insist that banks bring ATMs on-site, he said. Eastman Kodak Co. is a rare corporate customer, he said, in that it took such an initiative with Chase Lincoln First Bank of Rochester, N.Y.

"Corporations may willingly pay fees, but, typically, banks push ATM placements as part of a direct payroll-deposit package," Mr. Barone said.

"If corporations had to pay for the ATMs, I don't think the idea would fly," he said. "All they see are soft, hard-to-quantify benefits like time saved or convenience."

Mr. Brewer said attitudes can change if bankers approach the bank-at-work market in a more purposeful, organized way. At most banks, retail and corporate departments remain uncoordinated. Few have groups assigned specifically to selling workplace services.

"In the best of all worlds, we as bankers should be selling payroll, automated clearing house, cash management, lending, and employee banking services to our corporate clients all at once," Mr. Brewer said. ■

Wilmington Bank Develops Strategy To 'Export' Fees

▸ Continued from Page 2

system from a consumer-protection point of view." But, he conceded, "It does not violate any Iowa law."

Iowa also has fee-export suits pending against Citibank (South Dakota), Sioux Falls, a unit of New York's Citicorp, and several units of United Missouri Bancshares Inc., Kansas City.

The Wilmington bank's new rate structure "does not signal a trend" in the card industry, according to Alan S. Kaplinsky, a Philadelphia attorney who heads the American Bar Association committee on consumer financial services.

"It's a very clever way to try to overcome the problem," Mr. Kaplinsky said, but it is "not a sure-fire way to eliminate it." The additional 7.2 percentage points, Mr. Kaplinsky said, "is really a delinquency charge."

Mr. Kaplinsky noted that the addition of 7.2 percentage points to the first-tier rate of prime plus 7.4 percentage points could be characterized as "unconscionable," especially in relation to the actual cost of handling or closing over-limit and past-due accounts. With the prime currently at 10%, cardholders in Tier 2 are paying 24.6%.

The contention that such rates are unconscionable appeared in a 1987 class-action suit against Crocker National Bank, San Francisco. Attorney Paul Purdue sued over a $6 bad-check fee, claiming it cost the bank only 50 cents to process the paperwork.

Wells Fargo Bank, which acquired Crocker, settled the suit and agreed to make refunds.

First National Bank of Wilmington had $294,474,000 in credit card and related loans outstanding at the end of 1986, ranking it No. 58 nationally, according to the *American Banker*'s September 1987 tabulation. ■

Lobbyists . . .

▸ Continued from Page 3

lon, Morgan Guaranty, NCNB, Norwest, Pittsburgh National, and Security Pacific.

Noticeably absent from the Bankers Trust coalition are Citicorp and Bank of America. Both are said to be opposed to legislation this year, in no small part because restrictions on insurance activities are included in both the House legislation and a separate bill passed by the Senate.

Thus, the nation's very largest and very smallest banks are opposed to the bill. The Independent Bankers Association of America, which represents community banks, would prefer not to have legislation this year, said lobbyist Stephen Verdier.

Driving the Bankers Trust group is a feeling that the industry is closer this year than ever before to gaining entry into investment banking. Concern is mounting that the opportunity at hand may disappear next year, when leadership on the Senate Banking Committee changes and Congress begins work on the crisis in the thrift industry.

"A very significant portion of the industry believes a bill is needed this year," said Robert Weinberger, a lobbyist for Continental Illinois National Bank and Trust Company of Chicago.

"Next year, Prox won't be around," he said, referring to retiring Senate Banking Committee Chairman William Proxmire, D-Wis., who spearheaded this year's drive for new bank powers.

Mr. Kidd and others in the group stressed that their relationship with the ABA is "not acrimonious." Still, they believe it is important to stake out a position that contrasts sharply with the ABA's. ■

Hawkeye to Pay $2 Million to Settle Fraud Case

By **ANDREA BENNETT**
Midwest Bureau

CHICAGO — Hawkeye Bancorp. said it has agreed to pay $2.08 million to settle a fraud suit against the company and its current president, Paul D. Dunlap, that arose from the 1979 sale of a southeastern Iowa bank.

In a press release, Hawkeye said its board had unanimously approved the settlement, and added "it was in the best interests of the corporation to settle." The Des Moines-based Hawkeye declined to comment further.

"Hawkeye is prospering. It is doing well," said Richard Levy, an attorney for Hawkeye. "It wanted to get an unpleasant incident behind it."

The lawsuit arose out from the 1979 purchase of the Mt. Pleasant Bank and Trust Co., Mt. Pleasant, Iowa, by eight businessmen. The eight men claimed that Mr. Dunlap and Hawkeye withheld key information from the purchasers. The bank failed in August 1982.

In October, following a seven-week trial in U.S. District Court in Des Moines, a jury convicted Hawkeye and Mr. Dunlap of common-law fraud, federal and state securities fraud, and also found that Mr. Dunlap had negligently misrepresented the condition of the bank. The jury ordered Mr. Dunlap and Hawkeye to pay $3.4 million to the eight purchasers.

That verdict was appealed. In March, the verdict against Hawkeye was overturned. But a decision on the appeal to the judgment against Mr. Dunlap was pending when the case was settled, said Larry Marcucci, an attorney for the former bank owners.

Bill Koehn, an attorney for Mr. Dunlap, called the settlement "a matter of pure economics. We felt very strongly we had a good opportunity on appeal to get [the verdict] set aside." The fraud verdict against Mr. Dunlap was also vacated as part of the settlement, Hawkeye's attorneys said.

Mr. Marcucci said attorneys for the parties involved had been discussing a settlement since spring. Hawkeye's earlier offer to settle for $1 million was rejected, court records show.

Even though the case against the bank was dismissed, Hawkeye agreed to the settlement because the plaintiffs had appealed that dismissal, Mr. Levy said. With interest and attorney's fees, the original judgment has grown to about $5 million.

In addition, Mr. Levy said, the plaintiffs sought to invoke a resolution passed by Hawkeye's board in 1984, indemnifying Mr. Dunlap from losses in connection with the case. According to *The Des Moines Register*, Hawkeye's board voted on July 11 to revoke that indemnification "but to again consider such indemnification when litigation is finally concluded."

Hawkeye said the settlement will be charged against third-quarter earnings. Second-quarter earnings were $3 million. ■

Lenders Expect Farm Income to Lag, Survey Says

▸ Continued from Page 2

quarter. Since then, drought conditions worsened in many parts of the states in the Minneapolis district.

Stanley L. Graham, an economist at the Minneapolis Fed who wrote the report, said the bankers' outlook may be too pessimistic for several reasons:

- Farmers can sell grain stored in facilities at the higher prices brought on by the drought.
- Many farmers have crop insurance to cover losses.
- Most rural banks are in far better financial condition than in recent years. In 1987, banks in the district reported increased profits, their nonperforming loans fell, and loan-loss reserve and equity capital positions strengthened.
- Congress has provided new forms of disaster relief.

Since the survey was completed, Congress passed and President Reagan signed the Drought Assistance Act of 1988. The law, signed on Aug. 11, requires the secretary of Agriculture to guarantee operating loans to farmers and ranchers affected by the drought and to encourage commercial lenders participating in the guaranteed farm lending program to exercise forbearance before declaring such loans in default.

The disaster relief legislation comes a year after another landmark agricultural assistance law took effect. The Agricultural Credit Act of 1987, among other things, established a secondary market for farm and rural housing mortgages.

Economy Had Been on Upswing

The farm economy, after six years of a deep recession, was rebounding strongly until this summer's drought. Most experts predict that the drought, despite its severity, will temporarily delay the recovery but not end it.

According to another report, the turnaround in the farm economy and last year's legislative package begins a new era in farm lending that "could revolutionize farm lending by changing the competitive balance among new and existing farm lenders."

The report, titled "A New Era in Farm Lending: Who Will Prosper?" was done by staff members at the Kansas City Fed. The study is reported in the June 1988 *Economic Review*, a publication of the Kansas City Fed.

The report says traditional farm banks and the Farm Credit System are losing market share in farm lending. Meanwhile, larger and better-diversified banks and the Farmers Home Administration have gained share.

"Current trends suggest some winners and losers in the farm lending market of the future," the report concludes. "Large nonagricultural banks appear likely to increase their market share, while small agricultural banks lose share." ■

New York Thrift Creates Bank for Kids, Following Example of Parent Company

By **LINDA ELLIS**

NEW YORK — A Long Island savings bank wants to turn small spenders into small savers.

By setting up the Bank for Kids at its Walt Whitman Mall branch in Huntington, Williamsburgh Savings Bank hopes to teach children to save money, whether it comes from paper routes or birthday bonuses. Williamsburgh, a unit of Republic New York Corp., will open the Bank for Kids on Sept. 7 — the first day of school on Long Island.

Republic New York has a similar facility for savers under the age of 18 at its New City branch in Rockland County. As in New City, youngsters at Williamsburgh's branch will be able to open an account for as little as $2.

Savings accounts will carry a 5.5% interest rate with no service charges and no minimum balance, said John Tamberlane, Williamsburgh's president.

"Our theme is to encourage and help parents teach their children how to save," said Mr. Tamberlane, who is responsible for retail operations at branch offices owned by Republic New York.

"Republic New York's mission has always been to protect depositors' assets," he said. "This especially applies to teaching children of the communities we serve that there is more to money than just spending it."

The pilot program at the New City branch has proved successful, with more than 500 accounts opened, said Mr. Tamberlane.

Each Bank for Kids customer will receive a membership card — a simulated cash machine card — and a passbook. Unlike custodial accounts, Bank for Kids' accounts give children full access to their money once parents sign release forms.

The unit is a self-contained 150-square-foot facility, complete with its own teller. Members can make deposits and withdrawals during the branch's regular hours or during special after-school hours when only youngsters are allowed in the bank.

Educational materials — including computers, interactive videocassette recorders, writing boards, and toy calculators — have been placed in the facility to help teach young depositors how banking can work for them

New York State Bankers Plan Education Seminar

NEW YORK — A business and education seminar will be hosted by the New York State Bankers Association in Syracuse, N.Y., on Sept. 19. It will focus on the challenge of encouraging teenagers to complete high school and the difficulty of meeting the growing demand for entry-level employees at a time when the teen population is shrinking. The seminar will explore successful joint business-education ventures and student perceptions of the business world. For information call 212-949-1173. ■

Texas Thrift Trims Branches

PHOENIX — Merabank will close seven Texas branches of First Financial Savings Association, El Paso, that it purchased in June under the Southwest plan.

The closures are scheduled for Sept. 9. Merabank is a unit of Pinnacle West Capital Corp., which has assets of approximately $13.6 billion. It acquired 13 branches of the El Paso thrift and one of Brownfield Federal Savings and Loan Association, Brownfield, Tex., in the June as a result of the June transaction. ■

COMMENT

The sale of mortgages offers tremendous advantage to the public as well as participating financial institutions, writes Dr. Paul S. Nadler. Among the benefits is increased availability in small markets and downward pressure on prices. ______ 4

Signs of economic slowdown, rising interest rates, and restraint by the Federal Reserve Board may be misleading in light of rising personal consumption, business investment, and exports, says H. Erich Heinemann. 4

To Our Texas Readers:

The chartered airplane delivering the *American Banker* to Dallas skidded off the runway during takeoff last week, delaying delivery of the Sept. 16 issue of the newspaper until today. (There were no injuries.) We regret any inconvenience late delivery may have caused.

UNRESERVED OPINION /COMMENTARY

The Dangers of Misreading Fed Signals

By BEN WEBERMAN

THE bullish euphoria that has blanketed fixed-income markets since early September may soon come to an end. Interest rates have been falling for weeks on the assumption that monetary restraint is cooling economic activity. Don't believe it.

The Federal Reserve Board's Open Market Committee, meeting this week, will use its powers to keep growth steady and noninflationary. The central bankers will use seasonal bank reserve fluctuations to create conditions that help stabilize public opinion about prospects for the economy and for interest rates.

The goal will be to prevent market exuberance — with concomitant lower interest costs — from touching off renewal of capital expansion or heightened consumer demands.

The central bank's objective: Keep the expansion alive, but without greater inflationary pressures.

Before the Open Market Committee meeting, bank reserve targets have called for net daily borrowings in a $600 million to $650 million range. This is consistent with federal funds trading close to 8⅛%.

Following the meeting, the directive to the manager of the open market trading desk will remain unchanged. It will call for conditions that hold the federal funds rate close to the 8⅛% level that has prevailed since mid-August.

Pitfalls for the Unwary

Market prospects are apparently clear-cut for the period immediately ahead. But there may be interest rate traps for the unwary.

Plans based on misconceptions could be costly. The traps will be baited by misinterpreted economic data and Fed reserve operations. At the outset, it is important to realize that business has not slackened.

FSLIC Near Ceiling On Notes: GAO Aide

By JIM McTAGUE
Washington Bureau

WASHINGTON — The Federal Savings and Loan Insurance Corp. could exhaust the lion's share of its resources for eliminating troubled thrifts by the end of next week, based on a government estimate.

Frederick D. Wolf, director of the accounting and financial management division of the General Accounting Office, told the *American Banker* last week that it is possible the FSLIC could have notes totaling $16 billion outstanding by Sept. 30. He based the projection on the current pace of FSLIC case resolutions.

In a telephone interview Friday, Federal Home Loan Bank Board member Roger Martin said he had "no problems with Mr. Wolf's numbers."

WASHINGTON BRIEFING

Industry Seeks Unity on Bank Bill

By ROBERT M. GARSSON

WASHINGTON MONDAY

Section Begins on Page 6

With the moment of truth fast approaching for bank deregulation legislation, the industry is scrambling to define and deliver a coherent message to Capitol Hill.

Is the industry for or against a bill? Officially, the major bank trade groups say they want the process to continue, though most acknowledge that the emerging legislation is looking steadily less acceptable.

The American Bankers Association vehemently opposes the bill approved by the House Banking Committee, though it still holds out the hope of seeing a measure similar to the one passed by the Senate enacted into law.

The message that has been picked up on Capitol Hill, according to staffers and bank lobbyists, is that the industry — represented by the ABA — wants the legislative process to stop, and the sooner the better.

Within the portion of the industry that hopes to see legislation this year, that message has touched a raw nerve. One result was the formation of a coalition of about 30 banks — inevitably dubbed "the gang of 30" — to serve as a counterweight to the ABA.

Bank industry lobbyists say the issue exploded to life at a meeting two weeks ago of the Legislative Liaison Advisory Committee (known by its acronym LLAC, pronounced "Lilac").

BANKING TRENDS /COMMENTARY

Rooting Out the Problems in Mortgage Servicing

By DR. PAUL S. NADLER

I could not help but think of the old adage, "The government never comes in until the private sector fails, but once it is in it never leaves," as I looked at two stories on mortgage servicing in the newspapers this month.

The first was a report that some people have been losing their homes or at least been subject to heavy penalties by local governments. The culprit is a bank or mortgage company that holds the owner's real estate taxes in escrow but has failed to make payment — or failed to make payment on time.

The second was an article by John LaFalce, D-N.Y., in *The New York Times* complaining about certain practices in the origination and sale of mortgages. He reports that some banks and thrifts have sold mortgages to companies that have altered the terms and made it difficult or impossible to get relief on complaints. The result is late payments of insurance and taxes.

Nadler Says:

'By being able to sell mortgages, the local institution will be more aggressive in pricing these loans.'

In sum, Mr. LaFalce believes people often pick a mortgage lender because they know the institution and are willing to sacrifice best rate for service. Then the mortgage is sold, and the customer is left with neither the service nor the rate.

The obvious conclusion from both stories is that we need new legislation to make sure the mortgage borrower is protected.

What is so bothersome to outside observers of the banking scene is that the origination and sale of mortgages offers tremendous advantage to the public as well as participating financial institutions. So if the practice is outlawed or severely restricted, the public probably will suffer more than the few protected people will gain.

But, as is often the case, legislation is proposed to handle the exceptions, and the general loss to the public caused by the restraints goes unpublicized.

Look at the good that the sale of mortgages provides our nation and its communities.

First, consider the local institutions that want to serve their communities with mortgage loans but lack the funds or capital. By originating and selling loans, the bank or thrift is able to serve the community and still get its money back to serve other people.

Institutions do not need to halt mortgage lending after a certain number of loans have been made. There is no limit to the number that can be originated, just as long as the loans made are of the caliber that can be securitized and sold in the national money capital markets. This certainly benefits the local community.

Think also of the benefits of the securitization process — to both borrowers and lenders.

By being able to sell mortgages, the local institution will be more aggressive in pricing these loans than if it had only a limited amount of money to ration out.

And if the local institution is not offering competitive rates, other institutions will come in to make the loans either directly or through mortgage companies.

Anyone who ever tried to get a mortgage from the only institution in town making home liens would appreciate the competition that the origination and sale process makes possible and the subsequent downward pressure on mortgage rates.

On the other side, think of the saver who formerly had little choice but to place funds in his local bank or thrift no matter the return offered.

The aggressive selling of Fannie Maes, Ginnie Maes, and other mortgage-backed instruments to the public brings new competition for savings. The result is that local banks and thrifts

The Perils Dr. Pangloss Faced May Resurface in the Economy

By H. ERICH HEINEMANN

THE long, hot summer of 1988 is over. In the Midwest, the drought has broken. Snow is starting to fall in the Rockies. Even the downtrodden denizens of Wall Street are enjoying a brief encounter with truly delightful living.

However, a lot more than the weather has changed. Fear of inflation, which pervaded the financial community only a few weeks ago, has started to fade. A new consensus is forming: The economy will slow, but not stall. Prices will remain relatively stable.

The Federal Reserve will be able to lower interest rates. The economic expansion will continue well into the 1990s — albeit well below the 4.3% growth rate that has been typical since the end of the recession in 1982.

Whatever a slow-growth economy may portend for the average working person, in the way of higher unemployment or lower wages, the prospect is positively panglossian to the financial community. According to Barton Biggs, who calls the tune for investment strategy at Morgan Stanley, "the signs of the slowdown in the U.S. economy were welcome. . . . A worldwide boom plagues investors because it means a bust follows."

As a result, values of stocks, bonds, and the U.S. dollar have rebounded smartly from their summertime lows — the latter two quite substantially. More and more, analysts appear convinced that Federal Reserve Chairman Alan Greenspan will keep interest rates stable — not only through the election, but in 1989 as well.

Voltaire May Have Been Right

Maybe Dr. Pangloss, the character in Voltaire's great farce, "Candide," was right when he said that "All is for the best in this best of all possible worlds." Perhaps.

But just to be safe, don't bet the family farm quite yet. The gurus of groupthink who inhabit Lower Manhattan — and the news publications that cater to their manic-depressive style of thinking — like nothing better than to find a new long-term trend in each government statistic. In the real, workaday world of Detroit, Dayton, or Duluth, things don't change so quickly.

True, a number of important business indicators — employment, retail sales, and industrial production among others — suggest that the pace of activity slowed during August. But careful analysis indicates that this pause is likely to be temporary.

Over the next six to nine months, total spending should be quite strong. By late 1989, however, business is likely to slow. Recession in 1990 is a distinct

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 10.

1. Seasoned felon Joseph E. Lucas, veteran of 20 years in prison, had been down on his luck. Mr. Lucas, 58, recently tried to rob three banks in Chicago without success — he couldn't even get arrested. His luck changed last week at the downtown St. Louis branch of Mercantile Bank, where he handed a note to a teller demanding $10,000. What unusual aspect of Mr. Lucas's behavior, after passing the note, made it certain that his luck would change?

2. Organized in 1973, the National Association of Urban Bankers represents about 1,600 individuals employed in the U.S. financial services industry. What is the common link among these members, and what overall corporate strategy does the association want senior management in the banking industry to define?

3. The third annual survey sponsored by the American Association of Equipment Lessors, Washington, shows that U.S. banks are willing to hold long-term new-finance leases, while none of the banks responding to the survey participate in the much more vigorous market for short-term operating leases. According to the association, operating leases for what type of big-ticket corporate assets constitute the fastest-growing segment of the new-equipment-leasing industry?

4. In those dimly remembered Dark Ages when computer memories were merely two-dimensional, capacity was measured in gigabytes, or billions of bytes. With the advent of IBM's Enterprise Systems Architecture/370, the three-dimensional addressable memory space has been expanded a thousandfold and is measurable in kilogigabytes or KGBs. In the constantly evolving language of technology, what whimsical nickname has been derived from this acronym?

5. The Federal Deposit Insurance Corp. reports a growth of $37.5 billion in bank assets during the second quarter. According to the FDIC, the direction this growth has taken reinforces a trend of recent years that is changing the profile of bank loan portfolios and the risks associated with them. Which category of outstandings is now dominant, commercial loans or real estate loans?

6. On the savings and loan side of the financial services industry, the risks and returns of various investments were plotted over five years by Wharton Econometrics. The study was performed by the Alliance for Capital Access, acting on a request from the General Accounting Office. By measuring the level of return an average thrift could have realized through a range of investment vehicles, the study found that consumer credit cards yielded the best return, 4.1%, compared with only 1.8% from adjustable-rate mortgages. What category of investment provided the second-best average return for savings and loans, 2.7%?

Greenspan Backs Reform

Federal Reserve Board Chairman Alan Greenspan told a House Judiciary subcommittee last week that Congress should not attempt to limit mergers between the nation's largest banks and securities firms as part of its effort to overhaul the Glass-Steagall Act. However, Mr. Greenspan added, action on Glass-Steagall is so important that the Fed would rather see legislation enacted, including the restraints, than no bill at all. Mr. Greenspan testified last Wednesday as omnibus banking legislation moved into the House Judiciary Committee's subcommittee on monopolies and commercial law. *(For further information, see the story on page 3 of the Sept. 15 issue.)*

Allied Irish Seeks First Maryland

Allied Irish Banks, Dublin, which two years ago discussed selling its controlling stake in First Maryland Bancorp., has now offered to buy the remainder of the stock of the Baltimore banking company for about $340 million. Allied Irish, Ireland's largest banking organization, said last Monday it would pay $35.25 per share for the 50.3% of First Maryland it does not own. First Maryland responded that a special committee of its board will review the offer. Banking analysts were not surprised by the development, but said they felt the price was a bit lower than expected. *(Sept. 13, page 1.)*

Chase Eyes New Jersey Office

Chase Manhattan Corp.'s board of directors this week will consider a management recommendation that almost a third of Chase's New York City employees be moved to New Jersey, according to an article published in last Wednesday's *Wall Street Journal.* The relocation, involving 5,000 employees, would be the biggest business exodus from the city in recent years. A spokesman for Chase said the company has been looking at sites in New York and in New Jersey, but that no final decision has been reached.

Affinity Checking from Citicorp

Citicorp Savings of Illinois has launched a checking account aimed at fans of the Chicago Bears. It is the first affinity checking account to be offered in the Chicago area or by Citicorp, the thrift's New York holding company. The thrift unveiled the account, aimed at fans of the professional football team, at a press conference last Tuesday. It links Citicorp's Citi-One account and Bears promotions and will be offered through Dec. 3. *(Sept. 14, page 1.)*

Texas Card Unit Gets High Price

The former First RepublicBank Corp. credit card business sold for a higher price than expected. Citicorp said it will pay $782 million for $623 million in credit-card receivables, or a premium of $159 million. A lower purchase price was anticipated because NCNB Texas, which has managed the credit card unit since Aug. 2, was told it could solicit the credit card customers even if it lost in the bidding process. NCNB Texas bid for the business, but its offer was lower than the one by Citibank (Delaware). *(Sept. 13, page 3.)*

Fleet/Norstar CEO Kiernan Dies

Peter D. Kiernan, chairman and chief executive officer of the Fleet/Norstar Financial Group, died last Wednesday from complications following surgery to repair an aneurysm in his aorta. He was 65 years old. J. Terrence Murray, president and chief administrative officer, will succeed Mr. Kiernan, who was scheduled to retire on Dec. 31. Mr. Kiernan was stricken on Aug. 18 while vacationing with his family on Cape Cod. He underwent emergency surgery at Falmouth Hospital in Falmouth, Mass., and was later transferred to the intensive care unit at Massachusetts General Hospital in Boston, where he was being treated when he died. *(Sept. 16, page 13.)*

Perspective/Insider Abuse Down, but Losses Rose in '87, FBI Says

By BART FRAUST

Mixed News in Bank Crime Report

INSIDER abuse is a declining factor in bank fraud. Officers and employees of financial institutions took part in 62% of fraud cases investigated by the Federal Bureau of Investigation last year, according to the agency's recently released report on bank crime.

This was down from 72% in 1986 and 81% in 1985.

The federal government, believing that fraud has been a major contributor to bank and thrift failures, has cracked down on white-collar bank crime in recent years. An interagency task force has been established on bank fraud, drawing members from the Justice Department and bank regulatory agencies.

"I'd like to say that this is the result of the effectiveness of our efforts to beat insider fraud," said Anthony Adamski Jr., chief of the FBI's financial crimes unit. "But it looks like a statistical quirk."

He said the enactment of legislation to combat bank fraud has made it easier to charge outsiders with the crime.

Data for 1985 — when insider abuses peaked — included $500 million in fraud-related losses relating to the 1982 failure of Penn Square Bank in Oklahoma City. This tended to bloat the numbers in 1985.

In addition, many recent cases have involved real estate fraud, and these typically involve large numbers of outsiders.

The decline in the insider factor was about the only good news in the FBI report, though.

Losses due to fraud and embezzlements totaled a record $860.6 million in 1987, up 41.9% from the $606.1 million in losses the year before.

The FBI had earlier reported that the 1986 losses totaled more than $1 billion, but the agency now says that number was incorrect due to a error in entering the data on its computers. The correct 1986 total represented a 28% decline in losses from 1985. Losses had more than doubled between 1984 and 1985, buoyed by fraud-related red ink at Penn Square.

Fraud-related losses at commercial banks last year increased 44.2% to $690.7 million. At savings and loan associations, losses rose 49.1% to $154.5 million. Victimization of credit unions dropped sharply, however, with losses at those institutions falling by 36% to $15.4 million.

Bank Fraud Losses

During 1987

	No. of Cases	Losses ($Mil.)
Banks	9,316	$690.7
S&Ls	1,993	154.5
Credit Unions	498	15.4
Total	**11,807**	**$860.6**

Source: FBI statistics

The FBI completed 11,807 fraud and embezzlement investigations last year, up from 10,416 in 1986. About 79% of the cases involved banks; 16.9%, savings and loans; and 4.1%, credit unions. Investigations leading to convictions totaled 1,701, down from 1,957 in 1986.

The report also included fuel for regulators and others who argue that fraud and failures go hand in hand. Texas, which had the greatest number of bank failures last year, ranked No. 2 in terms of bank frauds committed. The FBI completed 1,069 fraud and embezzlement cases in the state last year, including 727 involving commercial banks and 284 at savings and loan associations.

California, the nation's most populous state, also had the greatest number of fraud and embezzlement cases. The FBI completed 2,277 investigations in the state, including 1,631 at banks, 585 at savings and loans, and 61 at credit unions.

The number of old-fashioned bank heists increased 7.3% last year to 6,577. Sixty-four percent took place at commercial banks, 32.6% at thrifts, and 3% at credit unions. There were 20 robberies of armored carriers.

A total of $42.6 million in cash, securities, and other property was seized. About $8.1 million was recovered.

> While insider abuse was off signfificantly last year, the FBI found that losses due to fraud and embezzlement rose 42% to record highs.

Investigations have resulted in the identification of 4,867 people believed to be involved in the robberies. Of these, 2,940 were determined to be narcotics users and 832 had previous convictions for bank robbery, burglary, or larceny, the FBI said.

Bank robberies most often occurred on Fridays between 1 p.m. and 3 p.m. at a branch office located in the commercial district of a metropolitan area, the FBI data showed. The overwhelming majority of robberies took place at the teller window.

Heists at automated teller machines — a much publicized area of concern — occurred in just 68 cases investigated by the FBI, or about 1% of all robberies.

Guards continued to be the most effective deterrents against robberies. Only 312 robberies occurred with a guard present. In contrast, over 5,000 heists took place at institutions with alarm systems and surveillance cameras.

The report also covered injuries, deaths, and hostage taking during bank robberies. Acts of violence occurred during 191 of the robberies last year. Those resulted in 118 injuries, 14 deaths, and 47 people taken hostage.

Bank employees other than security guards were the most likely to be injured during a heist. Of the 118 injured last year, 50 were employees. Twelve customers were injured.

Perpetrators accounted for 12 of the 14 people killed, with most of the cases occurring outside the bank during the person's attempted escape. No customers died in robberies last year.

However, 9 customers and 31 employees other than guards were taken hostage, the FBI said. ■

GAO: $50 Billion May Be Needed to Bail Out Thrifts

THE General Accounting Office told Congress last Thursday that it has raised its estimate of how much it will cost the Federal Savings and Loan Insurance Corp. to resolve the financial crisis gripping the nation's thrift industry.

The FSLIC will need between $40 billion and $50 billion to close about 400 insolvent thrifts, according to Frederick D. Wolf, director of the GAO's accounting and financial management division. Mr. Wolf was appearing before the House Banking Committee, which is weighing a proposal to give the FSLIC the authority to issue notes explicitly guaranteed by the federal government.

Last December, the GAO — an investigative arm of Congress — put the projected cost at $26 billion to $36 billion.

Mr. Wolf said the FSLIC seriously underestimated the magnitude of its problems. It also underestimated the amount of capital it could attract from purchasers of troubled thrifts, he said.

GAO statistics show that the FSLIC has contributed 98.99% of the money in the six deals cut to revive insolvent Texas thrifts. Investors put up $105 million for institutions with $12.3 billion in assets. The FSLIC put up $10.3 billion in assistance in those deals, the GAO said.

Mr. Wolf recommended that Congress pass a resolution guaranteeing FSLIC notes as a stopgap measure. The FSLIC, however, should be limited to issuing a specific amount, he said, and the amount of guarantees on assets by the FSLIC also should be limited.

Speaking to reporters after his testimony, Mr. Wolf said the GAO believes that the notes already have the full faith and credit of the U.S. government. Federal Home Loan Bank Board Chairman M. Danny Wall originally asked Congress for the guarantees, but withdrew the request last week after the Reagan administration said the notes already have an implicit guarantee.

AN AMERICAN BANKER SURVEY

Poll: Consumers Prefer Visa to MasterCard

By JEFFREY KUTLER

THE American public shows no sign of ending its love affair with credit cards, but it is not shy to express a preference for one card over another.

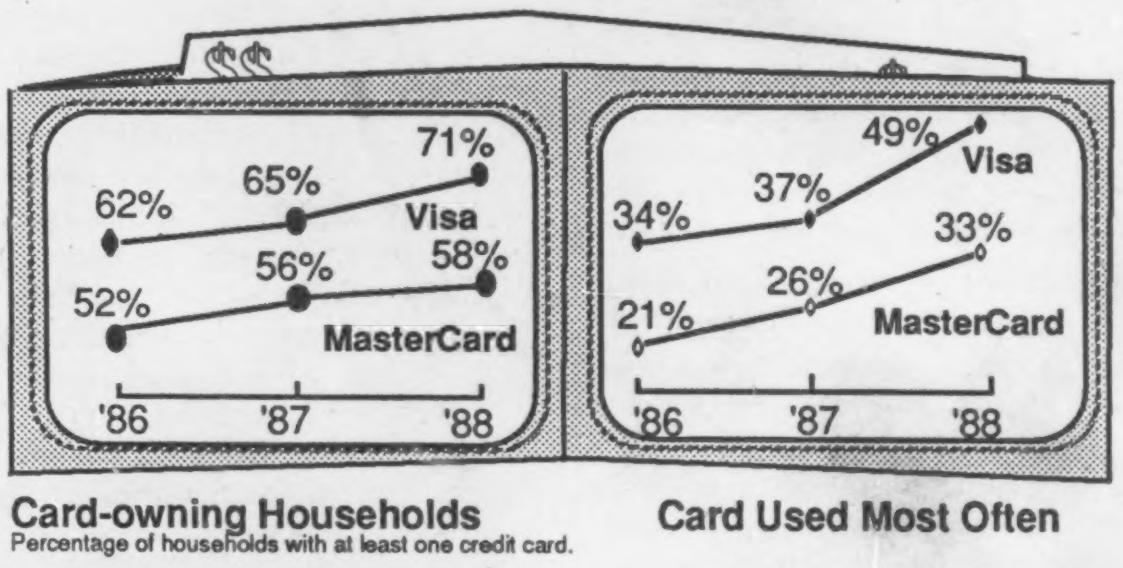
Consumers heap the most affection on Visa, and by a growing margin over MasterCard, according to the *American Banker*'s fifth annual consumer survey.

Consumer Survey

While Visa has an advantage, both bank cards are well established as mass-market consumer products. This gives them a strong numerical edge over the more upscale-oriented American Express card and the market's two upstarts: the Sears Discover card and American Express Optima card.

Here's to the Blue, White, and Gold

Visa is in 22% more cardholding households than MasterCard, and tends to be used more often.



Bases: 723 in 1986, 851 in '87, 763 in '88,

Source: *American Banker* survey, 1988

Visa has penetrated into a majority of American households: 53%, compared with 44% for MasterCard and 20% for American Express. In 1987 Visa was in 49% of households, and in 1986, 44%. In both those years, it was 7 percentage points ahead of MasterCard, compared with 9 points in 1988.

These are among the findings of the *American Banker*'s fifth annual survey

Credit Card Lending Soars at 3 Nonbank Banks

By L. MICHAEL CACACE

NEW YORK — Three limited-service banks scored the largest gains last year inbank credit card and related lending, according to an *American Banker* survey.

The banks, which now rank among the top 25 in the credit card field, are subsidiaries of three of the nation's diversified financial service giants — American Express Co.; Household International Inc.; and Sears, Roebuck and Co.

American Express Centurion Bank, Newark, Del., scored the largest percentage gain in credit card loans last year, according to this newspaper's third annual study of credit card lending at banks and thrifts.

Loans grew more than sevenfold, from $220.5 million on Dec. 31, 1986, when it ranked 78th among the top 100, to $1.65 billion on Dec. 31, 1987, when it ranked 12th.

Lists Are on Pages 30-33 and 40

The bank, a direct subsidiary of American Express Travel Related Services, was created in 1985 and began operations in 1986. In the spring of 1987, it began issuing the Optima card. To date, Optima has been offered only to a select group of the approximately 30 million American Express green, gold, and platinum cardholders.

Only people who have held cards for at least one year and who are "in good standing" were offered the Optima card. Platinum cardholders, who pay an annual fee of $300, receive Optima free. Green and gold card customers pay $15 on top of their annual $45 or $65 membership fee. Brittain Associates Inc., Atlanta, has estimated that there are more than one million Optima cardholders.

In addition to issuing the Optima card, the bank also provides "Sign & Travel" credit to American Express cardmembers and supplies lines of credit for the American Express gold

BANKING TRENDS

Honolulu: The Right Place at the Wrong Time?

By DR. PAUL S. NADLER

THE old adage, "If you have a choice between luck and brains, take luck," comes to mind as the American Bankers Association convention in Hawaii approaches. If a trip there could come at the wrong time, this is it.

ABA
1988
HAWAII

The gathering will take place on Oct. 8-12. The convention people at the ABA have every right to respond: "Look, we have to schedule these conventions at least five years in advance to get the number of hotel rooms we need and all the other facilities that are necessary to make a convention a success."

Be that as it may, it sure looks bad when bankers head for Hawaii while the newspapers are full of stories of bank and thrift failures and of the possibility of a taxpayer bailout of savings and loans.

Nadler Says:

'We must recognize that fewer bankers want to attend general conventions, no matter what the location.'

(In this regard, we must remember that the average person doesn't know the difference between a bank and an S&L. Thus, as thrifts face difficulty, and the talk of a taxpayer bailout is rife, the news hurts banking's image as well as that of the thrift industry.)

The convention's location not only creates image problems, but it also looks as if attendance will be extremely low.

At this writing, the ABA expects 7,000 to attend, far fewer than the 11,000 who attended the 1983 convention in the same city. So the convention may be a financial disappointment.

Fewer Attendees

Why is the number of attendees expected so low? Several reasons come to mind.

First, there are the bankers who look at the troubles in the financial sector and conclude that it doesn't look good for them to go to Hawaii at the present time, no matter how important the convention may be. It simply would not be understood by the public and would probably lead to some unpleasant reports in the local media.

Second, there are many banks that just cannot afford the trip anymore. The halcyon days of U.S. banking are over, and the several thousands of dollars that it would cost to transport a banker and spouse to Hawaii and then feed and house them during the convention are funds that could well be used elsewhere.

Third, most of the banks that are sending people are sending far fewer than before. Some banks that used to send 30 people may well be represented by 2 or 4 this year.

There are several reasons.

Again, cost is an issue. And on top of that, the ABA convention is no longer the center for correspondent banking activity. Major banks don't throw as many big parties to entertain thousands of bankers. And with fewer parties, the banks don't need to send as many hosts to press the flesh.

A fourth factor limiting attendance is the pace of mergers. When a bank is bought out and a healthy price is paid, there is little need for the acquirer to subsidize a trip to the ABA convention in Hawaii for the acquiree's officers and directors. Their attendance would probably do little to further the fortunes of the surviving bank.

And, finally, we must recognize that fewer bankers want to attend general conventions, no matter what the location.

OVERVIEW /COMMENTARY

Pious Phrases Aside, Cause of S&L Crisis Was Fraud, Greed, and Mismanagement

By H. ERICH HEINEMANN

The following is an update of a column that appeared in the *American Banker* on Oct. 12, 1987. The column warned of the massive crisis then confronting the thrift industry. Since that time, the crisis has become far more serious — and potentially far more costly to taxpayers.

□

AT the eleventh hour, Washington is finally awakening to the magnitude of the disaster that faces the nation's savings institutions — a disaster that government itself has helped to create.

At stake is not only a monumental federal bailout of depositors — almost certain to cost taxpayers well in excess of $50 billion — but also a complete overhaul of the entire system of deposit insurance for both commercial banks and thrift institutions.

The crisis promises to be a top priority in the new administration, whoever is elected. The overwhelming consensus, both inside and outside government, is that a general loss of confidence in the banking system is unthinkable, no matter how shaky savings and loan associations may become. Even so, the crisis, and the overall decline in the quality of credit that it represents, are likely to cast a pall over U.S. financial markets for the indefinite future.

Heinemann Says:

'Assets have been shuffled from one government agency to another, or from one S&L to another, without dealing with the underlying difficulties in the industry.'

The Federal Home Loan Bank Board said last week that savings and loan associations lost $7.5 billion during the first six months of 1988, on top of a $7.8 billion loss in 1987. The Bank Board added that 497 operating S&Ls were insolvent at midyear, down from 509 three months earlier.

However, at least 853 thrifts with more than $400 billion in assets were "hopelessly insolvent" at the end of last year, according to Bert Ely, an Alexandria, Va., consultant who has long been one of the best sources on the S&L crisis. The number of insolvent cases has likely increased since year-end 1987.

The Bank Board has announced numerous bailouts of distressed institutions in recent weeks, particularly in

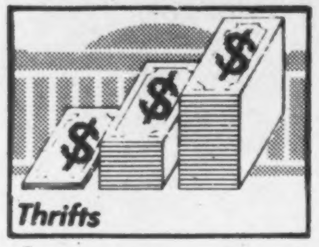
MEMORY BANK

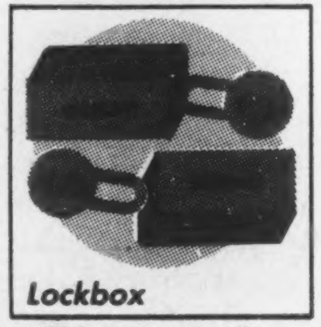
The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 38.

1. The Federal Savings and Loan Insurance Corp. uses notes in lieu of cash to finance the sale of failed thrift institutions. M. Danny Wall, chairman of the Federal Home Loan Bank Board, has said the FSLIC will not issue notes in excess of $16 billion, because that figure represents the limit of principal and interest the agency is capable of repaying over the next 11 years. According to the General Accounting Office — confirmed by a Bank Board member — when is the FSLIC likely to reach its debt ceiling?



2. Very much in the air at last week's 43d annual meetings of the International Monetary Fund and the World Bank in West Berlin were the equally unsettling concepts of debt fatigue and debt populism. Debt fatigue signifies the acknowledged incapability of debtor nations to grow their way out of their present difficulties without some kind of relief from their creditors. Where are debt populists found, and what do they advocate?

3. Wholesale and retail lockbox services, in which payments are directly received and collected for corporate customers, have retained their status as core products offered by 75% of the nation's top 100 banks. But a recent study by Trans Data Corp., this newspaper's research affiliate, finds a 10% drop in the number of wholesale lockbox customers per bank for 1988. What factor does Trans Data blame for this decline?



4. The Large Dollar Payment Systems Advisory Group, an industry committee representing 12 member banks, has taken a firm position on the best way to lower bank and corporate demand for risky intraday credits. Given a choice between the current regulatory approach, setting debit caps on the daylight overdrafts banks may incur, and the market approach, charging fees for these overdrafts, which strategy does the advisory group think most likely to reform the electronic funds transfer behavior of banks?

5. No overview of the affinity credit card market would be complete without mention of the potentially collectible and rather pricey "first edition" piece of plastic introduced by Leader Federal Savings and Loan, Memphis. What American folk hero is depicted on this colorful card, against a jukebox background?

6. The International Conference for Financial Planning, meeting in New York, took full notice of the changing market for planning services when it advised planners to abandon commissions and set a value on their time by charging fees in a manner similar to attorneys and certified public accountants. According to Gail Cook, founder and president of Perimeter Financial Group Inc., Atlanta, what segment of the American consumer market now represents the brightest hope for the financial planning industry?

— Robert Paul Molay

The Top 25 Firms in Bank Credit Cards

Sources of Data: Federal Regulatory Report of Condition for all FDIC-insured commercial and savings banks; and the Federal Home Loan Bank Board's Quarterly Financial Report. These data were provided to American Banker by **ADP Data Services Division, New York.** ADP restates its 1986 data on a pro forma basis for mergers in 1987. **Credit card loans outstanding:** For commercial banks and FDIC-insured savings banks, these loans are defined to include all extensions of credit to individuals for household, family, and other personal expenditures arising from bank credit cards or special prearranged overdraft plans. For thrifts reporting to the FHLBB, these loans include credit extended in connection with credit cards plus overdrafts on NOW accounts plus any other open-ended credit extended to consumers. **Commercial banks** include "nonbank" banks, and **thrifts** include both FSLIC-insured and FDIC-insured savings institutions. Industrial banks are excluded. The data were provided **by ADP Data Services Division, New York. (a)—** In July 1987, First Chicago Corp. completed its purchase of Beneficial National Bank USA from Beneficial Corp. for about $250 million. The bank's name was then changed to FCC National Bank. **(b)—** A direct subsidiary of Dean Witter Financial Services Group, which is in turn a subsidiary of Sears, Roebuck and Co. Greenwood Trust handles the "Discover" credit card operations for Sears. **(c)—** Acquired by MNC Financial on March 16, 1987. **(d)—** A subsidiary of Shearson Lehman Hutton Inc., which in turn, is a subsidiary of American Express. **(e)—** Formerly Union Trust Co. of Maryland, name was changed in March 1987. **(f)—** Formerly Bank of Virginia, name was changed in March 1987. **(g)—** Acquired by Lomas & Nettleton Financial Corp. from MCorp, Dallas, in Dec. 1986. The bank's name was changed (from MBank USA) in Nov. 1987. **(h)—** Formerly Commerce Union Bank, name was changed in Nov. 1987. **(i)—** In 1987 the bank acquired the credit card operations of Avco National Bank, Irvine Calif. Avco had $342.3 million in credit card loans outstanding at yearend 1986. Also in 1987, the bank acquired about $320 million in credit card receivables from Colonial National Bank USA, Wilmington. And last July, the bank acquired the credit card operations of Beverly Hills Savings, FS&LA, for approximately $36 million. Beverly Hills Savings had $41 million in credit card loans outstanding at yearend 1987. **(†)—** Bank acquired in 1987 and is not included in the 1986 total

VOL. CLIII NO. 188 Tuesday, September 27, 1988 ear

Today

Delegates gathering for the IMF and World Bank meetings find that industrial countries appear pleased with the current economic situation, while developing countries seem more disaffected than ever. ____ 2

First Bancorp. of Ohio's performance makes it a tempting acquisition target as Ohio's borders open to nationwide interstate banking next month. ____ 2

When California First merges with Union Bank, the resulting institution will be run as an 'emerging superregional,' bank, officials said. ____ 2

The Kroger Co. has arranged for Citibank, Chemical Bank, and First National Bank of Chicago to act as agents for a group of banks to provide $3.6 billion of senior financing for the retailer's restructuring. ____ 2

Banks are making do with less at the ABA meeting — traditionally, the commercial banking industry's single most important gathering. ____ 2

Attendance at the ABA's meeting in Honolulu is expected to be way down from the '83 convention there. ____ 11

Consumers are increasingly paying their card bills in full each month, prompting banks to take steps to compensate for the loss of interest income, an ABA survey shows. ____ 3

Emily-May Richards, incoming president of the National Association of Bank Women, sees the need for balancing the demands of professional and personal activities. ____ 24

Education will be emphasized during Jack Kopec's term as chairman of the Consumer Bankers Association. ____ 32

Executive Changes ____ 14
In the News ____ 3
Letter to the Editor ____ 4
Listing of financial services stocks 20

COMMENT

The Financial Accounting Standards Board is described by Harding de C. Williams. ____ 4

CORPORATE FINANCE

A marked-to-market interest rate swap introduced by Manufacturers Hanover may help cut credit exposure and reduce the capital required to support swap portfolios under pending federal guidelines. ____ 22

An open mind about financing requirements helped Standard Chartered Bank win the business of recovering Miniscribe Corp. ____ 22

William Clark's travels will continue as he leads the Fleet/Norstar Financial group's new private placement unit. 23

Worth Repeating

You can only go to so many luaus. How about a fire walk? Bankers are pretty quick on their feet, and they'd remember that.

Paul Yamashige, Central Pacific Bank, commenting on planned activities for the ABA convention in Honolulu. [Page 11]

COMMENT

The Limits of Local Diversification

By SANFORD ROSE

Many banks bristle at the suggestion that their loan portfolios are underdiversified. "We are well diversified in our particular service area," they proclaim. "Of course, we don't stray too far from that area because of lack of knowledge and difficulties of loan administration."

But is such a statement reasonable? Can a bank that essentially confines its lending activities to one geographic area, however diverse and variegated that area may be, call itself adequately diversified?

As noted in a recent publication of the Association of Reserve City Bankers, the risk in a portfolio of assets depends on three factors: the risk of each individual asset; the share of the portfolio devoted to each asset; and the correlation among asset returns.

A bank can prudently hold assets that are individually quite risky, provided that it obtains sufficient gains from diversification. This requires it to avoid concentrating the portfolio in a relatively few assets or in assets whose returns have high positive correlations.

Positive correlation refers to the tendency of returns or asset values

AN AMERICAN BANKER SURVEY

Discover Faces Profitability Test

By LISABETH WEINER
Midwest Bureau

IF Sears, Roebuck and Co. has achieved nothing else with Discover, its general-purpose credit card has been a remarkable marketing success.

Consumer Survey

The *American Banker*'s fifth annual survey on "How Consumer America Views the Changing Financial Services Industry" finds Discover held by 19% of U.S. households. This represents impressive growth from 13% in 1987 and only 7% in 1986.

The survey, based on 1,007 telephone interviews of a random cross-section of the American public, was conducted in May by Trans Data Corp., Salisbury, Md., a research affiliate of this newspaper.

But Discover is still far overshadowed by Visa and MasterCard. Officials of Dean Witter, the Sears subsidiary responsible for Discover, are determined to narrow the gap separating them from their chief competitors.

Discover cannot afford to rest on its laurels as a marketing prodigy, analysts observe. The card must become a financial success. To maintain credibility in the industry, Discover must meet its objective of solid profitability in 1989.

"If we're not profitable then,"

Check Rules Increase Float At Fed Banks

Return-Item Errors Stall Automated Processing

By YVETTE D. KANTROW

NEW YORK — The new law that limits the holds banks may place on checks has yielded an unexpected side effect — increased float in the Federal Reserve System.

Since Labor Day, float at the Fed has been close to $1 billion a day, compared with an average of $400 million to $500 million, according to officials at the Federal Reserve Bank of New York. The bank is attributing the rise to Regulation CC — rules that went into effect Sept. 1 to enforce the Expedited Funds Availability Act.

As the Fed was reporting an increase in float, many Federal Reserve banks were reporting problems in processing return items — checks dishonored by the banks they were drawn on for insufficient funds or other reasons of nonpayment — under Reg CC, a spokesman at the New York Fed said. Revamping the return-item process, which is notoriously slow and inefficient, is a major objective of the new regulation.

The return process has always been a small contributor to Federal Reserve float, the New York Fed spokesman explained, and recent disruptions to this process can be the cause of the float figure's sudden increase. Federal Reserve float is the unintentional addition to bank reserve accounts that occurs when Fed banks clear checks for their members.

Louise Roseman of the Federal Reserve Board's operations division in Washington confirmed that there have

COMMENT

▸ Continued from Page 1

to move together. That is, suppose the portfolio contains only two assets. These are positively correlated when high returns on one are associated with high returns on the other and when low returns on one are likewise associated with low returns on the other.

Perils of Positivity

Positive correlation reduces the extent to which diversification circumscribes risk. What's the use of diversifying if changes in the economic environment tend to have the same impact on the portfolio's various components?

In the extreme case of perfect positive correlation (a plus 100% association), there is no gain whatsoever from diversification. In most instances, however, positive correlations are less than perfect, meaning that while, on average, the asset returns move together, on occasion, they can move in opposite directions. So there is still some benefit in diversifying.

Negative correlation refers, quite obviously, to an inverse movement in returns or asset values. That is, when returns on one asset are low, those on another are high, and vice versa.

Negative correlation increases the power of asset diversification. The greater the degree of negative correlation, the greater is the reduction in risk. In the extreme and unlikely case of perfect negative correlation (a minus 100% association), diversification is optimal.

It is admittedly quite difficult for banks to measure the correlations —positive or negative — in their borrower populations. But few banks make formal efforts to do so, relying instead on such comforting bromides as "avoiding undue loan concentrations" or "lending to a great variety of customers in our service area."

As the Reserve City Bankers report points out, such approaches are inadequate. There is no substitute for an attempt, however arduous, "to quantify prospective relationships among different types of obligors."

Indeed, the evidence suggests that banks that do no measurements but instead rely on prudent attention to a given service area are apt to be cruelly disappointed in the extent of realized diversification. That's because, in most areas of the country, asset returns tend to be positively correlated, and, in some areas, this positive association is quite strong.

A Disquieting Association

The evidence is derived from an analysis of the relationship between losses on commercial and industrial loans and losses on "other" loans in the 12 Federal Reserve districts for an eight-year period, from the late '70s to the mid-'80s. It was found that C&I loan losses were positively correlated with losses on other loans in nine of the 12 districts. That is, when some commercial borrowers in these districts got into trouble, so did a fair number of real estate, farm, and individual borrowers (not to speak of other commercial customers).

Losses on C&I and other loans were between 52% and 94% correlated in the Chicago, Kansas City, San Francisco, and Minneapolis districts (the 94% correlation in Chicago reflects, of course, Continental Illinois' slipshod loan underwriting practices). Correlations were less elevated in the Philadelphia, Dallas, Atlanta, Richmond, and Boston districts.

Of course, in none of the nine districts was the positive correlation a perfect 100%, indicating that banks in these areas could still derive benefits from diversifying within their local markets. But the implication is that they couldn't get the same sort of benefits as those in the Cleveland, St. Louis, and New York districts, where correlations between C&I and other loan losses were actually negative.

And, most significantly, they couldn't get the same kind of benefits as they would have if some method had been found to cross district lines. For the country as a whole, the correlation between C&I and other loan losses was a negative 28%.

Because loss correlations tend to be positive intraregionally but negative interregionally, many banks should obviously look beyond their primary service areas, exploring ways to obtain loan business originated in many different parts of the country.

Given the limits of regional diversification, banks should be paying far more attention than they hitherto have to the nascent attempts to organize nationwide pools of loan assets — attempts reviewed periodically if not ad nauseam in this column.

A Boon to the Big . . .

This advice would appear sound even for those banks located in the districts that showed negative correlations between C&I and other loan losses. In New York, for example, the correlation was minus 40%, which seems quite healthy. This result, however, was for all banks and was heavily influenced by the giant institutions, which, given their worldwide scope, have the potential for more adequate diversification than smaller institutions.

Even the big New York banks, however, have considerable latitude for improving diversification by altering loss correlations. Although the association between C&I and other loan losses may be negative for these banks, the loss correlations within the C&I portfolio are likely to be strongly positive.

In last week's column, it was shown that overall risk for the top 50 banks in the country could be reduced by substituting a pool of high-grade assets for existing C&I extensions. This reduction in risk came about because the loss correlation between the pool and the existing C&I portfolio was lower than that within the portfolio itself. In fact, since the companies in the high-grade pool sustained practically no losses, the correlation approached zero.

But the smaller banks in the New York district — those with assets of between $1 billion and $5 billion — face a different situation. For such banks, the association between C&I and other loan losses was a positive 30%.

. . . But Especially the Small

Unlike the big banks, these smaller institutions are rather closely tied to the economic vicissitudes of their service area and could therefore benefit to an even greater extent from an infusion of assets originated outside their Federal Reserve district. This would seem especially desirable in the light of the current problems in the New York financial sector. Retrenchment in this sector has crimped the demand for commercial office space, threatening to reduce rents and thereby diminish the capacity of local real estate borrowers to service bank debt.

By diversifying outside of the New York Federal Reserve district, small and medium-size banks can materially reduce their standard deviations of loan loss — that is, the year-to-year variation in their loan-loss experience. This reduction in risk should cause a rational marketplace to be satisfied with a thinner layer of protective capital than would otherwise have been necessary. ■

LETTERS TO THE EDITOR

Federal Home Loan Bank of Dallas Closely Monitors Growth of Sick S&Ls

To the Editor:

On Sept. 14, the *American Banker* published a lead article, "Growth Curbs Set for Shaky Texas S&Ls," which included an example purporting to prove the point that "operators of troubled thrifts are digging deeper holes for themselves in the act of trying to grow out of their problems."

The article correctly pointed out that Guaranty Federal Savings and Loan Association increased its liabilities $829 million during 1987 and concluded that the funds "in turn were used to fuel a 32% growth in assets."

The facts are that the reported growth in liabilities was part of a plan approved by the Federal Home Loan Bank of Dallas to replace high-cost wholesale deposits with lower-cost core deposits at the institution.

During the latter part of 1987, Guaranty Federal, with our approval, acquired 14 branches and the core deposits that went with them from another FSLIC-insured institution. The debit side of this transaction was cash and short-term investments readily convertible into cash, which were to be used to replace high-cost wholesale deposits maturing during the first six months of 1988.

The facts are that Guaranty Federal's balance of high-cost wholesale deposits declined $892 million during the first six months of 1988, successfully accomplishing our objective.

The truth is that the Federal Home Loan Bank of Dallas carefully monitors the growth of all institutions that do not meet its regulatory capital requirements and allows such growth only when it fosters the preservation of the franchise value of the institution or is used to preserve or enhance the value of existing assets for the benefit of the FSLIC.

George M. Barclay
President
Federal Home Loan Bank of Dallas

Something to Say? We Want to Hear

The *American Banker* welcomes letters from our readers.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read us can do a better job running our organizations.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004, and please include a daytime telephone number.

Data Source: American Banker survey questionnaire. The 1987 data are as reported last year, unless otherwise noted. **Primary capital** is equity capital; the allowance for loan and lease losses; mandatory convertible debt; and the minority interest in equity accounts of consolidated subsidiaries. **Total capital** is primary capital plus secondary capital. **Secondary capital** is limited life preferred stock; subordinated notes and debentures not included in primary capital; and long-term debt of the parent company and its nonbank subsidiaries with an original maturity of seven years or more. **Primary capital ratio** is primary capital on 6/30/88 divided by total assets on 6/30/88, expressed as a percentage. **Note:** The American Banker ratio is not calculated in the same manner as the Federal Reserve Board ratio. The American Banker does not add the allowance for possible loan and lease losses to total assets, as the Fed does. For that reason, the American Banker ratio is from 5-to-15 basis points higher than the Fed ratio. **Net income** is income after taxes, loan loss provisions and minority interest, but before preferred dividends and extraordinary items. Income from discontinued operations is excluded. **(a)**— Data are for National Westminster Bank USA. **(b)**— Data are for Bank of California NA. **(p)**— Pro forma. **(†)**— Data are for 12/31/87. **( )**— Indicates a loss.

Mergers Swell the Ranks of Superregional Banking Companies

By THERESIA TREPEL
and JANET MURTHA

NEW YORK — Mergers among the nation's top banking firms earlier this year have resulted in the emergence of three superregional firms. A firm that ranks among the nation's 40 largest also has been created.

These are some of the findings from the *American Banker*'s fourth annual midyear update of bank holding companies, published today.

The largest new superregional firm was created on Feb. 29, when $16.2 billion-asset First Fidelity Bancorp., Newark, N.J., acquired the $12.7 billion-asset Fidelcor, Philadelphia. Fidelity, which ranked 37th in assets at yearend, moved to 16th place on June 30 with assets of $30 billion.

A superregional is defined by the *American Banker* as any nonmoney center banking company that ranks among the nation's 10 largest in assets. Also included is any banking firm with $20 billion or more in total assets that has merged across state lines to establish a full commercial banking presence in another state.

The next largest superregional also was formed on Feb. 29, when the $15.7 billion-asset Hartford National Corp., Hartford, Conn., acquired the $10.8 billion-asset Shawmut Corp., Boston. The merged company, Shawmut National Corp., ranked 21st at midyear with $27.2 billion in assets.

The third largest superregional was formed on Jan. 1, when $12.1 billion-asset Norstar Bancorp, Albany, N.Y., merged with $11.3 billion-asset Fleet Financial Group, Providence, R.I. The new firm, Fleet/Norstar Financial Group Inc., ranked 25th at midyear with $25.1 billion in assets.

National Westminster Bancorp, New York, was the nation's 38th largest banking firm on June 30 with assets of $18.2 billion. It was created on Feb. 1. Its parent, National Westminster Bank PLC, London, transferred ownership of National Westminster Bancorp NJ, Jersey City, (formerly First Jersey National Corp.) and National Westminster Bank USA, New York, to the newly formed company.

Overall, 36 of the top 100 firms have completed acquisitions of 52 other banking firms in 1988. In 1987, 38 of the top 100 firms acquired 59 other banking companies.

Other Survey Findings

The *American Banker* surveyed approximately 200 U.S. banking firms to prepare the listings that appear on pages 6, 8, 10, and 12. Some of the more important survey findings:

- The top 100 bank holding companies had assets totaling $2,084.5 billion on June 30, up 6.7% from $1,954.3 billion a year earlier.
- These firms had $1,456.6 billion in deposits, up 6.6% from $1,366.3 billion a year earlier.
- Their primary capital rose 13.3% over the 12-month period ended June 30, to $173.5 billion. The ratio of primary capital to total assets for the top 100 rose 48 basis points to 8.32% from 7.84% a year earlier.
- Among the top 100 firms, 98th-ranked Fifth Third Bancorp, Cincinnati, had the highest primary-capital-to-assets ratio, 11.26%. The 88th-ranked Texas American Bankshares, Fort Worth, had the lowest ratio, 4.44%.
- Net income for the top 100 totaled $6.93 billion for the first half of 1988, up 174.5% from a loss of $9.3 billion posted by the top 100 firms over the first half of 1987.
- The number of domestic banks controlled by the top 100 bank holding companies decreased 18.9% to 1,152 at midyear from 1,421 on June 30, 1987. But the number of domestic bank branches controlled by the top 100 increased 1% to 22,120 at midyear 1988 from 21,911 at midyear 1987.
- A regional breakdown of the top 100 companies shows that 29 in the Midwest, 27 in the Mid-Atlantic states, 22 in the Southeast, 9 in the West, 7 in the Southwest, and 6 in New England.
- At midyear, 23 firms met the *American Banker*'s definition of superregionals. These firms are identified in a listing on page 6.
- The top 25 earners in banking — among bank holding companies and banks not controlled by a U.S. bank holding company — had first-half net income of $6.2 billion, or 90% of the net income posted by the top 100 bank holding companies.

A regional breakdown of the top 25 earners shows 9 are in the Mid-Atlantic states, 5 in the Southeast, 4 each are in the West and New England, and 3 in the Midwest.

- Citicorp, the nation's top banking firm in assets with $205 billion on June 30, earned $717 million in net income over the first half to rank as the top earner in banking. Last year's top earner, SunTrust Banks Inc., Atlanta, ranked 18th this year with $151.9 million in net income, up 7.7% from $141 million for first-half 1987.
- There are seven large banks not controlled by U.S. bank holding companies that had assets within the range of the top 100 bank holding companies. Four of these are controlled by Japanese institutions; two are limited-service banks controlled by large diversified financial services firms, and the last is a Puerto Rican bank. A complete listing of large banks not controlled by U.S. bank holding companies appears on page 10. ■

COMMENT

A growing bank can get the benefits of an acquisition while keeping a unit's local flavor, writes Dr. Paul S. Nadler. 4

Currency values appear to have stabilized thanks to massive government intervention in foreign exchange trading, but critics say the calm is illusory, writes H. Erich Heinemann. — 5

Excerpts from the text of a plan by the American Bankers Association to address the Federal Savings and Loan Insurance Corp. deficit. — 10

Worth Repeating

We're a small state with small banks. It's an incursion to come out of the Big Apple to hit us here.

West Virginia bank regulator David Mudie on Goldome FSB, Buffalo, which has been ordered to stop selling certificates of deposit in the state's discount stores. [Page 3]

WASHINGTON BRIEFING

Fed Got Plum in AMBAC Case

By ROBERT TRIGAUX

An Insider's Guide
To Capital Issues

If you're a banking lawyer, or are willing at least to admit you know one, then undoubtedly you're quite aware of the industry rumblings over the AMBAC court decision — and its dire implications.

If you're not a lawyer, read on. The case may very well affect the entire industry.

The court decision is rapidly being dubbed "Everything the Federal Reserve Wanted But Was Afraid To Ask For."

AMBAC is a subsidiary of Citibank that in turn is subsidiary of the holding company Citicorp. When Citibank won approval of its application to the Comptroller of the Currency to have AMBAC offer municipal bond insurance, the insurance industry sued. It argued that the bank subsidiary was really engaging in an insurance activity beyond the scope of currently permissible activities.

Don't yawn just yet and assume this is another banks-versus-insurance controversy.

Here's the curve ball. Lurking in the decision of the U.S. Court of Appeals in the District of Columbia (American Insurance Association v. Robert L. Clarke, Comptroller of the Currency)

UNRESERVED OPINION /COMMENTARY

Used-Car Loan Buyers, Beware

By BEN WEBERMAN

WOULD you make a highly leveraged loan to a used-car salesperson? No! How about lending money to a captive finance company that makes loans to buyers of used cars?

Would you make a highly leveraged loan to a finance subsidiary whose credits are backed by receivables of second-hand auto loans? A number of smaller, regional banks are starting to buy these asset-backed credits.

Their naivete has bank regulators upset, as indicated by a recent interview with one regulator who asked to remain anonymous. For the worst of the credits — some are private placements, fewer are offered publicly — the statements are unaudited or unavailable.

Billions of dollars of so-called structured financing credits are being arranged. Most are on the up and up. But the success of the honest deals is pulling in vultures. Those are the ones to avoid.

But how can the live securitized debt issues be separated from those that are dead at birth? There are certain things to avoid, says the bank regulator.

First of all, don't take a position in any security when the salesperson has a deal that "guarantees" principal.

"The examiners are starting to hear of securitized assets with verbal puts and with verbal buyback offers." That is a certain danger sign, says this regulator.

Deal to Rescue 2 Texas Banks May Fall Apart

Investor Pohlad Seeking More FDIC Aid: Sources

By STEVE KLINKERMAN
Southwest Bureau

DALLAS — A dispute between Minneapolis investor Carl Pohlad and the Federal Deposit Insurance Corp. is threatening to derail the proposed rescue and merger of Texas American Bancshares Inc. and National Bancshares Corporation of Texas.

On July 20, Fort Worth-based Texas American and San Antonio-based National Bancshares announced a preliminary agreement to merge. Financing for the merger was to come from Mr. Pohlad, who as the acquirer agreed to invest up to $200 million, and from the FDIC, which was to provide $475 million in assistance.

However, industry sources on Friday said the July proposal was flawed, because Mr. Pohlad did not thoroughly audit the books of Texas American and National Bancshares before making his bid.

Further clouding the proposed merger, sources said, were the generous assistance terms granted in the rescue of NCNB National Bank of Texas, the federally owned bridge bank that contains the 40 former Texas member banks of First RepublicBank Corp. On July 29, NCNB Corp., Charlotte, N.C., won a contract to manage and ultimately acquire NCNB Texas.

The NCNB transaction stands in sharp contrast to Mr. Pohlad's deal. Without thoroughly examining the books of Texas American and National Bancshares, Mr. Pohlad consented to a

BANKING TRENDS /COMMENTARY

Acquirers Should Accent Local Bank's Flavor

By DR. PAUL S. NADLER

THE LOCAL bank had just been acquired by a much larger organization when the chief executive of the local institution got the following instructions from his new boss, the chairman of the holding company:

"If you've been giving $1,000 to the Boy Scouts locally, this year give $2,000. And for heaven's sake, don't tell them you have to check with us first — just do it!"

This example helps explain how a growing organization can work to carry water on both shoulders — to get the benefits of taking over an organization and generating economies of scale while keeping the local flavor that makes a bank successful in its community.

Ironically, many people think that the large institutions can beat the pants off the community banks. Usually it is the other way around.

Recently, a community bank president was addressing my seminar on financial institutions and was asked, "Don't you worry about the large banks taking away your business?

The banker's eyes lit up, and he laughed as he responded: "I have never lost a loan to a large bank in my 10 years as president."

He then told the story of a man who had kept a major account at a large competitor, only to be told one day when he went into his branch that his old branch manager was gone, that no one knew his situation, and that he would have "to go down to explain his position to the officers at headquarters to continue the borrowing relationship.

"He bumped into me on the street at lunchtime that day in our town and asked me, 'Pete, what's my name?'

"I laughed and told him his name, since I would see him frequently at the places where I would eat lunch and at the community meetings we both attended.

"That afternoon, he came in and opened an account with $700,000, saying, 'Nobody at my old bank knows my name anymore.' "

Some Changes Are Needed

Stories like the above are told again and again. And that explains why the community bank survives, and why so many community bankers are delighted when the community bank across the street is bought by a larger company. Immediately, people are moved out. Policies, faces, and even bank names change, and it is not the same bank anymore.

Why do acquiring banks make these changes?

Sometimes they feel they have to.

Marketing costs are so much lower when you have one bank name instead of a number of different bank names within a holding company.

Sometimes you just don't need all the people, and it costs too much to duplicate the talent in several local offices that are now part of the same company.

And there is the high cost of keeping separate banks, separate boards, separate annual reports, and separate operations.

Thus the acquiring bank usually blends the newly bought organization into its own fold — changing its name, replacing the board with an advisory board, and gradually or quickly changing policies and faces until it is not the same bank it was when it was acquired.

But it does not always have to work this way. Take, for example, the banker who told the CEO of the newly acquired institution to make decisions on donations to local charities. The holding company chairman runs an organization that is trying to keep the local flavor. How is this done?

- The holding company never changes an acquired bank's name. It just adds "Member of the Schmidlap Bancorp." to advertisements.
- By keeping separate banks, local boards are kept intact. An effort is made to keep morale high by asking for no staff reductions except through attrition.
- It is recognized that a bank must be of a reasonable size before it can be left to run independently. But if the bank is run independently, decisions are all made locally on everything that affects the customers.
- Only in areas such as back-office efficiency, duplication of duties, and investment does the holding company play a role — and here there is no way of affecting local customers by what is done to develop efficiency.
- In essence, the holding company bought the banks because they were doing the job in their territory. And the holding company doesn't want to kill what it has bought by robbing the local institutions of their independent flavor and autonomy.

Pieces of the Bank Package

And, in this regard, one can sit back and ask, "What do you get when you buy a bank?"

First, you get the building — something that most of the acquirers would gladly tear down and build over again if they could.

Second, you get the old 5¼% mortgages that will stay on the books forever. (A 20-year, 12% mortgage stays on the books an average of 8 years. A 20-year, 50% mortgage stays on the books 20 years, plus the grace period, and then the borrower comes limping in, not running in, to pay it off.)

Nadler Says:

Loyalty is a thin reed. It takes work, selling, vision, and sensitivity to keep people happy after their bank has been acquired.

Third, you get the core deposits — both of them, Charlie and Sadie.

Fourth, and most important, you get the loyalty and talent of the board, the officers, and the staff. And when you rob your bank of this most important asset, you rob yourself of much of what you bought the bank to get.

Loyalty is a thin reed. It takes work, selling, vision, and sensitivity to keep people happy after their bank has been acquired. And it takes a willingness to sit back and let the bank keep running much as it ran in the past, even though your money is now in it and you have the right to do what you want.

But what has to be remembered is that, when you buy a bank, you are buying entry into a territory, and you are paying a good premium for deposits that the bank has already gleaned from that territory.

Depositors Are Not Captives

But the depositors are not captives. If they are unhappy with the new owner of the bank, they can leave, as Pete found out to his great joy when the $700,000 opening deposit came across his desk.

And one is reminded of the story of the man who dies and is asked by God, "Do you want heaven or hell?"

He says, "Let me see them."

He sees them both. In heaven, they are reading the Bible and drinking tea, while in hell they are playing golf and tennis, partying, and having fun.

"I'll take hell," he says. Immediately thereafter, the partying ends, and it becomes nothing but sweat and hard work.

"How come it looked so great before, but now it's so terrible?" he asks.

God's reply: "Then you were a tourist. Now you're an immigrant."

The lesson for bankers — don't treat acquired institutions like immigrants if you want to keep their customers. And if you make the new acquirees feel like part of the family, it will also make more tourists (in the form of other banks) eager to immigrate to your corporation instead of to the competition. This is a bonus that can be highly valuable. ■

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 11.

1. In a retrospective of her recently completed term as president of the National Association of Bank Women, what issue did Evon Emerson cite as the main focus of her year in office?

2. The profitability of bank credit card operations depends, to a large extent, on interest income from unpaid consumer balances. A recent survey of 1,444 card-issuing banks, done by the American Bankers Association, indicates a significant change in the proportion of cardholders who pay their balances in full each month. Has this proportion been rising or falling since 1987?

Credit Cards

3. American Express Co. has announced a $50,000 program of assistance to flood-stricken Bangladesh, half of which will provide food and medical supplies through the International Red Cross. The other $25,000 in emergency funds is allocated to the International Child Health Foundation to control a potentially fatal disease that is the major medical problem resulting from the floods. Identify this medical problem.

4. Congress imposed a prohibition on new U.S. bank lending to the Republic of South Africa in November 1986. According to a report by the General Accounting Office, what was the effect of this ban on lending activities to South Africa in the first half of 1987?

5. Signet Banking Corp., Richmond, Va., is delivering telephone banking and MasterCard services to individuals with special needs through a telecommunications device known as a TTD. Signet says up to 14,000 residents in its Maryland-Washington-Virginia market could benefit from using this device. What is the special need of this market segment?

Home Banking

6. Shoppers at Sears, Roebuck and Co. retail outlets have long enjoyed the privilege of using the Sears credit card. Their options were expanded with introduction of Discover, the Sears all-purpose credit card. What new credit option for Sears shoppers will be tested this month at six stores in the Mid-Atlantic region?

7. The Bank of Boston's sports marketing program has been effective in building consumer recognition for this superregional institution through broadcast coverage of competitions in New England such as the U.S. Open golf tournament in Brookline, Mass., and sponsorship of the Boston Celtics basketball team and a rowing competition on the Charles River. At an estimated cost of less than $25,000, the Bank of Boston Sports Network has achieved a marketing coup by providing coverage of an event that is being carried by more than 50 radio stations throughout New England and in Denver, Detroit, Los Angeles, Pittsburgh, and New York. Identify this event.

NEWS MONDAY

AN AMERICAN BANKER WEEKLY FEATURE

This Week's Quote

It's like poison gas. You can't smell or see it, but it is in the room.

An ex-Comptroller staffer, reacting to a recent court decision involving Citibank that extends the Fed's jurisdiction over national banks.

Also in the News

Debts, Quotas at IMF Meeting

The Third World debt crisis and capital quotas were the major issues at last week's joint annual meetings of the International Monetary Fund and the World Bank in West Berlin. The tension over quotas — the capital that IMF member nations deposit with the fund — has been between the United States, which opposes an increase, and Japan, which would like to see total IMF quotas rise sharply, as well as its own shareholding in the fund.

The U.S. delegation was also irked because Japan stole the limelight with two new plans for dealing with the debt crisis. Most of the attention has been grabbed by the Japanese proposal to recycle more of its trade surplus to middle-income debtor countries as loans with below-market interest rates. *(For further information, see the stories on page 1 and page 22 of the Sept. 28 issue.and on page 2 on Sept. 27.)*

Irving Lawsuit Surprised BCI

Banca Commerciale Italiana angrily insisted last week that it heard nothing from Irving Bank Corp. before Irving charged in a lawsuit that the Italian bank had secretly agreed to "share the spoils" of the hostile takeover bid for Irving. Irving has charged in federal court that the Bank of New York induced Banca Commerciale to drop its friendly offer for 51% of Irving so that the Bank of New York could buy Irving on its terms. The Milan bank is not an actual party to the case. The single defendant named by Irving is the Bank of New York, which has waged a yearlong battle to acquire Irving. The lawsuit is Irving's latest move to derail that effort. *(Sept. 30, page 2.)*

Insolvents Eye Home Loan Bank

Officers from three troubled Texas thrifts have been nominated as directors of the Federal Home Loan Bank of Dallas, sending regulators scrambling to disqualify them before an upcoming board election. On Oct. 25, the Texas thrift industry will elect three directors for the Dallas bank. Of 10 candidates, 3 come from Texas thrifts that had either substandard net worth or negative net worth on June 30. Thrift experts object to the prospect of seating operators of insolvent thrifts on the board. *(Sept. 30, page 1.)*

Sears to Test Visa, MasterCard

Sears, Roebuck and Co. — the nation's largest retailer, which has long resisted taking bank credit cards in its stores — will begin testing MasterCard and Visa cards this month. Russell E. Hogg, president of MasterCard International, disclosed Sears' long-awaited move in his speech last week to the American Bankers Association's national bank card conference in San Francisco. Mr. Hogg said Sears will begin accepting bank credit cards at six stores in the mid-Atlantic region. *(Sept. 29, page 1.)*

South Africa Loans Rise

U.S. bank lending to South Africa rose slightly during the first six months of 1987, despite a congressional ban on such activities. The increase, according to a recently released report by the General Accounting Office, followed the prohibition on new lending that took effect in 1986. The GAO said it is unable to explain the small increase, adding that the U.S. Treasury Department is now looking into reasons for the upswing. *(Sept. 28, page 3.)*

Texas Reserve Doubled

First Interstate Bancorp, Los Angeles, will more than double the loan-loss reserve of its Texas subsidiary, First Interstate Bank of Texas, adding $180 million in the third quarter to offset a rise in nonperforming assets. First Interstate also said it would move about $400 million in nonperforming assets into a special-purpose subsidiary in the first quarter of 1989. *(Sept. 23, page 3.)*

Perspective/Banks Have Trouble Picking Political Winners

Big-Bank PACs Balance the Handouts

By BART FRAUST

POLITICAL action committees of the 10 largest bank holding companies, which traditionally have leaned toward the Republican Party, have begun to divvy up their money more evenly between Democrats and Republicans. But the largesse does not extend to Massachusetts Gov. Michael Dukakis, the Democrats' presidential candidate.

As of early September, Mr. Dukakis had received a meager $15 for his campaign from the Chemical Bank Fund for Good Government, according to reports filed by the committee with the Federal Election Commission.

That was it.

He got zilch from the PACs of Citicorp, Chase Manhattan Corp., BankAmerica Corp., J.P. Morgan & Co., Security Pacific Corp., Manufacturers Hanover Corp., First Interstate Bancorp, Bankers Trust New York Corp., and Wells Fargo & Co.

But Dukakis supporters should not be disheartened. In the past, the bank PACs have been something less than clairovoyant.

For example, in the 1985 and 1986 Senate campaigns, more than one-third of the money contributed by the top 10 bank PACs to U.S. Senate candidates went to individuals who later were defeated in primaries or general elections. Of the 11 Senate candidates who received the most money in 1986, five lost. In fact, during those years, the Senate candidate who received the most money was Slade Gorton, a Washington Republican who lost a reelection in 1986 to Democrat Brock Adams. Mr. Adams got less money than Mr. Dukakis. He got nothing.

Sen. Lloyd Bentsen, the Texas Democrat who is Mr. Dukakis' running mate, is hedging his bets by also seeking reelection to the Senate. While Mr. Bentsen's vice presidential campaign has not lit any fires among the banks, his Senate campaign is very popular. He received $24,750, the fifth highest total for any Senate candidate.

GENERALLY, the banks stay away from presidential politics. Only three of the 10 — the Citicorp, Chemical, and Manufacturers Hanover PACs — contributed to presidential candidates. No candidate received the maximum $10,000 contribution from any of the banks.

Vice President George Bush, the Republican candidate, received the most money, the Federal Election Commission reports show. Mr. Bush got $5,445, compared to $3,615 for Sen. Bob Dole, R-Kan.; $2,300 for Sen. Albert Gore Jr., D-Tenn.; $2,173 to Democratic candidate Jesse Jackson; $2,090 for Rep. Jack Kemp,R-N.Y.; $2,000 apiece for Rep. Richard Gephardt, D-Mo., and Sen. Paul Simon, D-Ill.; and $150 to Gary Hart, the former Democratic senator from Colorado.

In the 1987-88 campaign years, the bank PACs have distributed their money more evenly between the two parties in federal elections than in the past, reflecting the Democrats' current control of both houses of Congress. A total of 462 Democratic candidates for president, senator, and congressman received a total of $670,688 from the 10 committees, equal to 59.4% of the money contributed. For the Republicans, 315 candidates got $458,273.

This is in stark contrast to the 1985-86 campaigns, when the GOP got 56.7% of the money contributed.

Average contributions to both parties have become more even. The average contribution for Democratic candidates was $1,451.71, compared to $1,454.84 for the GOP. In the 1985-86 campaigns, the average contribution to Republican candidates was $217.42 higher than for the Democrats.

The committees have cut the number of campaigns to which they contribute by about one-third from 1985-86. However, the average contributions were up sharply. Each candidate received an average of $1,460.49, compared with $1,053.39 in 1985-86.

The Citicorp Voluntary Political Fund continues to be the biggest contributor to campaigns for federal office. The PAC divided $352,655 among 169 candidates. But the Morgan Companies Political Action Committee provided the highest average contribution, giving nearly $3,000 a candidate. The Bankers Trust Political Action Committee showed the biggest increase in contributions, from $75,000 in 1985-86 to $128,200 in 1987-88. The Chase, BankAmerica, and Manufacturers Hanover PACs gave considerably less this time around.

Contributions by Top 10 Bank PACs

During 1987-1988 (through Sept. 9)

	Number	Amount	Average	Percent Of total
Citicorp	169	$352,655	$2,086.72	31.2%
Chase	84	66,020	785.95	5.8
BankAmerica	74	44,628	603.08	4.0
Morgan	87	260,050	2,988.08	23.0
Chemical	115	103,325	898.48	9.2
Security Pacific	48	37,933	790.27	3.4
Manufacturers Hanover	78	70,800	907.69	6.3
First Interstate	26	26,900	1,034.62	2.4
Bankers Trust	63	128,200	2,034.92	11.4
Wells Fargo	33	38,450	1,165.15	3.0

Source: Federal Election Commission

As usual, Banking Committee members were the big money-getters. In Senate races, Chic Hecht, R-Nev,. a Banking Committee member, led with contributions totaling $38,499. He was followed by Donald W. Riegle Jr., D-Mich., at $33,600 and David Karnes, R-Neb., with $32,850. Individual bank favorites were John Chafee, R-R.I., at Citicorp; Mr. Hecht at Chase and BankAmerica; Mr. Karnes at Morgan and Bankers Trust; Pete Wilson, R-Calif., at Security Pacific and Wells Fargo; Daniel P. Moynihan Jr., D-N.Y., at Chemical; and Bill Bradley, D-N.J., at Manufacturers Hanover.

Top money-getters in the House races were Stephen L. Neal, D-N.C., $30,000; Thomas R. Carper, D-Del., $25,728; Doug Barnard Jr., D-Ga., $17,500; Jim Cooper, D-Tenn., $16,966; and Joseph DioGuardi, R-N.Y., $13,525. Mr. Neal, Mr. Carper, Mr. Barnard, and Mr. DioGuardi are Banking Committee members. Mr. Cooper is a member of the subcommittee on technology and finance of the Energy and Commerce Committee.

Rep. Fernand J. St Germain, D-R.I., chairman of the Banking Committee, received a total of $8,000 from the 10 PACs. Rep. John D. Dingell, D-Mich., chairman of the Energy and Commerce Committee and a proponent of limits on bank securities powers, received only $500 — from Chemical. ■

Wall Says He Won't Seek Taxpayer Bailout of FSLIC

FEDERAL Home Loan Bank Board Chairman M. Danny Wall said he will not ask Congress for a taxpayer bailout of the Federal Savings and Loan Insurance Corp. next month when he restates the size of the agency's deficit.

He told reporters last Wednesday that the FSLIC's projected revenues might also be revised upward to reflect an improved rate of recovery in the value of repossessed assets.

The General Accounting Office recently placed the FSLIC's mounting losses between $40 billion and $50 billion, prompting Senate Banking Committee Chairman William Proxmire, D-Wis., to call for a taxpayer bailout. He joined a chorus of critics who believe the industry lacks the earnings to shoulder the total cost of the FSLIC's recovery.

"To suggest a taxpayer bailout [for the FSLIC] is predetermined is inappropriate," Mr. Wall said.

Even if he were to agree at a future date that the FSLIC's projected revenues were insufficient to cover its losses, "there's a long way between that point and tapping the taxpayer for a financial contribution," Mr. Wall said.

"I think there is a long list of options that could be utilized," he said. "Some might require new law. Some might be within our current authority. They all need to be investigated before we suggest using taxpayer dollars."

COMMENT

The market may be sluggish next year, and now could be the time for investor and public relations officers to prove their value to senior management, says Arlen D. Southern. —— 4

Attracting top-notch workers is getting even tougher for the U.S. government, with pay lagging behind the private sector and the status of public service falling, writes Robert J. Samuelson. —— 4

TECHNOLOGY

The Social Security Administration will test the distribution of benefit payments via automated teller machines and point-of-sale terminals beginning next year. The program targets a segment of the population known for its resistance to electronic banking — the aged, the blind, and disabled. —— 10

The Terminal Capture Alliance Program is an incentive plan designed by Visa U.S.A. to encourage banks to replace aging point-of-sale terminals with newer technology. —— 10

Mellon Bank said it has contracts to process credit card payments for 14 federal agencies, almost a third of the 45 agencies participating in the government's program. —— 13

Scan-Optics Inc. has developed a processing system to serve the lower end of the bank card market. —— 15

Worth Repeating

We can be the Little Engine that Could if the world would just stop putting more cars on the train while we try to get up that hill.

Paul A. Willax, CEO of Empire of America, on the thrift's struggle for profitability. [Page 3]

AN AMERICAN BANKER SPECIAL REPORT

LDC Debt 'Cures' Are Bitter Pills for Big Banks

By BART FRAUST

NEW YORK — There have been a slew of proposals in the past year for easing the Third World debt crisis by reducing the amount of bank loans outstanding. All have one thing in common: They would cost the largest banks billions of dollars.

If the federal government were to require the 10 largest banking companies to forgive 30% of their Third World debt, they would have to write off $17.3 billion in loans. This is approximately $2.6 billion more than the special reserves established by these banks last June.

Free-market solutions also would be costly. The discount on the top 10 banking companies' Third World debt — the difference between book and market values — amounts to $29.9 billion, based on secondary market prices compiled by Salomon Brothers Inc. This discount is almost double the special reserves.

These are among the principal findings of an *American Banker* analysis of the Third World loan portfolios of the 10 largest U.S. banking companies as of June 30.

The special reserves were established with the belief that a discount equal to 25% of the exposure reflected approximately the market value of the debt. But many analysts believe that this percentage understates the discount and that market conditions are deteriorating.

"It's getting worse," David Cates, president of Cates Consulting Analysts Inc., said of the debt crisis. "There has been a political deterioration in the countries, and they are assuming a harder and harder line.

"And there is a new climate in the developed world where more aggressive forgiveness is seen as the solution," he said. "We're abandoning the hard line that they owe us 100 cents on

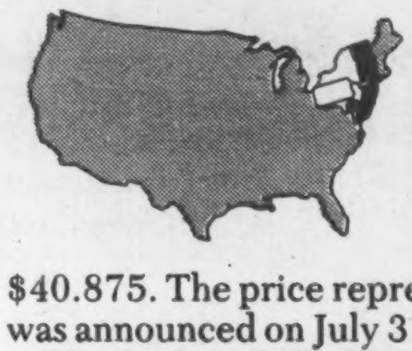
THE MIDDLE ATLANTIC

Analysts Bullish on First Fidelity

By GORDON MATTHEWS

NEW YORK — Fourteen months after it was unveiled in the nation's most expensive banking merger, First Fidelity Corp. seems to have convinced Wall Street that its prospects as a banking giant in the Middle Atlantic region far outweigh the $1.34 billion price.



The firm is a combination of First Fidelity, Newark, N.J., and Fidelcor, Philadelphia. With midyear assets of $30 billion, it ranks 16th nationally among banking companies and third in size among regional firms in the Middle Atlantic.

Its stock closed Monday on the New York Stock Exchange at $39.50 a share, just short of its 52-week high of $40.875. The price represents a strong comeback from its plunge after the deal was announced on July 31, 1987.

The deal was billed as a merger of equals, but some analysts and investors were startled by the $1.34 billion price tag, equivalent to twice Fidelcor's book value. It is one of the last deals among major U.S. banks to reach that multiple.

Market reaction was sharp. The day before the merger was announced, First Fi-

Irving Loses Appeal On Poison Pill Plan

By GORDON MATTHEWS

NEW YORK — A state appeals court has rejected a key portion of Irving Bank Corp.'s poison pill takeover defense plan. The decision is a major victory for Irving's hostile suitor, the Bank of New York Co., which now faces a 30-day regulatory deadline to acquire its Wall Street rival.

The appellate division of the New York Supreme Court upheld a lower court ruling that the "flip-in" provision of Irving's shareholder rights purchase program, intended to discourage unwanted investors even if no merger is planned, involves illegal discrimination.

Bank of New York said it was "gratified at this development" in the acri-

COMMENTARY

Preparing for Tough Times in Investor Relations

By ARLEN D. SOUTHERN

A GROWING number of chief executives may be wondering if they are getting a fair return on the time and money spent on investor relations and financial public relations. And, in the current sluggish stock market environment, they may be asking if they should even be going through the motions.

Small wonder that some CEOs feel as though they are in a rowboat without oars as they watch their stock drift down or trade in a very narrow range, regardless of how the company is performing. Or, as a banking analyst told me recently: "The market is terribly unforgiving. If you do well, you may stay even. If you surprise the Street with disappointing results, you are going to take a big hit!"

Despite some bullish signals from major brokerage firms, many investment gurus believe the economy could stay reasonably healthy next year without contributing much momentum to the stock market. With so much uncertainty in the overall business picture, 1989 could be a very sporty course for the banking industry.

If tough times are just around the corner, perhaps more investor relations and public relations officers should be asking themselves what they can do to justify the confidence of senior management and help their companies achieve the corporate goal of "creating value for shareholders."

> Perhaps more investor relations and public relations officers should be asking themselves what they can do to justify the confidence of senior management.
>
> — Arlen D. Southern

With this in mind, I would like to share a few observations with you, as well as some guidelines that may be helpful in evaluating and planning financial communications programs.

One of the toughest day-to-day challenges is the need to match expectations of senior officers with realistic assessments of how the company is being evaluated by the investment community. This means you must pay as much attention to providing timely feedback to management as you do in communicating your story to analysts and money managers.

Projecting the credibility of the company and its management is essential in good or bad times. And remember, corporate character is more important than corporate image. For some companies with long and distinguished track records, credibility is so high they tend to benefit from a reservoir of goodwill in bad times.

God did not create all CEOs equal. Some companies may be blessed with a charismatic leader who is a great statesman and a brilliant manager — the kind of executive the analysts love and one who inspires portfolio managers to sleep better, even when the company's performance isn't all that it might be. In contrast, many hardworking but less dynamic CEOs are turning in superior performances, but the financial community hasn't caught onto the great jobs being done, and thus the stocks aren't reflecting the companies' progress. Sound familiar?

Investor relations and public relations executives must work together to ensure that key financial opinion formers and decision makers become aware of the company's strengths, so that perception ultimately catches up with reality. Vital to this process is third-party endorsement, both from the financial community and the business media. If you are fortunate to have above-average brokerage firm research support, you may need to work on positioning the company in the business media.

Beware of the CEO who says: "If we keep doing an outstanding job, the stock price will take care of itself." The resentment factor is higher when the CEO reminds you: "We aren't running this company for the benefit of the Wall Street analysts." The first statement has no validity. The second statement is true, but reflects only understandable frustration.

A top salesman has to make many calls to get great results. The same holds true for most investor relations directors. Many of them spend too much time on the phone with or too much time seeing sell-side analysts — and not nearly enough time pursuing targeted institutional prospects.

Specifically, more meetings should be arranged each month with buy-side analysts and/or portfolio managers who 1) own none of your stock but have positions in similar stocks and 2) have a small foothold position in your stock but could be candidates to own several hundred thousand shares. If you haven't been able to target some of these prospective investors, you may not be spending enough time and money on available research.

Staffing is another area of concern. I am convinced that many senior executives ignore the understaffing of the investor relations function and thereby restrict its ultimate contribution. You must have the flexibility to place the senior investor relations person "on the road" without having to worry about who is going to handle all the calls and other projects at headquarters. If a major corporation is serious about its investor relations, it won't be operating with a one-person IR staff.

Today, with institutions controlling 80% of all shares traded in this country, there is no doubt about where to concentrate most of your investor relations efforts. If your budget is tight, consider focusing on "lead steer" analysts, regional brokerage firms, and selected money managers on the Eastern Seaboard from Virginia to Massachusetts. This will give you access to about 70% of all U.S. funds under management.

While it is important to do a good job of communicating with your shareholders, most companies try to be selective in targeting stockbrokers and high-income individual investors. One cost-effective target is the NAIC — National Association of Investors Corp. — a virtual mutual fund of more than 6,000 investment clubs. Employee stock ownership and dividend reinvestment plans are other obvious options.

When your company is performing well but being ignored, it could be time to do something more provocative to get greater "share of mind" within the financial community. A half-day or full-day seminar meeting for analysts and/or money managers may be just what is needed to stimulate greater interest and understanding. The key is to present a compelling story in a candid manner.

As you think about plans and budgets, it is sometimes helpful to simply ask yourself: 1) What must we do? 2) What should we do? 3) What would be nice to do?

How you spend your time may be more important than how much money you have to spend.

You may want to consider three relevant questions as you review prospective 1989 investor relations and public relations programs:

- Are you being sufficiently bold and innovative?
- Are you disclosing the facts and figures that analysts and investors need to make a favorable decision on your stock?
- Are you spending enough time and money to make a difference?

Investor relations have much in common with tennis. You have to anticipate. You have to keep your eyes on the ball. And you have to follow through. When the good times roll, it seems so easy to make things happen. Rising to the challenge of a generally negative marketplace requires much more concentration, resourcefulness, and competitive drive. ■

Mr. Southern is president of the Arlen Southern Co., a corporate communications and investor relations consulting firm in suburban Philadelphia. This article is based on Mr. Southern's recent speech before the Banking Investor Relations Association in New York.

ECONOMIC PERSPECTIVE

COMMENTARY

Public Service Loses Some Of Its Luster

By ROBERT J. SAMUELSON

WHEN I arrived in Washington as a reporter in the late 1960s, my first assignment involved covering some federal agencies. Power in these agencies typically lay with career civil servants — bureaucrats. These men, and most were men, arrived early and left late. They were smart and dedicated. Their energy and skills allowed them to share power with the White House and Congress.

The federal government still has thousands of these people, but their ranks are slowly thinning. At lower echelons, too, the quality of the work force is gradually deteriorating.

What's emerging is a "crisis of competence," as a recent report to the federal Office of Personnel Management puts it. Government increasingly can't attract top-notch workers. Federal pay lags behind private pay, and the status of public service is falling.

This matters. Belittling federal bureaucrats is easy until you recall the vital jobs they perform. They inspect nuclear reactors, maintain the national parks, conduct trade negotiations, prosecute federal crimes, run Medicare, and oversee the cleanup of hazardous wastes. They manage the space program and much of the military. Of the 2.3 million civilian federal workers, nearly half work for the Pentagon.

As a group, federal workers are highly skilled. One of every 10 government workers is an engineer, scientist, or computer specialist. In the overall labor force, the ratio is one of every 50 workers.

The OPM report ("Civil Service 2000," done by the Hudson Institute) predicts a rising demand for skilled workers. Computers will reduce the number of keypunch operators and clerical jobs. Meanwhile, the government will need more lawyers, engineers, biologists, and tax auditors.

Luring Top Talent

Recruitment already is becoming tougher. Some elite agencies, such as the State Department, do fine. Elsewhere, the story is different. Many applicants aren't qualified or once a job offer is made, decide to go elsewhere. In a recent survey of top agency officials by Government Executive magazine, about 60% said the quality of new recruits is falling.

Pay is clearly a problem. Government shouldn't have to compete with industry on a dollar-for-dollar basis: The appeal of public service — and job security — is a special benefit of government. But salaries can't fall too far behind, and they have. A 1988 Labor Department study finds an average gap of about 26%.

Consider some comparisons. A government computer operator at a GS-6 level is paid about $18,800 (GS means general schedule); comparable private pay is $22,700.

A midlevel accountant, or GS-11, earns $30,500 on average; private pay is nearly $12,000 more. Senior government attorneys, rated GS-15, receive about $64,000; the private equivalent

AN AMERICAN BANKER SPECIAL REPORT

Third World Debt Cures Are Bitter Pills for Big Banks

➤ Continued from Page 1

the dollar."

None of the proposals offered so far — compulsory or free market — have received unanimous approval from the banks.

Though maintaining the status quo contains dangers, the largest banks have preferred sticking with slowly reducing their exposures, granting new loans to the countries, and negotiating with the countries on a case-by-case basis.

"The managers of various New York banks seem to believe that through the protracted negotiation process, they will be able to get their money back," said one New York banker. "But you have to be skeptical."

Impact on Stock Prices

Third World debt is a major drag on bank stock prices. Each rescheduling brings lower interest rates and stretched-out repayment schedules. And as new capital requirements take effect, banks holding large amounts of Third World debt will be at a competitive disadvantage to those institutions that have rid themselves of these loans.

The proposals can be broken down into two basic types: unilateral debt forgiveness and voluntary debt reduction through the free market.

Most observers lately have come around to the point of view that a substantial reduction in the amount of debt outstanding — and not new lending — is the key to easing the crisis. An overall decrease in the debt — now estimated at about $300 billion — would reduce the debt burdens of the countries, permit them greater resources to make improvements in their economies, and ultimately place them in a better position to pay off the remainder of their bank debt.

The most recent unilateral debt-reduction proposal came from the United Nations Conference on Trade and Development. The group recommended a 30% across-the-board cut in bank debt.

The U.N. group argued that banks already have established large special reserves against Third World debt that would almost cover the losses. In addition, it said the losses could be spread over a three-year period to minimize the effects.

Future Lending May Dry Up

Bankers generally have rejected the UNCTAD and similar proposals, saying banks would be reluctant to make new loans to the countries after having to eat huge losses. Also, even after the chargeoffs, the markets might require banks to replenish the reserves. And this would mean more red ink.

Another set of proposals depends on private-sector solutions such as the debt-for-equity, debt-for-debt, and other swap markets.

Under these proposals, banks would exchange a portion of their loans for more liquid investments, such as equity positions in Third World companies or securities denominated in the local currency. Or they could sell their loans on the secondary market to companies looking to make similar investments. In this way, several large regional banks have eliminated all or most of their Third World debt in the past year.

The most recent proposal of this type was offered by a panel operating under the aegis of the United Nations Association of the United States. The panel was unusual in that it included several bankers, among them Rodney B. Wagner, vice chairman of Morgan Guaranty Trust Co., and Thomas S. Johnson, president of Chemical Bank.

The group suggested a program of voluntary debt reductions through negotiation with the debtor countries. A model for the program would be the recent Brazilian restructuring agreement, which along with new lending and revamped terms on existing debt, provided a "menu of options" for reducing loans, including local-currency bonds and expanded debt-for-equity swaps.

Dissenting Bankers

But even this relatively muted proposal was not unanimously accepted by the bankers who participated in the panel discussions.

Susan Segal, senior vice president of Manufacturers Hanover Trust Co. and the bank's representative on the panel, issued a written dissent. "Although we agree with the report's conclusion that debt service reduction programs should remain voluntary, we feel that, in many instances, their broad application, even on a cooperative and negotiated basis, could very well hinder the flow of funds necessary to keep countries on the road toward sustained economic growth," she wrote.

And William Rhodes, a Citibank group executive, issued a separate statement. While agreeing with the report's conclusions, he said the document underestimated the success of current programs to ease the debt crisis.

The *American Banker* analysis of bank Third World loan portfolios showed that unilateral, concerted cutbacks would produce a bloodbath for many of the banks.

A Multibillion-Dollar Writedown

A 30% cutback, as suggested by UNCTAD, would result in $17.3 billion in writedowns at the 10 largest banking companies, equal to about 30.1% of their combined common equity and reserves.

Of course, the impact varies depending on the exposures of the individual banks. Three California bank holding companies — Security Pacific Corp., First Interstate Bancorp, and Wells Fargo & Co. — would be affected least. Security Pacific would face $420 million in writedowns, or 8.6% of its common equity and reserves at June 30; First Interstate $372 million, or 10.3% of equity and reserves; and Wells Fargo $420 million, or 11.7% of equity and reserves.

For the seven largest banks, though, the writeoffs would amount to billions. Relative to common equity and reserves, Manufacturers Hanover would be hardest hit. The bank holding company's writedowns under a 30% debt relief plan would amount to $2.7 billion, or 54% of its common equity and reserves.

At Citicorp, comparable writedowns would amount to $3.8 billion, or 31.9% of equity and reserves; Chase Manhattan Corp. $2.5 billion, or 39.7%; BankAmerica Corp. $2.7 billion, or 43.5%; J.P. Morgan & Co. $1.4 billion, or 20.6%; Chemical Banking Corp. $1.8 billion, or 34%; and Bankers Trust New York Corp. $1.2 billion, or 26.7%.

Attempts to Reduce Exposure

Since the massive reserves were taken in June 1987, most large banks have moved gradually to reduce Third World exposure. Between June 30, 1987, and June 30, 1988, the 10 largest banks cut their Third World loans by an average of 7.8%.

One result of the cutbacks was to spur fast development of the secondary market, where loans are bought and sold for use in various swaps or to give banks a chance to improve the mix of countries in their portfolios. Market volume is expected to hit $20 billion

AN AMERICAN BANKER SPECIAL REPORT

LDC Chargeoffs Could Spur More Reserves, More Red Ink

▸ Continued from Page 18

this year, about double the level of 1987.

Another result, however, has been a sharp drop in the price of Third World debt. For example, in the 12 months ended June 30, the weighted average value of Third World loans dropped 21.4%, to 48.4 cents on the dollar from 61.6 cents, according to data collected by Shearson Lehman Hutton Inc.

Thus, the percentage decline in the values of the portfolios has outpaced the percentage decline in exposures.

> Manufacturers Hanover would be hardest hit. The bank holding company's writedowns under a 30% debt relief plan would amount to $2.7 billion.

The pain involved in free-market-related writedowns would be offset in part by the huge special reserves taken by banks in June 1987. But some analysts believe that investors might respond to the heavy writedowns by asking for a further increase in reserves, causing another year of red ink for the banks.

In addition, the largest banks are able to get slightly higher prices than other banks in the secondary markets because they have access to the best deals. This also limits the losses from free-market solutions.

Despite the drop in value, billions of dollars in loans continue to be traded on the market, said Jay H. Newman, who manages the loan transactions group at Shearson.

He acknowledged, however, that the secondary market does not have great potential for solving the Third World debt crisis. "Many regional banks have used the market to eliminate their exposures," he said. "But the large banks are not going to get out using the secondary market."

At the end of the second quarter, the 10 largest banks held Third World loans with a face value of $57.7 billion, according to the companies' quarterly filings with the Securities and Exchange Commission.

Less than Half Face Value

Based on market prices at the end of June published by Salomon Brothers, the debt is worth about $27.9 billion.

The discount on these loans — the difference between the book and market values — amounts to $29.9 billion. That represents about 3.5% of the total assets of the 10 banks and and 51.5% of their combined common equity and reserves as of June 30. The discount is important because it is the amount that would have to be charged off after a loan sale.

Each of the top 10 banks has a different mix of countries in its portfolio. In an effort to get a more accurate picture of their portfolios, each of the banks' exposures was broken down by country as itemized in SEC filings. Market prices were then assigned based on the Salomon Brothers' prices.

For example, Citicorp lists 19 Third World countries to which it has exposure. The book value of the loans is $12.6 billion. The $4 billion in Brazilian loans has a market value of about $2 billion, based on the country's secondary market price of 50 cents on the dollar. When the same procedure is applied to all 19 countries, the portfolio has a market value of $5.9 billion. The $6.7 billion discount represents 3.3% of Citicorp's assets and 56.3% of common equity and reserves.

The values at other banks are more difficult to ascertain because other institutions disclose less information. Under SEC rules, bank holding companies simply have to disclose countries where exposure equals at least 1% of assets. For undisclosed portions of a bank's Third World portfolio, a 50% discount was applied.

Third World debt problems have the least effect on the large California banks. Security Pacific's $1.4 billion portfolio has a market value of about $713 million, about 51% of book value. The discount amounts to less than 1% of assets and 14.3% of common equity and reserves.

7 Banks Would Take Big Hits

At the seven banks with the heaviest exposures, the free-market proposals would have a greater impact than at the California banks. Manufacturers Hanover's $9 billion in debt has a market value of $4.2 billion. The $4.8 billion discount represents 6.9% of assets and 96% of common equity and reserves.

BankAmerica's $9.1 billion in loans, when marked to market, are reduced to $4.6 billion, equaling 4.8% of assets and 72.6% of equity and reserves.

But maintaining the status quo also poses problems. Detecting the impact of Third World debt is difficult and at first glance seems nonexistent. Citicorp has the largest total exposure, but its stock trades at one of the highest multiples to book value of any of the top 10 banks.

The effect can be seen, however, by looking at Third World loans as a percentage of assets. Stocks of the banks with the least exposure as a percentage of assets — Security Pacific, First Interstate, and Wells Fargo — trade at the highest multiples to book.

This relationship applies equally well to the seven banks with the greatest exposure. Among these banks, Bankers Trust New York Corp., Citicorp, and J.P. Morgan & Co., have the smallest exposure as a percentage of assets, and their stocks trade at higher multiples than BankAmerica Corp.,

First Fidelity Corp. Finds Wall Street Receptive

▸ Continued from Page 1

delity's stock closed at $43.75. It lost $4 on the news and was $7 below its peak before the stock market crashed last Oct. 19. At yearend, the stock closed at $29.63.

"The Street is more forgiving than it used to be, but its forgiveness is still selective. In this case, they must like what they see," noted John J. Lyons, managing principal of Lyons, Zomback & Ostrowski, the New York financial consulting firm.

In a midyear analysis, Nancy A. Bush, banking analyst for Dean Witter Reynolds Inc., noted that second-quarter results, "although a bit shy of our estimate, did reveal the beginnings of the strong growth and exemplary expense control that we feel will be the hallmarks of this company."

First Fidelity "should be one of the most exciting stories in the banking industry over the next several years," she said.

The firm's early success is generally attributed to the strength of the region's economy and to the company's 41-year-old president and chief executive officer, Harold W. Pote, who previously headed Fidelcor.

"A bank of this size is driven by just two things, management and market, and it can only be as good as they are," noted Gregg R. Novek, director of research at Ryan, Beck & Co., West Orange, N.J. "First Fidelity has a fine management team, and the area is one of the best market areas for banking that you could think of in the country."

>
> — Gregg R. Novek
> Director of Research
> Ryan, Beck & Co.

Compact Market

Mr. Novek believes the banking firm derives considerable strength from its role as the market-share leader in a very compact two-state banking market — 35 contiguous counties straddling the Delaware River from Philadelphia to the New York State border.

First Fidelity boasts an 11% share of the deposit market in eastern Pennsylvania, ranking first in key parts of the area around Philadelphia. In New Jersey, Mr. Novek said, its 10% market share ranks as the best in the state.

"The compact primary market area provides excellent underpinning for a strong banking environment," he said. "Nearly 500 branches service an area 100 miles wide and 170 miles long. The small geographic region houses more than 5% of the nation's population.

"Furthermore, New Jersey and eastern Pennsylvania have been experiencing an economic boom. As a result of a shift from a manufacturing economy to a service orientation, blue-collar jobs have been replaced by white-collar positions," he noted.

That has meant a "dramatic rise in personal income, while adding diversity to the labor force," and has resulted "in a more stable and recession-resistant economy," Mr. Novek said. "New Jersey's per capita income ranks second in the nation behind Connecticut."

The market's economy is characterized by spillover dynamics, he noted. "Prosperity in New York City has driven up costs of land, labor, and taxes, causing an exodus to New Jersey. Similarly, New Jersey's recently found prosperity has spilled over into eastern Pennsylvania, enhancing that region's economic activity.

"Highway improvements and completions as well as low unemployment — which has created a labor shortage in New Jersey — have increased the economic ties between eastern Pennsylvania and New Jersey," Mr. Novek said.

"Pennsylvania's more affordable housing," he noted, "combined with an influx of major corporate headquarters into central New Jersey, has given employees the impetus to live in Pennsylvania." ■

LDC Debt Cut Would Stun Top 10 Banks

▸ Continued from Page 19

Chase Manhattan Corp., Chemical Banking Corp., or Manufacturers Hanover Corp.

One major concern is that the exit of regional banks from the Third World market will concentrate the debt in the hands of the largest banks. They will have to hold on to this debt in a climate of political uncertainty in the Third World and growing pressure for debt forgiveness.

To Carole Berger, bank analyst at C.J. Lawrence, Morgan Grenfel Inc., holding on to the debt places the banks in a perilous situation, which she likens to a game of Russian roulette: "Five out of the six chambers are still empty and will cause no damage if the gun is held to one's head and the trigger is pulled," she wrote in a recent report. "However, there is a one-in-six chance of blowing one's brains out." ■

Regulators Warn of Kiting Scheme

West Coast Bureau

LOS ANGELES — Federal thrift regulators in Atlanta are warning financial institutions in California to be on the lookout for a major check-kiting scheme that cost at least one financial institution more than $1 million in less than two months.

Several travelers check companies also lost at least $700,000, said the Federal Home Loan Bank of Atlanta. The scheme has moved into South Florida from Maryland, Ohio, and Texas, the agency said.

"The FBI has informed the bank that at least one of the suspects in this scheme, Walid Mohammad, has flown to California and may start the same scheme in that area," the Home Loan bank said.

According to the Federal Bureau of Investigation, people purporting to be of Middle Eastern descent open apparently legitimate businesses, such as supermarkets, which are then used as fronts to penetrate financial institutions.

Checking accounts are established in the names of the businesses, and after the accounts are in place for a minimal time, the individuals begin kiting checks that are drawn either on nonexistent accounts or on accounts maintained at other financial institutions that have been closed or have insufficient funds.

The alleged operators of the scheme are based in Lansing, Mich., said the Atlanta bank, whose chief investigative specialist is Edward L. Bowker. Mr. Bowker can be reached at 404-888-8035. ■

Bank of America in Vienna Sold

SAN FRANCISCO — The Bank of America completed the sale of its branch in Vienna to Algemene Bank Nederland. Terms were not disclosed. The branch employs 58 people. ■

Commercial Paper Rose In August, NY Fed Says

NEW YORK — The amount of commercial paper and U.S. dollar bankers acceptances rose in August, according to the Federal Reserve Bank of New York.

Commercial paper rose $2.8 billion to $426.4 billion outstanding on a seasonally adjusted basis — the seventh increase in a row but the second smallest of the year. Dealer-placed financial company paper posted the smallest of its seven increases.

Bankers' acceptances rose $796 million to $64 billion, following a $1 billion drop in July. Bankers' acceptances are negotiable time drafts used primarily to finance movement or storage of trade goods.

Both the commercial paper and bankers' acceptances figures for July were revised downward, the Fed said. ■

Bank CEOs: The Work Is More Demanding than Ever

Highlights of the Survey

The *American Banker's* first national survey of bank chief executive officers found:

- The CEO has worked at his bank an average of 20.7 years.
- He has served in the top position for an average of 6.5 years.
- Almost one-third have worked in a business other than banking.
- Business, finance, and marketing are the most common undergraduate degrees, but 32.5% earned a liberal arts or humanities degree.
- The CEO's average work day is 10.4 hours.
- Three-fourths do work at home in the evening.
- Monday is the most productive work day, and Friday the least productive.
- Three-fourths work at least one Saturday a month, and 40% work at least one Sunday a month.
- Seven out of ten executives labeled their management styles as "participatory."
- Slightly more than two-thirds of the CEOs consider their job "very enjoyable," while the remainder call it "enjoyable."

By RICHARD RINGER
First of 2 Parts

THE CEO TODAY

In Texas there may be no job more challenging than steering a bank that is struggling to make a comeback.

Friends advised Donald E. Powell not to risk his unblemished career by accepting an offer to become chief executive officer of First National Bank of Amarillo. They said the bank, which had $46.6 million in combined losses because of bad loans during three consecutive years beginning in 1984, could not be turned around.

"People [were] saying you can't do it," recalled Mr. Powell, who had climbed steadily up the corporate ranks through the bank's lending department. "But that's like telling the cowboy you can't ride the bull."

Ignoring the advice, Mr. Powell took the reins at First National in March 1987. That year, the bank earned $3.7 million. During the first six months of this year, the bank recorded a $1.5 million profit.

The turnaround was not easy. Mr. Powell had to purge the bank's agriculture and energy loan portfolio, which had caused many of the losses. He was forced to develop a bold, innovative strategic plan — one that previous management could not or would not develop. And he had to marshal a young staff to implement the plan, which included hard-to-swallow remedies such as staff cuts.

Such experiences are not unusual for bank chief executives. They are a new breed, guided by the same "I'll prove to you that I can do it" attitude of Mr. Powell, according to interviews with some of the nation's bankers and bank consultants.

The *American Banker* this summer sent questionnaires to chief executive officers of 125 of the 500 largest banks in the country. Forty CEOs, or 32%, returned the forms detailing what they think of their jobs and how their jobs have changed because of industry deregulation. Twelve of the 40 executives also agreed to participate in follow-up interviews.

Whether a rookie in the post, like the 47-year-old Mr. Powell, or a veteran, the chief executive is tested daily with decisions that hold the bank's — and his — future in the balance, based on

MCorp Asks For Bailout From the FDIC

By STEVE KLINKERMAN
Southwest Bureau

DALLAS — Facing a possible $500 million third-quarter loss, MCorp on Friday requested a bailout from the Federal Deposit Insurance Corp. that industry sources say could cost more than $1 billion.

As previously reported, the Comptroller of the Currency completed an exhaustive audit of MCorp last week and is expected to demand a massive loan-loss provision that would compensate for further deterioration of the Dallas-based bank holding company's troubled real estate loan portfolio.

As of June 30, 22% of the company's $5.05 billion real estate loan portfolio was in some stage of default. The real estate troubles are symptoms of an economic collapse that has crippled most of the major banks and thrifts in the region and saddled MCorp with $1.8 billion of problem assets that amount to almost 14% of gross loans.

"The economic problems of Texas and the Southwest have caused the company to seek additional sources of capital to endure the depression that the region and its financial institutions have suffered the past several years," MCorp's prepared statement said.

The company is expected to announce preliminary third-quarter results early next week, following discussions with regulators about the findings

Trade Groups Pay Handsome Salaries

By JIM McTAGUE
Washington Bureau

WASHINGTON — Steroids might make the difference in the gym, but in this town, it takes money to build political muscle.

By that measure, the heavyweights among trade groups wrestling over bank powers legislation are the National Association of Realtors, with annual revenue of $61 million, and the American Bankers Association, with $60 million in revenue.

The U.S. League of Savings Institutions, half the size of the two hulks, follows with $34.9 million in revenue.

These are some of the findings of an *American Banker* review of tax returns by 18 trade groups filed with the Internal Revenue Service.

Another finding: Donald G. Ogilvie, executive vice president of the American Bankers Association, earned $375,000 in 1987, the highest *reported* salary among top executives at the trade groups surveyed. Only three other executives earned $300,000 or more:

- Edward I. O'Brien, president of the Securities Industry Association, at $360,000.
- Richard S. Schweiker, president of the American Council of Life Insurance, at $308,187.
- William B. O'Connell, president of the U.S. League of Savings Institutions, at $300,000.

The average salary in the survey was $208,000. That compares with an average of $119,000 for executives of not-for-profit corporations in general, according to a recent survey by Towers Perrin, a management consulting firm. Only two top executives in the financial trade groups surveyed had salaries of less than $100,000.

The survey also found that the American Bankers Association, now meeting in Hawaii, budgets the most money for conventions. According to the IRS data, the ABA convention and meetings budget is about $6 million.

Trade Groups Pay Handsome Salaries

➤ Continued from Page 1

providing the documents, and most others provided forms that lacked information — especially salary data.

A recent study by the General Accounting Office, an arm of Congress, found that 48% of returns filed with the IRS by tax-exempt organizations lack the required data.

By Washington standards, the trade executives cited in the survey are handsomely compensated. Congressmen earn $89,500 a year. Alan Greenspan, chairman of the Federal Reserve makes the same, and other board members are paid $82,000. That's only $2,000 more than the lowest-paid trade executive in the survey.

Recall the stir in Congress when it was disclosed that Roslyn B. Payne, the former president of the Federal Asset Disposition Association, earned $250,000 a year. House Banking Committee Chairman Fernand J. St Germain called the association a "fat cat agency." Ms. Payne's successor, Gerald Carmen, receives $100,000 a year.

Nevertheless, trade groups are big business in Washington. A recent survey found they are the capital's third largest industry behind government and tourism. Not surprisingly, the groups in the survey had hefty payrolls for employees other than officers and directors.

The Realtors ranked first in this category with a 1986 payroll of $19.83 million. That amounted to 33% of its revenues.

Next largest was the ABA 1987 payroll of $14.08 million — 23% of its revenues.

Total payrolls at other organizations: the U.S. League, $11.21 million or 31% of revenues for 1987; the American Council of Life Insurance, $11.24 million or 39% of revenues for 1987; the Mortgage Bankers Association, $6.17 million or 25% of revenues as of August 1987; the National Association of Home Builders, $7.98 million or 35% of revenues as of March 1987.

Also, the Credit Union National Association, $5.11 million or 26% of revenues for 1987; the Securities Industry Association, $3.73 million or 31% of revenues for 1987; the National Council of Savings Institutions, $3.01 million or 31% of revenues for 1987; the Independent Insurance Agents of America, $1.34 million or 14% of revenues for 1986; the American Financial Services Association, $1.21 million or 34% of revenues for 1987.

> A number of organizations balked at providing the documents, and most others provided forms that lacked information — especially salary data.

Also, the National Association of Federal Credit Unions, $985,256 or 36% of revenues for 1987; the Consumer Bankers Association, $533,211 or 22% of revenues as of September 1987; the Financial Services Council, $235,290 or 39% of revenues for 1987; and the Association of Thrift Holding Companies, $142,811 or 45% of revenues for 1987.

Most organizations initially refused to disclose any salary data to the American Banker. In the majority of cases, the organizations were unaware of a 1986 law that requires tax-exempt organizations to keep copies of their returns, beginning with 1987, on file at their headquarters and any regional office with more than three employees.

The Mortgage Bankers Association of America, the National Association of Realtors, and the Independent Insurance Agents of America declined to reveal salary data even after being apprised of the law. They said their reading of the statute did not require them to disclose the requested data.

The ABA disclosed Mr. Ogilvie's salary but declined to reveal compensation for other employees.

The Realtors group said it voluntarily released 1986 revenues, but not salaries. It has not filed a return yet for fiscal 1987. The group said it did not have to disclose 1986 salary data because the new law applies only to 1987 returns.

FSLIC Measure Lacks Major House Support

By JIM McTAGUE
Washington Bureau

WASHINGTON — A bill to raise an additional $5 billion from the thrift industry for the insolvent Federal Savings and Loan Insurance Corp. will face an uphill battle in the House this week.

Staff sources said that the proponents of the measure lack majority support, due in no small part to an all-out assault by the U.S. League of Savings Institutions.

Even if the bill clears the House by Friday, the day the 100th Congress is set to adjourn, chances are slim the measure will make it through the Senate.

A key staffer on that side of the aisle said many senators view the legislation as an eleventh-hour attempt at saving face before the thrift crisis and Congress' failure to address the issue adequately become red-hot political issues.

The league sent Mailgrams last week to its 3,000-plus members, asking them to call their congressmen and urge defeat of the bill. It cleared the House Banking Committee last week by a 28-23 vote.

The league's Mailgram said the bill — which would allow the FSLIC to raise the money by issuing bonds — would saddle the healthy segment of the thrift industry with "a crushing debt service." Some thrifts would be driven into insolvency, the Mailgram warned.

The Mailgram left the impression the bill was on the congressional fast track. But staffers said it would have to get on the fast track to become law by Friday.

League spokesman Mark Clark characterized the bill as an attempt to get around the proposed national deposit insurance commission that Congress is apt to endorse before it goes home. He said the commission should be permitted to study the FSLIC crisis before Congress begins prescribing cures.

Supporters of the bill are expected to go to the House Rules Committee on Tuesday or Wednesday in an attempt to bring the bill to the floor for a full vote.

Rules Change Overruled

An attempt to get those rules suspended for the bill last week was aborted because supporters did not have the required two-thirds vote.

One staffer said several Republican members of the Banking Committee who supported the bill indicated they would not vote to waive the rules. This change of heart came on the heels of a tremendous lobbying effort by the Texas League of Savings Institutions and the Federal Home Loan Bank of Dallas, the staffer said.

A bill to recapitalize the FSLIC, passed in 1987, provided the agency with the authority to borrow $10.8 billion — an amount now deemed sorely inadequate.

The administration pushed for $15 billion in bonding authority for the agency, but the league convinced Congress that amount was excessive.

House members influenced by the league voted for $5 billion for the FSLIC; the Senate voted for $7.5 billion.

After the administration threatened to veto the measure, Congress approved a $10.8 billion recapitalization package.

The bill, introduced by Rep. John J. LaFalce, D-N.Y., would also free the FSLIC from the current limit of using no more than $3.75 billion of its bor-

Trade Groups Pay Handsome Salaries

▸ Continued from Page 2

The *American Banker* has asked the IRS to release information for the groups that refused to comply voluntarily. The IRS is researching the filings and said it will release what information it has.

The IRS instructs organizations to list officers, directors, trustees, and "other persons having responsibilities or powers similar to those of officers, directors, or trustees." Any compensation to these persons also must be listed.

The law permits the IRS to levy fines against organizations that refuse to comply with the new law.

Because of increasing complaints from the public, the IRS is considering issuing new reporting guidelines to tax-exempt organizations, said spokesman Steve Pyrek. "It's new territory for organizations to have their returns available for inspection at their places of business," Mr. Pyrek said.

Several groups approached for this study had not filed yet for 1987. The Investment Company Institute said its fiscal year has just ended. A spokeswoman said the organization will comply with the law when it files its 1987 return but reneged on an earlier promise to provide information for this story.

to 12 hours, according to the survey. He sacrifices nights, weekends, and time with his family.

The chief executive's world is jammed with deadlines, pressures, frustrations, and challenges. Planning, compromise, and sacrifices are needed to cope with them. "There's always something that's a critical issue" facing the CEO, said Mr. Piper of NBD Genessee Bank.

"But that's the CEO's responsibility. You have to say to yourself that is part of what you look forward to. It's a challenge. That's why you're here."

On Monday, the *American Banker* Special Report continues with a look at what makes CEOs' jobs most difficult, their attitudes on the creation of a single federal regulatory agency, and the businesses they would most like to enter.

How the Survey Was Conducted

The *American Banker* survey is based on a questionnaire mailed in July to the chief executive officers of 125 of the 500 banks with the most assets as of Dec. 31, 1987. The banks were selected by picking the first 125 numbers, in a universe of 500, as listed on a random digits table.

The eligible banks ranged from the $154.6 billion-asset Citibank, New York, to the $585.9 million-asset Barnett Bank of Manatee County, Bradenton, Fla.

CEOs at 40 of the 125 banks completed and returned questionnaires, for a response rate of 32%. The rate is sufficiently valid for identifying trends among the sample group. All responses were anonymous.

In addition to completing the questionnaire, 12 of the 40 CEOs agreed to participate in follow-up interviews. Telephone interviews with that group were completed in September. ■

Mellon ATM Processing Transaction Volume.

THERE'S ONLY ONE WAY TO GO: MELLON ATM PROCESSING.

Go with Mellon and get in on the continuing growth of our EFT Systems.

Mellon's ATM Processing volume growth, compounded over a four-year period, has accelerated at a rate in excess of 65% annually. That's because we're doing it right. The proof: Since 1984 our transactions per year have grown from 12 million to 96 million... and are still growing.

There's no stopping us because we are committed and that commitment is reflected in the quality of our product. We have the support systems. We have the gateways. We have the technology. We have the future and your future in our reliable and high-speed processing systems. With Mellon ATM Processing, there's only one way to go. Up.

Mellon ATM Processing.... The power to get you going.

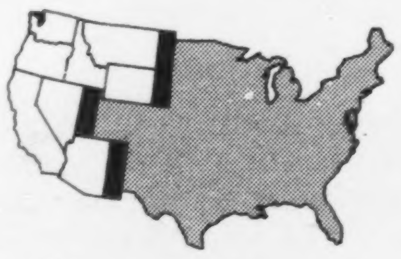
A Home Loan Bank Confronts Its Critics

By ROBERT LUKE and MICHAEL A. ROBINSON

SAN FRANCISCO — Every day, the wrecking ball destroys another section of the large green building at the intersection of the financial district and Chinatown.



Pedestrians stop and stare as the heavy machinery demolishes the final remnants of the old headquarters of the Federal Home Loan Bank of San Francisco.

Meanwhile, critics have been taking shots at the bank itself.

For example:

- Saratoga Savings and Loan Association, San Jose, filed a $10 million lawsuit earlier this month. The complaint alleges that the home loan bank and its directors conspired to damage Saratoga's business. Some of these directors are executives of Saratoga's largest competitors.
- The bank's top officers came under fire when word leaked out, via an anonymous letter, that they had flown to Italy and Spain to huntfor granite to cover the $62 million headquarters that will be built on the site of the old building.
- Many of the bank's 216 members — particularly the smaller institutions — are critical of its new tough regulatory approach. They also dislike the higher cost of examinations.
- The Federal Home Loan Bank Board — in what some industry sources have come to regard as a stinging rebuke — recently removed Lincoln Savings and Loan Association from the district bank's regulatory purview. The thrift in Irvine, Calif., had complained to the Bank Board about harsh regulatory treatment.
- And the General Accounting Office, an arm of Congress, is soon expected to launch an investigation into the San Francisco district bank and several others in the 12-member Federal Home Loan Bank System. The probe will focus on the handling of supervisory cases.

The San Francisco bank, with assets of about $36.5 billion and capital of about $3.6 billion, is the largest in the Home Loan Bank System. It is twice as big as the next largest district bank.

Fed Exec: Expand Powers, But. . .

By ANDREA BENNETT
Midwest Bureau

CHICAGO — Silas Keehn, president of the Federal Reserve Bank of Chicago, proposed Tuesday that bank holding companies be given expanded powers, but that the activities of federally insured bank subsidiaries be limited to traditional lending and deposit-taking roles.

Silas Keehn

Mr. Keehn said that such a firewall between a holding company and its bank subsidiary would prevent abuses of the public "safety net" provided by the government — deposit insurance and the right to borrow from the Federal Reserve System.

The plan would also require banks to hold subordinated debt as a "market related buffer" to protect them from losses.

The subordinated debt, Keehn said, would enable market forces to reinforce and complement the efforts of regulators. It would also provide a mechanism to convert the ownership of the bank to new owners with a minimal disruption to the market.

Under the structure proposed by Mr. Keehn, bank holding companies would be free to pursue a broad array of nonbanking activities as long as those businesses are conducted through subsidiaries of the holding company. Mr. Keehn did not specify what nonbanking activities would be permitted.

However, commercial banks would

AN AMERICAN BANKER SURVEY

Transamerica Finance Unit Cracks Top 10

By L. MICHAEL CACACE

NEW YORK — Transamerica Financial Corp., Los Angeles, a subsidiary of one of the nation's leading insurance firms, now ranks among the nation's 10 largest finance companies.

Transamerica Financial posted a 161% gain in capital funds last year — to $1.63 billion on Dec. 31, 1987, from $625 million a year earlier — and rose to eighth place from No. 23. The gain was the result of parent company Transamerica Corp.'s purchase of Borg-Warner Acceptance Corp., Chicago, in October 1987 for $782.5 million.

Borg-Warner, which at yearend 1986 was the nation's 25th largest finance company in capital funds with $560 million, was renamed Transamerica Commercial Finance Corp. and made a subsidiary of Transamerica Financial.

These are some of the findings of the *American Banker's* 38th annual survey of finance companies, published today. The 100 largest companies among those who responded to the survey have been ranked in order of their total capital funds as of Dec. 31, 1987. In addition, the *American Banker* ranked the top 50 companies in assets as of Dec. 31, 1987; the top 50 in net income for 1987; and the top 10 consumer, commercial, leasing, and factoring companies in receivables.

Top Finance Companies

Total capital funds on Dec. 31, 1987 (billions of dollars)

1. General Motors Accept. Corp.	$7.4
2. Chrysler Financial Corp.	4.6
3. Ford Motor Credit Co.	3.9
4. General Electric Capital Corp.	3.5
5. Sears Roebuck Accept. Corp.	2.4

The *American Banker* surveyed 192 finance companies to identify the top 100 firms in total capital funds. Of the 192 companies, 140, or 73%, responded to the survey.

The size and ranking of finance companies are determined by their total capital funds, which is the sum of stockholders' equity and noncurrent subordinated debt. Stockholders' equity is the sum of capital plus surplus. Noncurrent subordinated debt is subordinated debt with a remaining maturity of more than one year.

Transamerica Financial ranks ninth among finance companies in net commercial and industrial receivables, with $2.5 billion on Dec. 31, 1987. The company also ranks ninth among nonbank-related finance companies in industrial and equipment leasing, with $1.1 billion of those receivables.

Transamerica Financial's consumer lending operations are handled by another subsidiary, Transamerica Financial Services. Transamerica Financial Services had $2.34 billion in net consumer receivables on Dec. 31, 1987, up 2.6% from $2.28 billion in 1986.

The largest newcomer to the listing of the nation's top 100 finance companies is Signal Capital Corp., Hampton, N.H., a commercial finance and leasing company. Signal ranked as the 30th largest finance company on Dec. 31, 1987, with total capital funds of $397 million, up 6.8% from the year before. Last month, Itel Corp., San Francisco, a transportation and equipment leasing concern, acquired Signal Capital from the Henley Group Inc.

A Number of Acquisitions

In addition to the Signal Capital and Borg-Warner deals, there have been a number of other major finance company acquisitions in the past 20 months.

Late last month, U S West Financial Services Inc., a subsidiary of U S West Inc., Englewood, Colo., announced that it had acquired the fixed-asset lending division of Westinghouse Credit Corp., Pittsburgh, for an undisclosed amount. At yearend 1987, U S West Financial ranked 51st in capital funds, with $128 million; Westing-

Northern Trust to Buy Private Bank in Dallas

By RICHARD RINGER
Midwest Bureau

CHICAGO — Northern Trust Corp., in a move to expand its highly profitable trust business into new markets, signed a definitive agreement to acquire a Texas bank.

Interstate Banking

Northern Trust said on Tuesday that it agreed to acquire the $70 million-asset Concorde Bank Dallas, which was chartered in November 1985. Concorde is a private bank that caters to professionals and entrepreneurs, groups targeted by Northern Trust.

The $9.4 billion-asset Chicago company said it will add fiduciary and investment capabilities to Concorde. Terms of the deal were not disclosed, and officials at the banks could not be reached for comment.

The acquisition is consistent with Northern Trust's strategy of moving into major markets to offer trust services, said Thomas K. Brown, an analyst at Smith Barney, Harris Upham & Co., New York.

"The banks left [in Texas] don't focus on trust," Mr. Brown said. The Dallas market, despite financial problems there, offers Northern Trust "great opportunities," he said.

"Few banks are organized along lines of business" like Northern Trust, he said. In the trust business, "they can beat the pants off others," he said.

Last year, Northern Trust formed a trust operation in California after its bid to acquire BankAmerica Corp.'s personal trust division was rejected as too low.

In recent years, Northern Trust has acquired banks in suburban Chicago and added trust operations in Florida and Arizona. Northern Trust has since converted those trust operations to full-service commercial banks.

Earlier this week, Northern Trust said its third-quarter earnings increased nearly 40% to $25.5 million, or $1.53 per share, compared with $18.2 million, or $1.09 per share, in the year-ago quarter. The third-quarter figure included record trust fees of $50.9 million, which made up 72% of noninterest income and 38% of total taxable-equivalent revenue in the quarter. ■

FINANCIAL TECHNOLOGY UPDATE

A new item processing solution has significantly reduced labor costs for Liberty National Bank, Louisville, Kentucky. NCR's 7770-3000 Intelligent Multi-Pocket System, running a software application from Data Management Products of Omaha, Nebraska has eliminated 65 hours of return item processing labor. All 42 Liberty branches have been converted to centralized processing two months ahead of schedule.

The Financial TOWER System 2 (FTS 2) improves customer service while increasing the number of product offerings. Star Bank, a Cincinnati based financial institution, recently chose NCR's Financial TOWER System 2 for its new branch automation system. In addition to improved customer service and more product offerings, Star Bank wanted to increase productivity. They found that with their new NCR system in place, platform productivity grew in excess of the 20% they expected.

NCR introduces color CRTs for ATM use in August. 5070 Interior ATMs, 5084 Cash Dispensers and 5085 Extra-Function Terminals will all be capable of utilizing these new screens. A PC is installed to drive the EGA monitor which delivers vibrant colors. Standard graphics are provided or PC Paintbrush can be used to design new graphics or modify existing programs. Plus, the CRT's potential for "advertising" at the ATM site is impressive.

The ITX Windows Software System enables multiple host system jobs to be managed through one PC. As part of the new System 10000 software tool suite, ITX Windows allows users of NCR's Banker 80 II System to handle the after-hours work of up to 9 institutions in a multi-bank installation. In addition, loan officers can use the Loan Pricing system and review applicants' account records simultaneously. ITX Windows also supports software development with edit, graphics, view, and window creation capabilities.

For additional information on these new developments from NCR, phone 1-800-CALL NCR.

NCR

Loan to Mexico May Encourage New Debt Talks

By BART FRAUST

NEW YORK — The new $3.5 billion bridge loan to Mexico from the U.S. government will increase pressure on private lenders to start talks on restructuring the country's debt, bankers and analysts said Tuesday.

Bankers said so far they have received no requests from Mexico for negotiations, but they expect calls for new talks to begin shortly after President-elect Carlos Salinas de Gortari takes office on Dec. 1.

"It's clear that, with the new loan, there will be a heightened rhythm to get something done," said one New York banker involved in Third World debt talks.

Another banker said the new government's officials are still working out its debt policies.

Mexico has the largest debt load of any Third World country except Brazil. It has approximately $55.4 billion in foreign bank debt, including $13.6 billion in loans from the 10 largest U.S. bank holding companies.

The U.S. loan is intended to tide Mexico over until it obtains longer-term financing from the World Bank and the International Monetary Fund. Negotiations have begun in Mexico City on the new credits.

The new loan surprised many bankers, who had been extremely optimistic about Mexico in the belief that the country had made great strides in revamping its economy. In April 1987, in the midst of Brazil's debt moratorium, bankers approved $7.7 billion in new loans to Mexico.

However, now it appears that Mexico is returning to the list of problem debtor countries. Meanwhile, Brazil, after signing a new debt-restructuring agreement, is now drawing cheers from bankers.

Triple Whammy

Mexico has been hit with what one banker called the "triple whammy" of plummeting oil prices, the effects of Hurricane Gilbert, and skyrocketing domestic interest rates. The drop in oil prices has cut Mexico's trade surplus, forcing the nation to pay the interest on its foreign debt out of reserves.

"Apparently, there was greater pressure on Mexico's reserve position than we had thought," one banker said.

News about the bridge loan to Mexico comes at a time of heightened concern about Argentina, the third largest Latin American debtor country. In the third quarter, the 10 largest U.S. banks have listed an estimated $4.5 billion in Argentine loans as nonperforming. This has reduced these banks quarterly earnings by an average of 8%.

Negotiators for the banks and for Argentina are expected to resume talks today in New York on the country's request for new loans and a reduced interest burden.

However, bankers distinguished between Argentina and Mexico.

"There has been no discussion of Mexico's going nonperforming," one banker said. "The Mexicans have paid interest and continue to pay interest." ■

Correction

The cost of a corporate video done by an out-of-house professional production crew typically averages between $1,500 and $5,000 per minute for a 10-minute to 15-minute tape. The cost was misstated in "Beam Me Up, Scotty!" (Oct. 9, page 14.) ■

ECONOMIC PERSPECTIVE /COMMENTARY

Deficit Burnout Sets In After One-Too-Many Warnings

By ROBERT J. SAMUELSON

> *"Some of us stoneheads out here wish you [could explain] the national debt. . . . We know it's 'bad,' but many of us fail to see the connection between the debt and our own personal income."*
>
> *— Letter from a Reader*

I confess to being weary of writing about budget deficits. It's not only that people don't know what to believe anymore — my reader, I think, probably typifies three-quarters of Americans — but I'm not sure what to tell them.

There's a mutual disengagement from this subject, which may explain why the deficits haven't been a decisive issue in this presidential campaign. They bore and bewilder most Americans.

The blame for this confusion lies heavily with those alarmists (not me) who have been loudly screaming for years that failure to fix the deficits would lead to economic catastrophe. Each time one of these frightening forecasts hasn't come true, the public has become a little more desensitized to the whole issue.

The debate has focused obsessively on the deficits' possible adverse economic effects. As long as these aren't obvious, no one wants to do the dirty work of raising taxes or cutting spending.

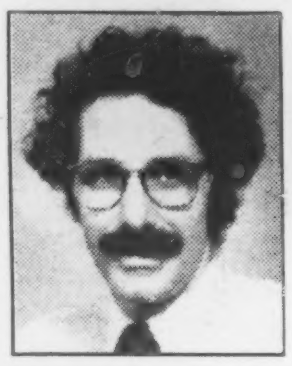
This is understandable, but only because the debate is totally backwards. A budget should be an instrument for political choice. Government programs should be popular or important enough to be supported by a roughly equal amount of taxes.

The discipline of matching spending and taxes means — at least in theory — that legislatures pass only programs whose popularly perceived benefits exceed the added public burden. The deficits signify that we've abandoned this useful discipline.

Both Sides Are to Blame

They are not merely Ronald Reagan's doing. Deficits endure because both liberals and conservatives find them convenient. There's a shared fear that, if push comes to shove, their side will lose.

Conservatives fear that defense spending will be savaged and taxes raised. Liberals worry that social programs will be gutted. No one wants to talk about these choices, so they shift the discussion to economics.



Samuelson Says:

'The deficits are mainly a political, not an economic, problem. You should conceive of them as a tax.'

Deficits have become the 1980s' all-purpose answer to any economic problem or question. During the vice-presidential debate, Lloyd Bentsen was asked if he could explain today's prosperity.

Bensten pounced on that one: "If you let me write $200 billion of hot checks every year, I could give you the illusion of prosperity, too." Wrong, Lloyd.

Yes, the deficits pumped up spending. But much of the added stimulus (perhaps 75% between 1982 and 1986) was accounted for by the higher trade deficits.

The recovery was powered mainly by the energies of a free-enterprise system: businesses trying to expand profits and markets; individuals trying to better themselves. Budget deficits don't explain all economic events of the 1980s, or even most. Many other influences are at work: inflation, the health (or sickness) of other nations, the public's mood, and so much more.

Everything intermingles. For example, you might conclude from what I said above that the budget deficits

Please see ECONOMIC: Page 12 ▸

Mr. Samuelson also writes a biweekly column for *Newsweek* magazine. His column for the *American Banker* appears every other Wednesday.

LETTERS TO THE EDITOR

Leach Plan Favored for Shrinking Sick Thrifts

To the Editor:

Everybody who is anybody seems to be loading their muskets in preparation for Project Extermination, wherein possibly 500 or more bankrupt thrifts are to be lined up for the coup de grace, a solution that is gaining new boosters with the dawning of each day.

At first the battle line appeared to have primarily small-town independent bankers on one side and the hemorrhaging horde of sick and irresponsible thrifts on the other. Earlier on, the ones saying what needed to be said were the various spokespersons for independent bankers, both inside and outside the Beltway.

Steadily, the condition of more and more thrifts grew worse and worse. But, true to tradition, banking's elite refrained from saying what needed to be said while the problem continued to grow.

Some were no doubt waiting to see whether the introduction of new brass over at the Federal Home Loan Bank Board would introduce a degree of logic to the management principles of that industry. Those waiting for a turnaround as a result of M. Danny Wall's appointment were, for the most part, disillusioned.

Soon Wall's supporters dwindled and their ranks consisted of little more than a cadre of administration appointees plus his former boss, Utah's Sen. Jake Garn. At that point the ranks of vocal opponents began to swell. As the days went by, the subtle, carefully worded criticism was replaced by more hand-to-hand combat reported daily in the media.

Earlier this month Mark Reidy, chief executive officer for the National Council of Savings Institutions, called for the closing down of the walking dead — the bankrupt and near-bankrupt members of the thrift industry. His expressed concern had to do with the damage these insolvent thrifts were inflicting on the healthy and near-healthy thrifts.

Also calling for the shutting down of thrifts already on death row was the American Bankers Association. It came as little surprise to discover, in the ABA litany of remedies, authority for bank holding companies to purchase thrift institutions — with no mention of limiting the purchase to sick or dead thrifts. Quite typical of the public-spirited ABA.

Then came soon-to-be-private-citizen Bill Proxmire, senator from Wisconsin and chairman of the Senate Banking Committee. Prox's proposal doesn't have a whole lot of blind followers at this point.

It calls for a $20 billion tap on the U.S. treasury and $30 billion tap on the thrifts whose names have not yet shown up on the roster of the sick, lame, and lazy. Many fear that a $30 billion tap on the remaining thrifts would simply produce a brand-new crop of cripples.

Congress isn't exactly drooling at the chance to come up with $20 billion either. But Prox can afford to come up with something as loose as that. After all, he doesn't have to get up in the morning.

Jake Garn, Proxmire's cohort in the let's-sink-Glass-Steagall campaign, takes strong exception to Proxmire's bid to dole out poison pills for the soon-to-die thrifts. Claiming that earlier administration attempts to thwart the thrift crisis were sidetracked by Proxmire, Garn claims Proxmire's public attack at this point will make it more difficult to attract buyers for troubled thrifts.

It's unlikely that the Proxmire proposal will add substantially to the difficulty in finding thrift buyers. Most would see the negative news as old news by now. Would-be buyers are inclined to base their buy or no-buy decision on how sweet a deal they can negotiate with the FSLIC.

Without a doubt, the thrifts that survive this crisis, — and it is a crisis — will feel pressure annually of having to cough up bigger and bigger deposit insurance premiums. But the increases will come in steps, making it possible to pass the increases along to the borrowing public. The public will pay through increased borrowing costs and by paying for whatever form of bailout is ultimately given the combination to the vault at the U.S. Treasury.

An alternative must be found to this threat to the U.S. economy. Today we are told the deficit is mounting at the rate of some $10 billion per annum.

Those who would turn to the Treasury for a solution are up against Gramm-Rudman. And both presidential candidates are committed not to raise taxes if elected.

The only alternative would mean going to one of the big budget items for an offsetting cut. Defense, for instance, and that is highly unlikely.

Placing an excise tax on junk bonds holds appeal for many, for a couple of obvious reasons. But the barons of the junk bond industry are not apt to let that happen if they can avoid it — and they probably can.

Adding operating and/or insurance-premium fees paid by the thrift industry has its limitations, because the burden could become an industry backbreaker. Adding commercial banks to this proposal for a broader fee base will surely be considered. But, in fairness, at that point all lenders — including the likes of GMAC, Ford Motor Credit, Household Finance, Beneficial Finance, Commercial Credit, etc. — should be brought into the corral to play by the same rules.

Putting off the decision until after the 1988 elections is bad business. Anything that takes longer is even worse. Action is called for now.

At this point it would be difficult to point to a better, more feasible remedy than that proposed by Iowa Congressman Jim Leach, who serves on the House Committee on Banking, Finance, and Urban Affairs. The Leach proposal brings to a halt the common practice of the sinking thrifts — outbidding the competing financial institutions in the battle for deposits and underpricing the competing financial institutions on loans. Leach would set shrinkage levels to be met by thrifts with various degrees of capital impairment.

There is no better place to start charting a corrective course than with the Leach proposal.

Norbert McCrady
Retired Executive Director
Independent Bankers of Minnesota

AN AMERICAN BANKER SURVEY

Merger Boosts Transamerica Unit to No. 8 Among Finance Firms

➤ Continued from Page 2

house Credit ranked 13th, with $1.1 billion. Westinghouse Credit also reported $5.1 billion in net commercial and lease receivables on Dec. 31.

Earlier last month, Landmark Financial Services Inc., Silver Spring, Md., a consumer finance company that ranked 88th in capital funds with $32 million on Dec. 31, was purchased by MNC Financial Inc., Baltimore, from Signet Banking Corp., Richmond, Va.

In June, Irving Bank Corp., New York, announced that its principal subsidiary, Irving Trust Co., would buy substantially all the assets of Slavenburg Corp., New York. Slavenburg, a factoring firm that had $10 million in capital funds and $147 million in assets at yearend 1986, is a subsidiary of Credit Lyonnais Bank Nederland, Rotterdam, the Dutch affiliate of $168.7 billion-asset Credit Lyonnais, Paris, the world's 16th largest bank. Slavenburg did not participate in this year's survey.

In May, Manufacturers Hanover Corp., New York, sold Manufacturers Hanover Consumer Services Group Inc., Huntingdon Valley, Pa., to CrediThrift Financial Inc. for $685 million cash. CrediThrift, Evansville, Ind., is a subsidiary of American General Corp., a Houston-based insurance firm. At yearend 1987, Manufacturers Hanover Consumer Services ranked 10th in capital funds, with $1.5 billion; CrediThrift ranked 24th, with $643 million.

> The financing arms of the nation's largest automobile manufacturers — General Motors Corp., Chrysler Corp., and Ford Motor Co. — again rank as the nation's three largest finance companies.

In March, Mobil Corp., New York, announced it had sold its Montgomery Ward Credit Corp. subsidiary to a group of investors led by Montgomery Ward senior management, with fourth-ranked General Electric Capital Corp., Stamford, Conn., a substantial investor. Montgomery Ward Credit, Wilmington, Del., is the nation's 20th largest finance company, with $766 million in capital funds on Dec. 31.

In January, Bankers Leasing and Financial Corp., San Mateo, Calif., which ranked 52d in capital funds with $110.5 million on Dec. 31, 1986, was acquired by Citicorp, New York. The firm did not participate in this year's survey.

At yearend 1987, Citizens and Southern Corp., Atlanta, acquired Chemical Business Credit, Chemical Bank's factoring division, for about

California to Vote On Insurance Entry

➤ Continued from Page 3

ferred to buy insurance through banks, brokerage firms, or retail stores, according to the Kehrer report.

Indeed, recent polls conducted in California show voters strongly prefer Prop. 100 to Prop. 104. The nonpartisan California Field Poll taken last month showed that as many as 56% of voters approve Prop. 100, while as many as 31% support Prop. 104.

When voters were informed that the insurance industry sponsored the initiative, some 50% said they opposed Prop. 104, and 28% supported it.

Earlier attempts by California bankers to get insurance powers through the Legislature failed. If Prop. 100 passes, it would mark the first time banks have received insurance powers through the initiative process. Initiatives — popular in California — allow a state law or constitutional amendment to be approved directly by the voters.

To help ensure passage of the initiative, the California Bankers Association formed a political action committee that provides donations to the Insurance Consumer Action Network, a consumer interest group that is sponsoring the initiative.

The bankers association also has sent a barrage of information to its members seeking support for Prop. 100. Some member banks are expected to send leaflets on the measure to customers.

Included in the list of association members supporting the initiative are BankAmerica Corp., California First Bank, First Interstate Bank, California First Bank, Security Pacific National Bank, and Union Bank.

Wells Fargo Bank opposes Prop. 100. A bank spokesman said the initiative would impose "stringent" price restrictions on insurance products.

In addition to expanded bank powers, the initiative would reduce auto insurance rates for good drivers by 20% and establish state regulation for future increases. Prop. 104 would establish no-fault insurance and allow auto accident victims to file lawsuits only under certain circumstances.

Also on the California ballot is Prop. 103, which would allow state-chartered banks to sell and underwrite insurance. Bankers oppose the measure, because it would lower auto rates by 20% for one year. Future increases would be approved by an elected insurance commissioner.

The California Bankers Association spokesman called the measure, which is backed by consumer advocate Ralph Nader, "too draconian."

According to the Field poll, Prop. 103 enjoys enthusiastic voter support. Some 62% said they supported the measure, and the rate rose to 74% once they were informed of Mr. Nader's support. ■

NCR Financial Tower System 2.™ The first and only second-generation branch automation system based on industry-standard, open architecture.

But no second-generation open platform would be complete without second-generation workstations.

We offer several. In fact, no one offers more workstation configuration options.

Our Financial Workstations are designed specifically for the financial industry. With exactly the functionality you need for tellers, customer service personnel, and branch management.

They offer industry-standard compatibility in a package that's far smaller and more cost-effective than a standard PC. So you can run standard PC software without sacrificing your valuable workspace.

Our goal in designing these workstations was to provide maximum flexibility by allowing you to configure your workstations to your needs. While allowing for change when it comes. As you know it will.

Choose from a range of industry-standard processors. As little or as much memory as you need. And a wide selection of monochrome or color monitors, printers, and keyboards.

The compact processor unit is designed to fit in a number of convenient locations. On the desk or under it. Wherever it's out of the way.

The result is more power where you need it, in less space for less money. And since they're based on industry-standard processors, these workstations are designed to protect your investment as technology advances.

The workstations are part of a fully-integrated, customer-proven system. Our extensive experience with the financial industry and with branch automation systems lets us offer you a complete solution and complete flexibility, not just technology originally designed for some other task.

And that approach could contribute a lot to the success of your branch automation program.

AN AMERICAN BANKER SURVEY

Top Finance Firms Saw Substantial Merger Activity in 1987-88

▸ Continued from Page 13

$200 million. As a result of that acquisition, Citizens & Southern Commercial Corp., Atlanta, Citizens and Southern's factoring unit, now ranks as the third largest factoring firm in the United States, with gross factoring receivables of $4.2 billion on Dec. 31.

In September 1987, 62d-ranked Concord Leasing Inc., a wholly owned subsidiary of Hongkong and Shanghai Banking Corp., acquired Ingersoll-Rand Financial Corp., Woodcliff Lake, N.J., from Ingersoll-Rand Co. Ingersoll-Rand Financial Corp. ranked 59th among finance companies in 1986, with $91 million in capital funds.

Seventh-ranked Associates Corporation of North America, New York, acquired Fruehauf Finance Co., Detroit, and Transway Finance Co., Savannah, Ga., in May 1987. In last year's survey, Fruehauf ranked 38th, with $241.6 million in capital funds at yearend, and Transway ranked 67th, with $60.8 million.

In February 1987, 55th-ranked New England Merchants Leasing Corp., Boston, acquired McCullagh Leasing Inc., Roseville, Ill., and in March 1987, New England Merchants acquired McCullagh Leasing Ltd., Mississauga, Ontario.

Other Survey Findings

- The financing arms of the nation's largest automobile manufacturers — General Motors Corp., Chrysler Corp., and Ford Motor Co. — again rank as the nation's three largest finance companies. Detroit-based General Motors Acceptance Corp. again tops the list, with $7.4 billion in capital funds on Dec. 31, 1987, up 2.4% from $7.2 billion on Dec. 31, 1986.

Chrysler Financial Corp., Troy, Mich., which in 1986 supplanted Ford Motor Credit Co. as the nation's second largest finance company, maintained its No. 2 ranking, with $4.6 billion in capital at yearend 1987, up 23% from $3.7 billion a year earlier. Ford Motor Credit, Dearborn, Mich., remains in third place, with $3.9 billion in capital, up 20% from $3.3 billion in 1986.

- In 1986, the *American Banker* expanded its survey to include finance companies primarily engaged in leasing. The largest leasing firm in the survey is fourth-ranked General Electric Capital, with $3.5 billion in capital funds and $16.7 billion in net industrial and equipment leasing receivables at yearend.
- Total capital funds at the top 100 finance companies totaled $53.2 billion on Dec. 31, 1987, up 9% from $48.8 billion the year before.
- Total capital funds for the top 100 companies comprised $42.2 billion in equity capital at yearend 1987, up 9.9% from the year before, and $11 billion in noncurrent subordinated debt, up 5.8% from the previous year.
- Thirty captive firms, with $26 billion in capital, and 70 independent or affiliated firms, with $27.2 billion in capital, constitute the top 100 companies.
- Among the affiliated firms, 29 are units of domestic commercial and savings banks, up from 25 in 1986. Three companies are subsidiaries of foreign banks, up from two in 1986.
- Fifteen of the top 100 companies are leasing firms. Those firms — 4 captive companies and 11 affiliated companies — had $6.4 billion in capital funds at yearend 1987.
- Four of the nation's top 100 finance companies changed names last year. The 18th-ranked J.C. Penney Funding Corp., Dallas, renamed itself from J.C. Penney Financial Corp.; 21st-ranked Security Pacific Financial Services Inc., San Diego, changed its name from Security Pacific Finance Corp.; 47th-ranked Advanta Corp., Horsham, Pa., had been named TSO Financial Corp.; and 97th-ranked Banc One Financial Services Inc., Marion, Ind., changed its title from American Fletcher Financial Services Inc. ■

The first complete guide on obtaining and analyzing a corporation's financial information—quickly and effectively

Discovery Techniques: Obtaining & Analyzing Business Financial Data

By Martin Mellman, Steven Lilien and James M. Docherty

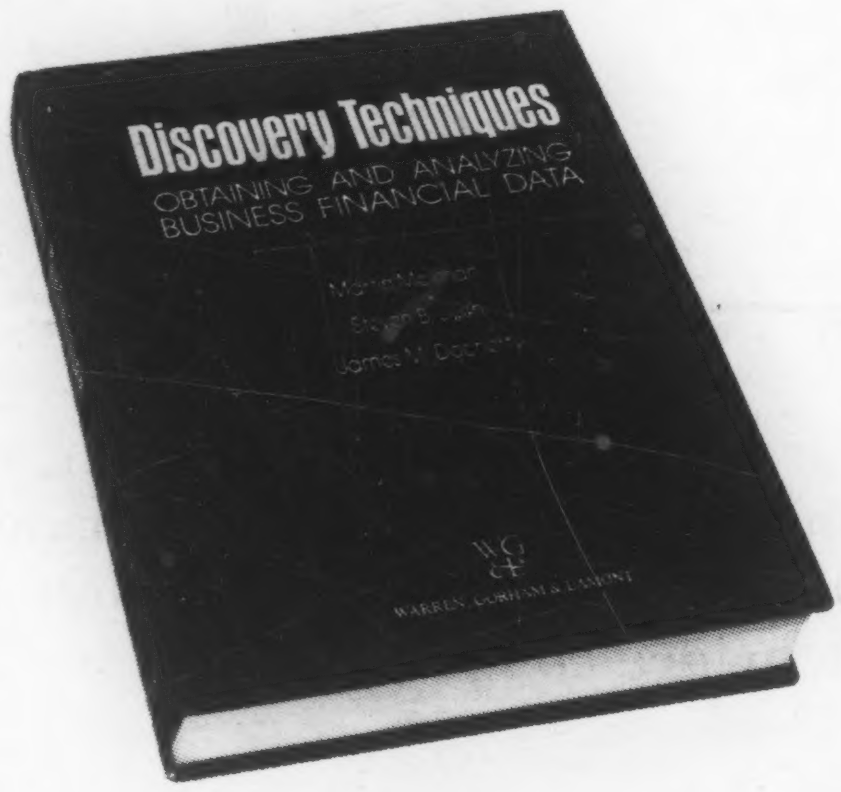
Saves you hours of valuable time as it streamlines the discovery process

When it comes to obtaining and using a corporation's financial information, the greatest time waster is determining what data you need – and where you can find it. But now you can avoid long "fishing expeditions" that tie up your valuable time and force you to sift through hundreds of irrelevant documents in the hope that something useful will turn up.

Written by a team of accounting and legal experts, **Discovery Techniques: Obtaining & Analyzing Business Financial Data** enables you to plan your discovery to accomplish specific results and produce precisely the information you need – quickly and efficiently.

A unique working tool...

Whether you're involved in breach of contract actions... anti-trust and unfair trade practice actions...government regulatory actions...tort claims...product liability cases ...or any other type of litigation that calls for the use of corporate financial data, this volume provides you with the help you need to pinpoint what information is pertinent to your case – and where to get it.



Designed as a practical working tool, it provides you with a detailed "roadmap" to the organization and financial reporting systems of corporations. **Discovery Techniques: Obtaining & Analyzing Business Financial Data** gives you a wide range of charts, checklists, and sample documents that lead you through the organization of corporate functions and tasks...what reporting systems look like and how they work...specific documents and data you need in specific practice situations – and how to get them.

Data Source: American Banker questionnaire sent to commercial and consumer finance companies and leasing companies. **Total Capital funds** consist of stockholders' equity and non-current subordinated debt. Non-current means that there is a remaining maturity of one year or more. Minority interest is excluded. **Equity capital** is the shareholders' equity portion of total capital. Stockholders' equity is the sum of capital plus surplus. **Receivables** include direct loans and paper purchased from manufacturers, wholesalers, and retailers. **Receivables Net** exclude unearned income and loan-loss reserves. **Net income** is income after taxes but before extraordinary items. **Deferred income**, or unearned discounts, is the sum of prepaid interest on loans outstanding. **Receivables acquired** are gross receivables acquired during the year. **Bank credit** is bank credit lines available plus in use. Please note that many bank-related finance companies report zero for bank credit lines because they are funded by their parent company. **(b)**— Year ending on date other than Dec. 31. **(c)**— Current year's figures are for a date different from preceding year. **(g)**— A subsidiary of a domestic commercial or saving bank organization. **(m)**— Foreign bank-related. **(R)**— Revised since publication on June 10, 1987. **(r)**— Rank firm would have had, if revised data had been used. **(†)**— Rank firm would have had, if it had been included in survey. **( )**— Indicates a loss. **N.A.**— Not available.

Data Sources: *American Banker* finance company survey questionnaire, whenever possible. However, the data for "Industrial and Equipment Leasing — Bank-Related" were provided by ADP Data Services Division, New York, from their data base of bank holding companies reporting to the Federal Reserve Board on Form Y-9. Also, factoring data from the *Daily News Record*— a textile trade newspaper based in New York— were used for factoring firms not responding to this year's survey. **Please note:** the consumer, commercial, and non-bank related lists shown above may be incomplete because break downs for several of the large firms were not available. **Net receivables** are broken down into three operational types: consumer-retail and real estate, which includes home equity loans; commercial-industrial; and industrial and equipment leasing. Industrial and equipment leasing are broken down into two groups— nonbank and bank-related. Data for bank-releated leasing firms are not available. Therefore, total leasing receivables at the bank and all its subsidiaries are reported. These are the data from ADP Data Services Division. Factoring receivables or "volume" are reported gross. For some companies it is not possible to net out unearned discount and loan loss reserves by type. For these companies, therefore, the sum of the net receivables shown above may exceed total net receivables reported in the "Top 100 Finance Companies" listing. Complete definitions of these four operational categories appear in a story accompanying the tables. **(g)**— A subsidiary of a domestic commercial or savings banking organization. **(l)**— A leasing company. **(m)**— Owned by a foreign commercial banking organization. **(n)**— Includes Chemical Business Credit which was acquired from Chemical Banking Corp. at yearend 1987. **(o)**— BT Factors is a division of Bankers Trust Co., New York. **(†)**— Factoring data are from the February 26, 1988, *Daily News Record*.

Descriptions and Definitions

By L. MICHAEL CACACE

The *American Banker's* 38th annual survey of the finance industry is presented in seven tables:

- The main listing consists of the 100 largest firms in order of their total capital funds as of Dec. 31, 1987. Total capital funds for 1986 are also shown, along with the 1986 capital funds rank and gain in rank. The other yearend 1987 data shown in this table are capital and surplus; net receivables; total assets; net income; deferred income; gross receivables acquired; and bank credit lines available plus those in use.
- *American Banker* also lists the top 50 finance companies in total assets. The companies are listed in order of their yearend 1987 assets. Also shown is the Dec. 31, 1986, total asset figure and the percentage change in assets from 1986 to 1987.
- *American Banker* lists the top 50 finance companies in net income. The companies are listed in order of their 1987 net income. Also shown is the 1986 net income and the percentage change in net income from 1986 to 1987.
- Another table lists the captive finance companies in the survey in order of total capital funds. **Captive companies** are those whose main function consists of financing sales of their parent firm's product or services. This year there are 31 such companies in the listing.
- A separate table lists the top independent or affiliated finance companies in the survey in order of their capital funds. **Independent companies** are not owned by other companies. **Affiliated companies** are subsidiaries of other companies but are not captives. This year there are 93 such companies in the listing.
- There is a listing of domestic commercial and savings bank-related finance companies and of foreign bank-related finance companies with capital funds of $5 million or more. Included in this table is the name of the parent banking company. By definition, bank-related companies are affiliated companies and appear on the listing of independent and affiliated companies.
- Another table breaks down the receivables outstanding at a finance company into four types: consumer, commercial, leasing and factoring. The top 10 firms in each category are identified. In this case of leasing companies there are two lists: the 10 largest nonbank-related companies and the 10 largest bank-related companies. Consumer, commercial, and leasing receivables are reported net of loan losses and earned income, wherever possible, and are for Dec. 31, 1987. The factoring receivables are reported gross and represent the volume of business for the entire year 1987. Complete defintions are listed below.

The definitions used by *American Banker* for the listings described above are listed below.

Total capital funds is the sum of stockholders' equity and noncurrent subordinated debt. Stockholders' equity is the sum of capital plus surplus. Noncurrent subordinated debt is subordinated debt with a remaining maturity of more than one year.

Receivables include direct loans and paper purchased from manufacturers, wholesalers, and retailers. **Gross receivables** include unearned income and reserves for loan losses, while **net receivables** exclude unearned income and loan-loss reserves.

Net income is income for the entire year after taxes but before extraordinary items.

Deferred income is another term for **unearned discounts.** It is the sum of prepaid interest on loans outstanding.

Bank credit lines are the sum of bank credit available plus in use. For bank-related finance companies, the bank credit line is often reported to *American Banker* as zero or not applicable, since these companies are usually funded by their parent. We report zero in this category for all bank-related companies reporting "not applicable".

Consumer-retail and real estate receivables are those obtained through the financing of the consumer through direct cash loans or through the purchase of installment sales paper from dealers and retailers. Most of the real estate receivables are **home equity loans**, which are personal loans secured by second mortgages.

Commercial-industrial receivables are those obtained through the financing of small and medium-size businesses, including agribusinesses, through secured short-term loans. In most cases, a firm offers its accounts receivables as security, and the lending arrangement is called "accounts-receivable financing." Inventories or plant equipment also may be used as collateral.

In addition to the short-term accounts-receivable financing, businesses also receive funds on longer-term installment receivables by selling them to finance companies. These are industrial-sales finance transactions.

Industrial/equipment leasing is a type of asset-based lending where the lender owns the physical asset to be financed. Generally, longer term fixed assets are financed by finance companies via leasing.

Factoring is a type of asset-based lending where the lender buys the borrower's receivables and extends funds before their collection. The factor usually collects the receivables on a nonrecourse basis.

Worth Repeating

I don't think the regulators would know a drug transaction if it hit them in the face.

William von Raab, commissioner of the U.S. Customs Service, on the lack of support from banking regulators during the BCCI money laundering probe. [Page 1]

Acerbic Customs Chief Blasts Regulators

By JIM McTAGUE
Washington Bureau

WASHINGTON — Zero. That's how much help William von Raab said his undercover agents got from bank regulators during their money-laundering probe of BCCI Holdings of Luxembourg and its U.S. banks.

"I don't think the regulators would know a drug transaction if it hit them in the face," said Mr. von Raab, the razor-tongued commissioner of the U.S. Customs Service.

"Apparently, they are spending all their time defending the banking industry. I have never gotten a single call from a banking regulator. None. Zero.

"The last banking regulator I dealt with was — what is his name? — the comptroller of the currency . . . Todd Conover. After that, I can't even tell you the name of the [current] comptroller of the currency."

Mr. Conover resigned as comptroller in 1985.

When Mr. von Raab talks about drug deals and money laundering, bankers cringe. In their eyes, he's vicious. A truncheon-mouthed regulator with a mean-spirited penchant for exaggerating their industry's guilt.

William von Raab

"This is that typical nonsense where the banking industry hears someone say something adverse about some of its members and they think it's an attack on the entire industry."

What he is saying is that with an estimated $110 billion in drug money being laundered in the U.S. each year, and with up to $90 billion of that total being wired overseas, some bankers out there know what's going on.

"Do you know what $110 billion looks like? It weighs two million

Banks Look Inward For Wrongdoing

By PHILIP T. SUDO

NEW YORK — Despite spending more money on more systems and more awareness, the banking industry still has a problem with money laundering — its own people.

Recent efforts to deter money laundering have succeeded to the point where corporate security officers say that criminals need an insider to cleanse their ill-begotten riches. As banks sharpen their strategies to keep illegal money from coming through the front door, the back door — checked only by the integrity of bank officials — has become the greatest area of vulnerability.

Public concern over that vulnerability increased this month with the indictment of BCCI Holdings and nine of its officials on money laundering charges in Tampa, Fla. The indicted officials, executives of the Luxembourg-based Bank of Credit and Commerce International SA, were charged not only with helping members of Colombia's Medellin drug cartel launder money, but also with suggesting laundering schemes.

William von Raab, U.S. Customs commissioner, seized the occasion to accuse bankers of a "sleaze factor" in their ranks. For an industry whose public image has been battered by problem loans and record failures — and whose reputation for trust and integrity is integral to doing business — the commissioner's remarks put many bankers on edge.

But some acknowledge that the battleground is indeed shifting.

"We're more concerned about this issue from an internal standpoint now," said a security official at a major

Top Mortgage Servicers Up 17%

By PHIL ROOSEVELT

NEW YORK — The servicing portfolios of the top 300 mortgage companies jumped 17.1% in the year ended June 30, despite a sharp drop in mortgage originations nationwide, an *American Banker* survey shows.

The biggest gainer was Independence One Mortgage Co., Southfield, Mich., which increased its portfolio more than threefold, to $8.2 billion. The gain boosted the unit of Michigan National Bank to No. 21 among mortgage companies from No. 70.

Another impressive gain was posted by Chase Home Mortgage Corp., Tampa, Fla. Its portfolio ballooned by 150%, to $11 billion, lifting its parent, Chase Manhattan Corp., to No. 14 from No. 34 on a master list of servicers. This list combines servicing for investors by affiliated banks, thrifts, and mortgage companies.

The overall gains came against a backdrop of rising interest rates and a 30% decline in originations by all lenders. At $369 billion, however, the originations were still robust by historical standards and included far fewer refinancings than the previous year's total. Refinancings produce no net gains in servicing.

Servicing, long the most profitable part of mortgage banking, entails funneling monthly payments from borrowers to investors and performing other administrative chores. Servicers typically earn annual fees of about 45 basis points on the loan amounts.

As in the past, the big gainers for the

Trust Professionals Get No Respect from CEOs

By DR. PAUL S. NADLER

WHAT'S the key fact you learn when you bring in 20 top trust people to talk about the future of their sector of the banking industry?

"They want respect. They feel they are the Rodney Dangerfields of banking," is the way Allen Lipis and Harold Bell, executive vice presidents of Bank Earnings International, put it after holding a two-day meeting to plan a study on the future of trust.

In talking to Lipis and Bell about their study, which is being sponsored by 55 organizations, I cannot help but think of the old definition of a bank:

A bank is like a car. The CEO is driving; next to him is the loan officer saying, "Go left." Next to him is the investment officer saying, "Go right." Lying on the floor with his hand on the gas is the marketing officer, and next to him with his hand on the break is the operations officer.

Lying on the floor in the backseat is the comptroller yelling, "Stop the car, I want to take it apart." In the middle of the backseat looking out the rear window is the market research officer saying, "I can see the road clearly — let me steer."

In the left corner of the backseat is the consultant saying, "Pay me some money, and I'll tell you what I think is wrong with the car, but I won't fix it myself." And, finally, sitting on the far right is the trust officer, fast asleep.

But the Bank Earnings International meeting, held in Atlanta late last month, shows that the trust officer has woken.

Nadler Says:

'Trust departments have to learn to sell. This is obvious when you talk to a new widow or middle-class person who desperately needs good financial advice.'

He earns a 50% to 60% pretax profit margin, handles vast sums (national bank trust departments hold $2.3 trillion of assets according to Lipis and Bell), and yet feels the CEO doesn't know he exists. Furthermore, the CEO doesn't realize the opportunities in trust or the threat from investment firms, CPAs, investment advisers, and insurance companies.

Moving Off the Back Burner

Here is a banking industry that needs more noncredit income and needs services that earn a return without tying up expensive and hard to get capital. In sum, an area that is just the ticket for better performance banking. Yet trust remains on the back burner.

What can be done?

First and foremost, the advance planners for the Bank Earnings International study say that trust departments have to learn to sell. This is obvious when you talk to a new widow or middle-class person who desperately needs good financial advice.

When has a bank ever gone to newly widowed or divorced customers who have had joint bank accounts for years and who are changing to single accounts? When has it informed them that the trust department exists and can do a good job of protecting their assets?

Think of the story they could tell. For the bank can usually do a far superior job to a brokerage firm for them since the latter has a vested interest in selling securities and the salesman's commission is a major consideration.

After Black Monday, did the bank or its trust department advertise the safety of trust management or bank accounts in general?

True, the Comptroller of the Currency does not let bank trust departments advertise their results, but they sure can advertise their goals and methods and their dedication to the preservation of their customers' capital.

So trust officers believe they must develop a sales culture. They have to switch from being order takers and reward those who generate business.

They feel that trust departments must develop productivity and performance standards and that they must learn to price their services more profitably.

Look at the talent in the trust operation. A trust department must have legal talent, tax and accounting talent, investment knowledge, an ability to hold the hands of those in need, and an ability to preserve capital. The average citizen finds it extremely difficult to get all this combined in one location.

Charging More for Services

Thus, trust officers say they will have to charge for advice by the hour (like lawyers), charge more than 1% of assets for management (remembering that brokerage firms collect upwards of 3% of the client's funds when they develop fancy mutual funds and other packages as investment vehicles), and otherwise receive better compensation for the hundreds of years of skill and experience invested by the typical trust department's personnel.

One painful conclusion of the group is that many banks will have to change the people in their trust areas. They will have to get rid of those who look at trust as a safe haven from competition and salesmanship and go after people who can do a better job of crowing about what trust has accomplished in the past and what it can do in the future.

"Bankers are usually uncomfortable in raising prices," Lipis and Bell explain. "But raising them does give them the opportunity to tell what they are doing and brag about what they have done."

Most important, we're entering an era in which investment conservatism is replacing a go-go attitude that all investments will do well.

The brokers who thought they were geniuses because all their recommendations went up until Black Monday have learned that markets go both ways and that in investing you either eat well or sleep well.

So here we are. The Bank Earnings International focus group says that trust is unappreciated, that the CEO doesn't even know it exists, and yet that the changes that have already been made in pricing and systems are making trust one of the most profitable areas of the bank and the main depositor in most banks to boot.

To outside observers it looks as if this is another instance in which we look all around for new opportunities only to find that one of the best is waiting, fresh and ready to be useful after many years of napping in the backseat of our banking car. ■

Something to Say? We Want to Hear

The *American Banker* welcomes letters, comments, and observations from you, our readers, on issues that interest and are important to you.

We would like our pages to reflect as wide a range of views and opinions as possible — no matter how provocative or controversial. The key goal is to factor your views into our own thinking so that both our newspaper and the executives who read it can do a better job.

In addition, we would like to read your responses to the points of view expressed by our columnists and guest writers. Are they on target? Who's right or wrong? What's your own opinion?

Wherever possible, we would like to print your comments. Please direct them to the editor, William Zimmerman, American Banker, One State Street Plaza, New York, N.Y. 10004 and include a daytime phone number. Letters may be edited for reasons of space and clarity.

MEMORY BANK

The following quiz is based on material that appeared in last week's issues of the American Banker. Answers are on page 12.

1. For what purpose was the Japan Bankers Association Investment Inc., a Cayman Islands corporation, set up in March 1987 by 28 Japanese banks?

2. Despite vigorous opposition from foreign and domestic interest groups, the Senate voted 85 to 3 to adopt an amendment to its $2.6 billion antidrug legislation sponsored by John F. Kerry, D-Mass., and Mitch McConnell, R-Ky. How does this amendment propose to curb narcotics-related money laundering beyond U.S. borders?

Commercial Lending

3. A survey by Robert Morris Associates, the national association of bank loan and credit officers, identified the industry in which commercial banks charged off the largest amount of loans in 1987, more than $560 million. Was this negative leadership position claimed by real estate, energy and mining, or restaurants and bars?

4. Voters in California, the Golden State that gave the world Proposition 13 and President Ronald Reagan, will decide the fate of Proposition 100 on Election Day. Passage of this measure is so important to the California Bankers Association that the trade group had raised $525,000 by mid-October for its lobbying effort. What power would this proposition grant to California's state-chartered banks?

Operations/
Technology

5. The popularity of in-house computer systems versus service bureau arrangements at banks with less than $250 million in deposits is tracked in the 1988 update of "Automation Trends in the Community Bank Sector," previewed for this newspaper by Arthur M. Gillis, president of Computer Based Solutions Inc., New Orleans. Based on Mr. Gillis's study of 13,000 community banks, is the use of service bureaus rising or falling?

6. What segment of the market expresses the strongest interest in buying financial planning services from a bank, according to the *American Banker*'s fifth annual survey of "How Consumer America Views the Changing Financial Services Industry?"

7. Dairy farmer Neal Boge had a grievance in 1986 against the Tillamook branch of the U.S. National Bank of Oregon. Mr. Boge believed the bank treated him unfairly when it repossessed his herd of gentle cows to satisfy a note on which $116,000 was past due. A jury in Tillamook agreed with Mr. Boge when it awarded him nearly $200,000. What action did Mr. Boge take with a herd of 103 dairy cows in mid-1986 to call attention to his plight?

8. Chemical Banking Corp. has donated the use of 5,000 square feet of its New York office space for the collection of donations from the public and businesses to what worthy cause?

Top 300 Mortgage Firms Post 17% Gain in Servicing Portfolios

➤ Continued from Page 1

year ended in June advanced chiefly through the purchase of servicing rights from other lenders or through acquiring entire companies.

Richard Bondi, president of Independence One, said originations accounted for less than 10% of his firm's $5.8 billion gain. The rest came through several bulk purchases of servicing rights from other lenders.

"We were aggressive buyers, and we are still aggressive buyers," he said. "There's a lot of servicing on the market, and we feel it can be gotten at some very good values."

Chase Home Mortgage posted its $6.6 billion gain through a combination of company acquisitions, purchases of servicing, and its own originations. The company is the main servicing unit of Chase Manhattan Corp.

Chase Home Mortgage president Fred Koons said the parent firm hopes to rank in the top five on the master list of combined servicing within the next few years. He said additional economies of scale lie ahead.

> 'We want to be the best, not the biggest. But you have to have significant size to be the best.'
>
> — Fred Koons
> President, Chase Home Mortgage

"We want to be the best, not the biggest," Mr. Koons said. "But you have to have significant size to be the best."

Meanwhile, an extraordinary servicing transaction took place in September — after the reporting period ended — when Mellon Bank Corp., Pittsburgh, sold the servicing on $6 billion of residential mortgages to Salomon Brothers Inc.

The long-rumored transaction was confirmed last week in a Mellon earnings report; the sale resulted in a one-time gain of $21 million.

Mellon officials said Salomon plans to resell the rights, and that Mellon in the meantime will continue to do the servicing work for Salomon. Salomon officials could not be reached for comment.

Richard Solheim, president of the unit that oversees Mellon's four mortgage banking units, said the sale still leaves Mellon with about $4 billion of residential servicing.

"Mellon is staying in mortgage banking," he said.

He described the effort as the beginning of an attempt to consolidate the four mortgage companies. The companies are located in Cleveland, Denver, Houston, and New Orleans.

"Moving things together is easier to do when the size is smaller," he said.

In the survey, the largest decline in servicing by a mortgage company was the 73% drop by 160th-ranked Pacific First Mortgage Corp., Walnut Creek, Calif. It declined to $953 million at midyear from $3.5 billion in June 1987. The drop was attributable to the sale of its Walnut Creek servicing operations to Commonwealth Mortgage Corporation of America, Houston. Pacific First Mortgage Corp. is a subsidiary of Pacific First Federal

Citicorp on Top

In other survey findings:

- Citicorp remained on the top of the master list of combined servicing, with a whopping $45.6 billion. Fleet/Norstar Financial Group, Providence, R.I., edged out GMAC Mortgage Co., Elkins Park, Pa., for the No. 2 spot.
- Among mortgage companies, Citicorp Mortgage Inc. — a St. Louis operation that handles all of Citicorp's servicing for investors — retained the top spot that it first grabbed in rankings for yearend 1987. Previously, the unit did not report its servicing. GMAC Mortgage ranks No. 2 on the new list, followed by Dallas-based Lomas & Nettleton Financial Corp.
- Gaithersburg, Md.-based Standard Federal Savings and Loan Association, described as an especially aggressive purchaser of servicing, nearly unseated City Federal Savings Bank, Bedminster, N.J., as the top thrift in servicing for investors.

Standard Federal boosted its portfolio nearly threefold, to $15 billion. It broke into the top 10 on the master list of combined servicing. Officials at the thrift declined to return repeated calls for comment.

- Bank of America, San Francisco, held the lead among banks in servicing, with $3.9 billion. Security Pacific National Bank, Los Angeles, held on to No. 2 with $3.3 billion.
- Five companies reported too late to be included in today's listing of the top 300 mortgage companies. Listed in order by the amounts in their servicing portfolios on June 30, 1988, they are: Connecticut National Mortgage Co., West Hartford, Conn., with $3.1 billion in servicing for investors; E.B. Mortgage Corp., Annapolis, Md., with $710 million; Corstan Inc., Las Vegas — formerly known as Stanwell Mortgage, Concord, Calif. — with $550 million; Citizens Mortgage Service Co., Jenkintown, Pa., with $278 million; and SW Mortgage Inc., Vista, Calif., with $221 million.
- Two companies in today's listing, submitted corrected data that were also received too late. Seafirst Mortgage Corp., Seattle, had $3.6 billion in servicing on June 30, and not $1.7 billion as originally reported. And TCF Mortgage Corp., Minneapolis, had $1.86 billion in servicing, not $704 million as originally reported. Both firms, therefore, should not appear on the summary table on page 18 that identifies the 10 mortgage companies with the largest declines in servicing.■

Master servicing is a cinch once you've mastered senior/subordinate multi-class mortgage pass-through REMICs with shifting interests.

At National Mortgage, we're ready to handle the most complicated transactions.

That's why we're currently the master servicer for two publicly-held REMICs. Our experienced personnel and sophisticated technological capabilities have enabled us to work with some of the nation's top investment bankers.

And we're always eager to tackle more. Which explains our emergence as one of the largest independent, privately-owned mortgage companies in the United States.

So when you need a master servicer or loan servicer on your next mortgage-backed securities transaction, give Joel Katz a call at (901) 362-1171. We'll come in with a good price.

And, more important, proven mastery of the subject.

Data Sources: American Banker questionnaire to top 600 mortgage companies and commercial banks in servicing for investors and Federal Home Loan Bank Board data on servicing by FSLIC-insured thrifts. **ADP Data Services Division, New York,** provided the thrift data. **Description of Table:** A listing of the top 25 firms in the mortgage industry. The listing includes mortgage companies, commercial banks, and thrifts. For firms with more than one subsidiary engaged in servicing mortgages for others, a combined servicing figure for all of these subsidiaries is used, and the name of the parent company is shown in bold type. **(a)—** Data for June 30, 1987, are for Fleet Financial Group, Inc. On 1/1/88, Fleet Financial Group and Norstar Bancorp., Albany, N.Y., merged to form Fleet/Norstar. The four mortgage servicing subsidiaries are: Fleet Real Estate Funding Corp., Florence, S.C.; Fleet Mortgage Corp., Milwaukee, Wis.; Norstar Mortgage Corp., Westbury, N.Y.; United Bank & Trust Co., Hartford, Conn. Data for a fifth subsidiary, Fleet National Bank, Providence, R.I. were not available. **(b)—** The two mortgage company subsidiaries are: Metmor Financial Inc., Los Angeles, and MetFirst Financial Co., Overland Park, Kansas. **(c)—** The data for June 30, 1987 were for Kissell Co., Springfield, No., and CityFed Mortgage Co., a division of City Federal Savings Bank, Elizabeth, N.J. Kissell Co. and CityFed Mortgage merged to form CityFed Mortgage, Bellvue, Wash., during the latter half of 1987. June 30, 1988, data for CityFed Mortgage were not available. Therefore, FHLBB data for its parent, City Federal Savings Bank, were used. **(d)—** The two mortgage company subsidiaries are: Sears Mortgage Corp., Riverwoods, Ill., and Coldwell Banker Real Estate Financial Services, El Segundo, Calif. **(e)—** The two mortgage company subsidiaries are: Shearson Lehman Hutton Mortgage Corp., Irvine, Calif. and The Balcor Co., Skokie, Ill. The latter company, which was acquired by Shearson on July 1, 1982, is included in the survey this year for the first time. Shearson Lehman Hutton Inc. is an American Express Co. **(f)—** Its three mortgage servicing subsidiaries are: Chase Home Mortgage Corp., Tampa, Fla.; Chase Lincoln First Bank NA, Rochester, N.Y.; and Chase Bank of Arizona, Scottsdale. **(g)—** The seven mortgage servicing subsidiaries are: First Interstate Mortgage Co., Pasadena, Calif.; First Interstate Bank of Oregon NA, Portland; First Interstate Bank of Washington NA, Seattle; First Interstate Bank of Casper NA, Wyoming; First Interstate Bank of Arizona NA, Phoenix; First Interstate Bank of Nevada NA, Reno; and First Interstate Bank of Englewood NA, Colo. **(h)—** The Federal Home Loan Bank Board is in the final stages of selling the insolvent $30 billion-asset thrift to a group of investors led by Texas billionaire Robert M. Bass. **(i)—** Two mortgage company subsidiaries providing data for this year's survey are: Mellon Financial Services Corp. #7, New Orleans and Mortgage & Trust, Inc., Houston. Its other mortgage company subsidiary, Mellon Financial Services Corp. #8, Cleveland, which had $3.1 billion in servicing on Dec. 31, 1987, declined to participate in the survey. Another mortgage company subsidiary, Mellon Financial Services Corp. #9, Denver, which had a $1.8 billion servicing portfolio in June 1987, according to the **Mortgage Bankers Association Directory,** has chosen not to participate in the survey for the past two years. **(j)—** The two mortgage company subsidiaries together are called "Meritor Mortgage Group" and consist of: Meritor Mortgage Corp-West, Orange, Calif. and Meritor Mortgage Corp-East, Philadelphia. On April 1, 1988, it sold it's third mortgage company, Meritor Mortgage Corp.-Central, St. Paul, Minn., to Knutson Mortgage Corp., Bloomington, Minn. **(k)—** The three mortgage servicing subsidiaries are: Bank of America NT&SA, San Francisco; Seafirst Mortgage Corp., Seattle; and BA Mortgage & International Realty Corp., San Francisco. The latter chose not to participate in the survey.

Data Source: American Banker questionnaire to the top 200 commercial banks in mortgage servicing. **Description of table:** A ranking based on mortgages serviced for investors on June 30, 1988. The table identifies the 100 largest commercial banks responding to the survey. **Mortgages Serviced for Investors:** The dollar volume of permanent commercial and residential real estate mortgages serviced for investors. Excludes home improvement loans and all temporary financing, such as construction and development loans. Also excludes mortgages serviced for itself and for all accounts of the bank's trust department. **Number of Mortgages**: are the number of loans associated with the volume reported. **Number of Investors Excluding Pools:** includes depository institutions such as thrifts and banks, pension funds, insurance companies, etc. **Number of Pools:** The sum of GNMA pools, FNMA pools, and FHLMC pools. **Total Mortgages Serviced by Bank:** Total dollar volume of permanent mortgages serviced by the bank: for itself, for its trust department, and for investors. **Mortgages Owned by the Bank:** The dollar volume of permanent mortgages which are assets of the bank. **(a)**— Servicing is done by Citizens Fidelity Mortgage Co., a division of the bank. **(R)**— Revised since publication on November 13, 1987. As a result of revision, the bank did not rank among the top banks in servicing of permanent mortgages on June 30, 1987. **(r)**— Rank firm would have had, if revised data had been used. **N.A.**— Not Available.

Data Source: The Quarterly Financial Report to the Federal Home Loan Bank Board. **ADP Data Services Division, New York,** provided the data. **Description of table:** A ranking based on mortgages serviced for investors on June 30, 1988. The table identifies the 100 largest savings institutions required to report to the FHLBB (mostly FSLIC-insured institutions). **Mortgage Loans Serviced for Others** are the total of all unpaid principal balances of all whole loans and participating interests in loans serviced by an institution but owned by others at the close of the period, whether or not originated by the institution. **Loan Servicing Fees** are the fees earned— as a result of the servicing for others of loans or participations therein— during the 12-month periods ending on June 30, 1988, and June 30, 1987, respectively. The 12-month servicing fees are calculated by summing the fees earned in each of the four quarters of the period. **N.A.—** Not available. **Please note:** This list includes thrifts that service mortgages for investors directly as well as those thrifts that service mortgages for investors through their mortgage company subsidiaries. That is, the FHLBB data are consolidated data for the thrift and its mortgage subsidiaries.

Big Banks Expect Fed to Grant New Powers, but Fear Limits

By **BARBARA A. REHM**
Washington Bureau

WASHINGTON — Bankers stalking the Federal Reserve are confident of winning wider powers to underwrite securities, but they worry that Fed governors will bog down their approvals with new restrictions.

The Fed was flooded with applications this week as more banking companies boarded the bandwagon to gain expanded securities underwriting powers.

Citicorp, J.P. Morgan & Co., and Security Pacific Corp. joined Chase Manhattan Corp. and Bankers Trust Corp. in pursuit of new underwriting powers. Manufacturers Hanover Corp., Chemical Banking Corp., and Marine Midland Banks Inc. plan to submit applications in the next several weeks, according to spokesmen.

Individual powers are being requested in separate applications. This strategy, bank spokesmen explained, was adopted so that the more controversial items, such as plans to underwrite corporate equities, will not slow down Fed approval of corporate debt underwriting — the first new power the banks expect to receive.

"We anticipate that some of the applications will raise fewer questions than others," said Robert Tortoriello, a lawyer with Cleary, Gottlieb, Steen & Hamilton, New York, who represents Security Pacific. "Debt securities will move on the fastest track."

As reported earlier, Chase asked the Fed for authority to underwrite and deal in corporate debt and preferred stock. Bankers Trust added corporate equities to that list. Morgan requested the power to underwrite corporate

Bid for Options Exchange Revived

Units of Security Pacific and Citibank Apply to SEC

By **JED HOROWITZ**

NEW YORK — A year after Security Pacific Corp. abandoned a controversial plan to operate an options trading and clearing system, a group that includes a unit of the California company and a Citibank unit is embroiled in another fight to revive the plan.

The group consists of RMJ Securities Corp., a government securities broker once owned by Security Pacific; Security Pacific National Trust Co.; and Capital Markets Assurance Corp., a Citibank unit that issues financial guarantees on corporate securities.

The system, which goes by the name Delta Government Options Corp., has applied to register as a clearing agency with the Securities and Exchange Commission. The new company plans to issue options that will be traded over the system by primary dealers of government securities and other large traders.

Critics of the plan — the member-owned options exchanges and their clearing corporations — say the arrangement is a charade. They argue that Delta is a front for Security Pacific and RMJ, which are again trying to evade regulatory requirements by refusing to register with the SEC.

"It's really the Veg-O-Matic approach to regulatory oversight," said Mark Young, a Washington-based attorney representing the Chicago Board of Trade. "You slice and dice what ap-

Giant Thrift Moves to Exit FSLIC Fund

Great Western Bid to Join FDIC Will Face Obstacles

By **ROBERT LUKE**

LOS ANGELES — Great Western Financial Corp., the nation's second largest thrift company and one of the best capitalized, moved on Wednesday to have the deposits of its huge California thrift subsidiary insured by the Federal Deposit Insurance Corp.

The move, which faces legal, regulatory, and political hurdles, further jeopardizes the future of the ailing Federal Savings and Loan Insurance Corp. and calls into question the necessity of having a separate thrift industry, analysts said.

"This is, at minimum, a very important symbolic gesture," said Eric Hemel of First Boston Corp., New York.

Greenspan on FSLIC Aid: Page 15

Great Western, with assets of more than $31 billion, announced on Wednesday that it has filed applications to merge its principal subsidiary, Great Western Bank, into its Washington State subsidiary, Great Western Savings Bank, which last month converted to FDIC membership.

The Washington unit remains a member of the Federal Home Loan Bank System.

Great Western Bank, based in Beverly Hills, Calif., is the nation's third largest thrift, with assets of $28.1 billion at midyear. The institution is FSLIC insured and operates 263 branches in California, Florida, and Arizona.

The holding company, also based in Beverly Hills, said it made the move for economic reasons.

Fed Adopts Fees Aimed at Wider Profit Margins

By JEFFREY KUTLER

NEW YORK — The Federal Reserve Board adopted new fee schedules on Wednesday that it expects will significantly widen the profit margin on services the Federal Reserve System provides to financial institutions.

Most of the increase in the profit margin — to 3.4% of anticipated 1989 revenue from 0.5% in 1988 — was arranged in June, when the Fed changed its prices on check collection services to conform to the check-hold rules known as Regulation CC. About three-fourths of the central banking system's costs and revenues from priced services come from the check collection area.

But in taking further pricing actions Wednesday, the Fed Board said it expected increases in revenue next year from four of five other service categories. In the one category where revenue would fall — safekeeping and noncash collections — the profit margin would improve to a 0.8% loss in 1989 from a 2.7% loss this year.

When all the pricing changes in six service categories are added together, the Fed projects a 6.6% increase in revenue for 1989 to $707.8 million. The percentage increase is three times the 2.2% that the Fed projects it will register in 1988.

Costs are seen rising at a slower rate than gross income — 3.7% to $684.9 million in 1989. Costs increased 5.3% in 1988.

The costs include a "private sector adjustment factor," which is designed to make the Fed's overhead comparable to that of its private-sector competitors. The Fed also plans to spend $4.3 million on research and development projects in 1989, up from $2.3 million in 1988 — figures that were not incorporated in profit estimates prepared by the staff for presentation at the Wednesday board meeting.

The Fed's profit — revenue minus cost — would grow to $24.9 million in 1989 from $3.3 million in 1988. Although that is a whopping 755% increase, it brings the income figure closer in line with Fed performance in earlier years. In 1987, for example, revenue exceeded costs by $22.4 million, in 1986 by $28.4 million. And the profit margins, in percentage terms, were higher in proportion to total revenue.

Service Prices Mandated by Law

The Fed offers payment and processing services on a priced basis as mandated by the Monetary Control Act of 1980. Profits from these services are a small fraction of what the central bank earns from other aspects of its operations as a fiscal agent of the U.S. government. The central bank contributed $17.7 billion in profits to the Treasury last year, most of it interest income on U.S. government securities.

The Monetary Control Act specifies that the Fed must recover its overhead costs, including the private sector adjustment factor. The Fed measures its success in terms of a "cost recovery rate." If revenue matches costs, which is the goal, the recovery rate is stated as 100%. The Fed staff said that "since 1984 [when the rate was 107.8%], the system has made substantial progress in moving closer to its target of 100% recovery."

The recovery rate anticipated for 1989, 103.4%, can also be expressed as a 3.4% profit margin.

In the commercial check field, where the Fed earns most of its service

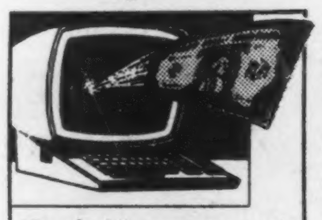
Treasurers Take Banks to Task

Clearer Invoices Sought by Cash Management Group

By YVETTE D. KANTROW



Cash Management

DALLAS — Banks looking for new ways to differentiate themselves in the cash management arena may want to consider improving the invoices they send their customers. This sentiment was expressed here this week by attendees of the National Corporate Cash Management Association's annual conference.

"There appears to be an opportunity here for banks to make a lot of people happy" by electronically transmitting detailed and comprehensible invoices to their corporate customers, said George Rush, of Phoenix-Hecht, a treasury management consulting firm in Northfield, Ill.

Mr. Rush told a standing-room-only crowd of treasurers on Tuesday to insist that their banks provide clear and timely account-analysis statements.

"Don't underestimate your own corporate power," he said. "Talk to your bank."

While many banks provide their customers with account-analysis statements, these are problematic for treasurers, Mr. Rush said. The most common complaint, he said, concerns the lack of consistency in terminology and formats from bank to bank. This makes it hard for treasurers to review exactly what they are being charged for.

But when treasurers do carefully examine their statements, they often discover errors in favor of their banks, Mr. Rush said.

Mr. Rush's statement hit many nerves in his audience of corporate treasurers. Attendees volunteered to relate stories about the bank errors they have discovered in their invoices.

"Our bank initiated some new services that they never mentioned charging us for," one attendee said. "After looking at our statements, we realized we were being charged $50 a month for that new service."

The corporations are also unhappy that some banks offer statements only on paper, rather than in electronic form. Paper invoices often arrive late, and treasurers find it difficult to reconcile the statements with internal records, he said.

Many of the corporations' complaints about bank invoices are valid, said Michael Curran, a vice president at Manufacturers Hanover Trust Co., New York. Bank invoices can be cumbersome and hard to understand, he said. But, he added, there is no easy solution.

"It's like balance reporting all over again," Mr. Curran said in an interview at the conference. Corporations wanted to receive electronic balance information from all of their banks, but complained when the information did not come in uniform formats.

Change Is Costly

It is costly for all banks to change their invoicing software to adhere to a common standard, Mr. Curran said. And that cost would eventually be passed on to a bank's customers.

Errors in a bank's favor, Mr. Curran said, are most likely offset by other errors made in a corporation's favor.

Mr. Rush urged corporations to build their own systems to help them analyze their bank invoices. Corporations may want to apply the National Corporate Cash Management Association's account-analysis standard to these systems, or they may develop their own formats. Either way, understanding the elements of a bank invoice can be a powerful tool for corporations when they renegotiate their bank relationships.

"Bank pricing is negotiable — it's very negotiable," Mr. Rush said. "And knowledge gives you negotiating power." ■

Correction

The Institute for International Economics is a private, nonpartisan research center organized for the study and discussion of international economic policy. It is supported by a number of private foundations. A Sept. 15 story ("Economist Urges More Debt Relief Deals," page 2) incorrectly identified the organization. ■

Citibank, Iowa Gather Support In Court Tests

By A. JOSEPH NEWMAN JR.

Friends of the court are beginning to choose sides in the court battle that pits Citibank (South Dakota) NA, of Sioux Falls, a unit of New York's Citicorp, against the Iowa attorney general in two cases testing the power of banks to export late fees and other credit card penalties beyond state lines.

Iowa is not challenging the bank's right to export home-state interest rates. That right has been upheld by the U.S. Supreme Court in 1978.

Since that decision did not mention fees and other charges, Iowa sued Citibank (South Dakota). Iowa claims that 10 fees for late payments and for paying bills with checks drawn on insufficient funds violated Iowa consumer-protection laws.

Citibank and others say such fees and charges are an integral part of the total interest rate structure.

So far, at least a half dozen friend-of-the-court briefs have been filed in support of the Citibank argument. They came from Visa International, MasterCard International, the Consumer Bankers Association, the Delaware Bankers Association, the Delaware banking commissioner, and the state of South Dakota.

Iowa expects up to six such briefs in its own favor, according to Peter Kochenburger, an attorney in the Consumer Protection Division of the Iowa Justice Department.

Among these briefs are a filing by the state of South Carolina, on behalf of its Department of Consumer Affairs, and a filing by the Association of Uniform Consumer Credit Code States. Steven W. Hamm, administrator of the South Carolina consumer affairs department, is president of the association.

Much Riding on Outcome

The two states filing briefs in behalf of Citibank — Delaware and South Dakota — have much at stake on the outcome of the litigation. Both have worked to attract out-of-state banks to set up units to issue credit cards and export rates and fees to consumers elsewhere, according to Francis X. Morris, executive vice president of the Delaware trade association.

Legislatures in Delaware and South Dakota, seeking to deflect suits like Iowa's, enacted laws earlier this year specifically defining credit card fees as part of the interest rate. Banking lawyers said they expect the dispute to be appealed to the U.S. Supreme Court, no matter which side prevails in the lower courts.

The question is: Do states or the federal government define interest rates? The briefs supporting Citibank were filed in federal court in Des Moines, where Citibank (South Dakota) is suing the Iowa attorney general, Thomas J. Miller.

Oral arguments are expected early next year, according to Mr. Kochenburger. Iowa originally sued Citibank in state court in Des Moines, and that case is also in litigation.

Similar litigation is pending in state and federal courts in Des Moines against United Missouri Bank of Kansas City and United Missouri Bank USA of Delaware, both units of United Missouri Bancshares Inc., Kansas City.

Iowa had also filed a fee-export suit against a Delaware company, the First National Bank of Wilmington unit of Commercial Credit Co. That suit was settled out of court. ■

MARKETING MANAGEMENT /COMMENTARY

It May Be Time to Quit the Credit Card Wars

By BARRY I. DEUTSCHE

NOT long ago, I got a letter from Jerome Silverbush, whom I haven't seen since we sat next to each other at P.S. 128, which is a Brooklyn-based institution of less than higher learning. The letter told me that I was now eligible for a brand-new Visa card, and if I sent for it the P.S. 128 Alumni Fund would benefit.

This letter was a milestone of sorts for me. Now I have received a credit card offer from every group that I remember being a part of, every airline I've ever flown on, and every religious, political, or special interest organization with which I've ever had a moment of sympathy.

Jerry's letter also told me that the P.S. 128 card is sponsored by a bank I'll dub First National Neighbors Bank. First Neighbors happens to be my bank, so I filled in the application and took it down to my local branch on my next visit.

I took it to the desk that was labeled Personal Banking Counselor. The counselor stood up, said hello, called me by as close an approximation of my name as he could manage, and offered me a seat. He looked at the application and said, "Gee, we don't handle these. You have to mail them in."

Deutsche Says:

'The card companies are keeping a lot of smaller players in a game in which there is no large-scale payoff available.'

"Why?" I asked. "It has your bank's name on it. This is an office of the bank, isn't it?"

"Well, you see, the credit card people are in Delaware, and we're not allowed to handle their stuff. And anyway, it's really not our card. Large City National issues it for us. We don't even take payments; you have to mail those in, too."

What this suggests is that the credit card business isn't what it used to be. It may have outpaced the ability of most banks to compete in it effectively or to manage it well. It even may be that it isn't necessary for your bank to include credit cards in its product line anymore.

The effects of advances in technology and in national marketing have created both economies of scale and, for a few, sustainable competitive advantage. Citibank's volume is now more than twice that of its nearest competitor, Chase, and among the restthe formation of an oligopoly is accelerating.

I don't know what share of the affinity card business belongs to MNBA, Maryland National Bank's credit card company, but I know it's considerable. And it is commonly believed that all the good groups are now taken.

Costly Game of Catch-Up

What the domination of the few means for the many is a costly, risky, time-consuming process of catching up, with little real chance for success.

The business is not what it used to be in many other ways. Credit cards are now operated and marketed so as to not only *not* enhance a banking relationship, but in fact to be adverse to the relationship.

I've often wondered what would happen if, in a fit of zealous affinity, I applied for 15 cards issued by MBNA in order to support 15 organization, earn mileage credit, or whatever. Would I get one acceptance and 14 refusals? Would they negotiate a single credit limit and divide it among the 15 cards? Is the number 15 or is it much greater?

Lately, I'm leaning toward the opinion that it just may be that your bank would do well to leave the credit card field to those better able to cope with its complications. In the overall scheme of things, credit cards may not matter.

That view depends partially on the further thought that most consumers are not particularly loyal, or are overly conscious of the bank' name on their credit cards.

In fact, these days the bank name is likely to be hard to find, sometimes relegated to the fine print on the back of the card. On the front is always a Visa or MasterCard symbol and, increasingly, the name and artwork of a third-party sponsoring organization.

National marketing strategies have played a major role in breeding even wider gaps between the haves and the have-nots. We do business with names we know. The big marketing bucks, and with them the familiarity that is essential to sales, belong to the big players — Visa and MasterCard.

It's not First Neighbor's Visa you were told to take to the Olympics or First Granary's MasterCard that's going to give you clout or choice or whatever it gives these days. Citibank may be an exception, since it is in so many other realms of endeavor. But even despite Citibank's prominent advertising, Visa and MasterCard recognize no first names, and the only surname they ever use is Gold.

As if scale and reach weren't enough to create a problem for the small players, a new geography game has been devised to further complicate their lives. Many of the banks large enough to enter the lists have also moved their card operations away from their home base — usually to another state in search of a higher rate — and most are now issuing cards well beyond the normal reach of their traditional retail banking operation.

The affinity card has helped with this and so has the public's indifference as to which bank issues the card.

Good-Bye to the Good Old Days

In the old days, credit card competition was a natural extension of bank competition. Banks chose one side or the other. BankAmericard or Master Charge, as they were known in the early days, and championed the side in their local markets. In some markets, Pittsburgh for example, the marketing battles were epic.

The battlefield shifted when the dual issuance arose, and except for those few banks where the credit card executive had stronger than average old-boy network ties to one or the other of the national brands, everyone began offering both. The competitive differences between brands of credit card became meaningless and so did the card's usefulness in terms of local competition.

By that time, however, the two card groups, formerly not much more than industry associations, had become entities unto themselves, complete with high-profile chief executives, generous national marketing budgets, and staff levels to match. They could not let their brands die.

The card companies are keeping a lot of smaller players in a game in which there is no large-scale payoff available. Their primary strategy is fear — they have jointly created the *betes noires* of Optima and Discover and convinced us bankers that only the issuance of our own credit cards will save us from Sears and American Express.

Don't think it's a day at the beach for the larger players, by the way. There are burdens that accompany scale. Size breeds impersonality and discourages concern for the individual customer. Distance creates barriers that work against an ability to intercede on behalf of a valued customer. And for some, the problem is exacerbated when the processing center not only is in another state, but belongs to another bank.

As well-funded direct-marketing campaigns continue to affect the outcome, more banks are realizing they cannot operate profitably while the size advantages are held by a few. But because of the fear that if they don't offer the service they will lose customers, they sign up to distribute another bank's credit card.

Some banks have been doing this from the beginning, but more and

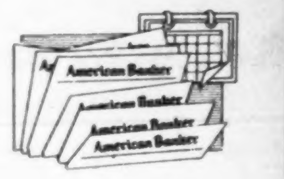
FLASHBACKS

What made news in the *American Banker* this week...



40 Years Ago

- J. Melville Broughton, a Senate candidate, former governor of North Carolina, and a director of the Wachovia Bank and Trust Co., told the closing session of the Consumer Bankers Association that bankers must face the future with hope and confidence because banking is based on faith and credit. Citing the "pessimism and cynicism over the world, which sees only another world war and destruction of everything," Mr. Broughton said he believed that "somehow, in the providence of God, we are not going to have a third world war, but instead, a new world in which the instruments of destruction will be sources of hope and abundance for everyone, and the light of a new day."
- G. Rowland Collins, dean of the graduate school of business administration at New York University, cited in a speech to members of the banking industry several "pestilent notions" that he claimed were undermining the U.S. economy. One of them, the 40-hour work week, "was born out of a Depression psychology and a desire to spread work," he said. "There has been, and is, a very real question whether the domestic economy can be maintained on 40 hours of work per week."

20 Years Ago

- For the first time since 1965, the number of banks in the United States increased. At the end of June, there were 14,242 banks, 12 more than at yearend 1967, reversing the trend that had begun at yearend 1965 when there were 14,273 banks in the country.
- Chemical Bank New York Trust Co. said it would form a one-bank holding company, list the shares on the New York Stock Exchange, rename itself Chemical Bank, and retain its state charter "for the time being."

10 Years Ago

- The federal government announced a program to provide minority-owned banks with assistance in development and capital support, Comptroller of the Currency John G. Heimann told the National Bankers Association. Stating that the survival of some minority banks might be at stake, Mr. Heimann said the program would be funded over a three- to five-year period through the Small Business Administration.

5 Years Ago

- The Federal Home Loan Bank Board approved extensive changes in the focus and timing of thrift financial reports. The approved regulation shifted the emphasis of the reports to providing information on interest rates paid and received by thrifts, and away from credit risk.
- High-level disagreement over how to streamline the financial regulatory system was jeopardizing the progress of a White House task force, headed by Vice President George Bush, that was studying possible changes. Most agencies were unhappy and some entirely unwilling to relinquish existing regulatory powers, sources said.

1 Year Ago

- BankAmerica Corp. posted its first operating profit in five consecutive quarters — $54 million, or 25 cents a share.
- A man who apparently suffered heavy losses in the stock market crash walked into a Merrill Lynch & Co. office in Miami and opened fire, killing a vice president and wounding another before he killed himself.
- The Senate Banking Committee planned to ask to Comptroller of the Currency for information on First Options of Chicago Inc., a subsidiary of Continental Illinois National Bank and Trust Company of Chicago that needed a loan from Continental Illinois Corp. during the stock market crash. The corporation's funding was of concern to opponents of new bank powers.

Fed Adopts New Service Fees Aimed at Widening Profit Margins

▸ Continued from Page 2

profits, it also expects the highest recovery rate in 1989 — 104%.

In its report to the Board of Governors, the Fed staff cautioned that the wide profit margin should not be accepted literally.

"The 1989 recovery rate may be optimistic because costs for check services may be higher than anticipated as a result of the impact of the Expedited Funds Availability Act and Regulation CC on reserve bank operations," the report said.

Special-project expenses alone, which are aimed at having "a major beneficial effect on the payments mechanism," would reduce the overall recovery rate to 102.3% in 1989, the Fed said. This would compare with 100.2% if calculated on the same basis for this year.

On the other hand, automated clearing house volumes rose 29% in the first eight months of 1988, compared with the 24% that the Fed budgeted for, which could make revenue projections in this area seem conservative.

Despite the projected bottom-line improvements, the Fed characterized its pricing changes for 1989 as minor. Fees are being increased most for labor-intensive services, to encourage automation.

For example, the Fed will impose a fee of $1 for notifications of change on automated clearing house items, but only when those notifications are submitted on paper. Meanwhile, surcharges are being reduced on some items transmitted during the automated clearing house night cycle.

In wire transfers, the Fed will increase the fee for telephone advices to $4 from $3.50, while the basic charge to originate or receive a payment will rise three cents to 50 cents.

The Fed anticipates a decline in revenue and transaction volume in its definitive safekeeping and noncash collection business despite some of its most aggressive price increases. Volume of book-entry securities, on the other hand, is expected to rise 8.3%, producing a 102.5% recovery rate in 1989 compared with 96.6% this year. ■

Federal Reserve Prices and Profits

1988 and 1989 estimates, before special-project costs (dollar amounts in millions)

Service Category	1988 Cost	1988 Revenue	Profit Margin[1]	1989 Cost	1989 Revenue	Profit Margin[1]
Automated clearing house	$42.2	$41.9	(0.8%)	$46.9	$47.1	0.5%
Book-entry securities	9.1	8.8	(3.4%)	9.7	9.9	2.5%

ABA Subcommittee Is Designated to Represent Bond Trustees

By LYNN STEVENS
The Bond Buyer

WASHINGTON — A subcommittee of the American Bankers Association has won the endorsement of municipal bond trustees to represent them nationally, with top priority being the development of industry standards.

About 20 ABA officials and trustees agreed here last week that the ABA's corporate trust subcommittee should represent the municipal trustees to address growing concerns about the adequacy of bond trustee protection for investors.

Trustees from western regional groups had pushed the idea of forming a new association to represent them. But they were persuaded by ABA officials to rely on its existing corporate trust subcommittee, which the ABA said has been addressing such issues.

The development of industry standards, which would serve as voluntary guidelines for trustees' day-to-day operations, was one of three recommended goals for the subcommittee, participants at the meeting said.

The other recommendations were to improve communication among trustee groups and increase education and training of trustees.

The subcommittee plans to seek approval of the recommendations when its parent committee, the fiduciary and securities operations division executive committee, meets here Nov. 16-18.

The recommendation to develop industry standards comes as industry groups, such as the Bond Investors Association, have proposed legislation that would require trustees to develop uniform standards. The legislation would require trustees to warn investors and potential investors whenever an issuer fails to make a payment to the bond's reserve or escrow fund.

Bond trustees have come under increased scrutiny ever since the Washington Public Power Supply System bonds defaulted, creating financial losses for thousands of investors. The default and subsequent litigation raised questions about whether trustees should be required to notify investors of an impending default or help recover funds for bondholders after a bond default.

"There was a consensus that the issue of industry standards is important and one that should be given serious consideration," said Ed McCartney, vice president and manager of the corporate trust services division of the First National Bank of Chicago. Mr. McCartney is also chairman of the ABA's fiduciary and securities committee.

"But what those standards will be, how extensive and detailed they will be, has yet to be determined," he added.

The trustees urged the subcommittee to develop a corporate trust network with about 17 regional trust groups that have been formed over the past few years.

"We'd like to tie the American Bankers Association's activities more closely to these organizations," Mr. McCartney said. "We'd like to consider having the regional groups undertake projects with the American Bankers Association acting as coordinator.

"One possibility would be to designate certain regional groups to draft certain portions of the industry standards."

Mr. McCartney added that the subcommittee could improve education of trustees by making available an existing corporate trust textbook, and trustees' training could be improved through the use of videotapes. ■

Dr. James Tobin to Get Award for Forecasting

NEW YORK — Dr. James Tobin, 1981 Nobel Prize recipient in Economic Science, will present Sterling National Bank & Trust Company of New York's annual economic forecasting award on Nov. 15.

The winner, to be announced on that date, will present economic predictions for 1989.

The award was established in 1981 in honor of Sterling National's chairman, Theodore H. Silbert. It recognizes outstanding achievement in economic forecasting and encourages greater accuracy, professionalism, and timeliness in financial and economic forecasting.

Dr. Tobin is the John W. Sterling Professor of Economics at Yale University. He has been on the Yale faculty since 1950. ■
